

# CWCB Water Conservation Strategy

Office of Water Conservation and Drought Planning

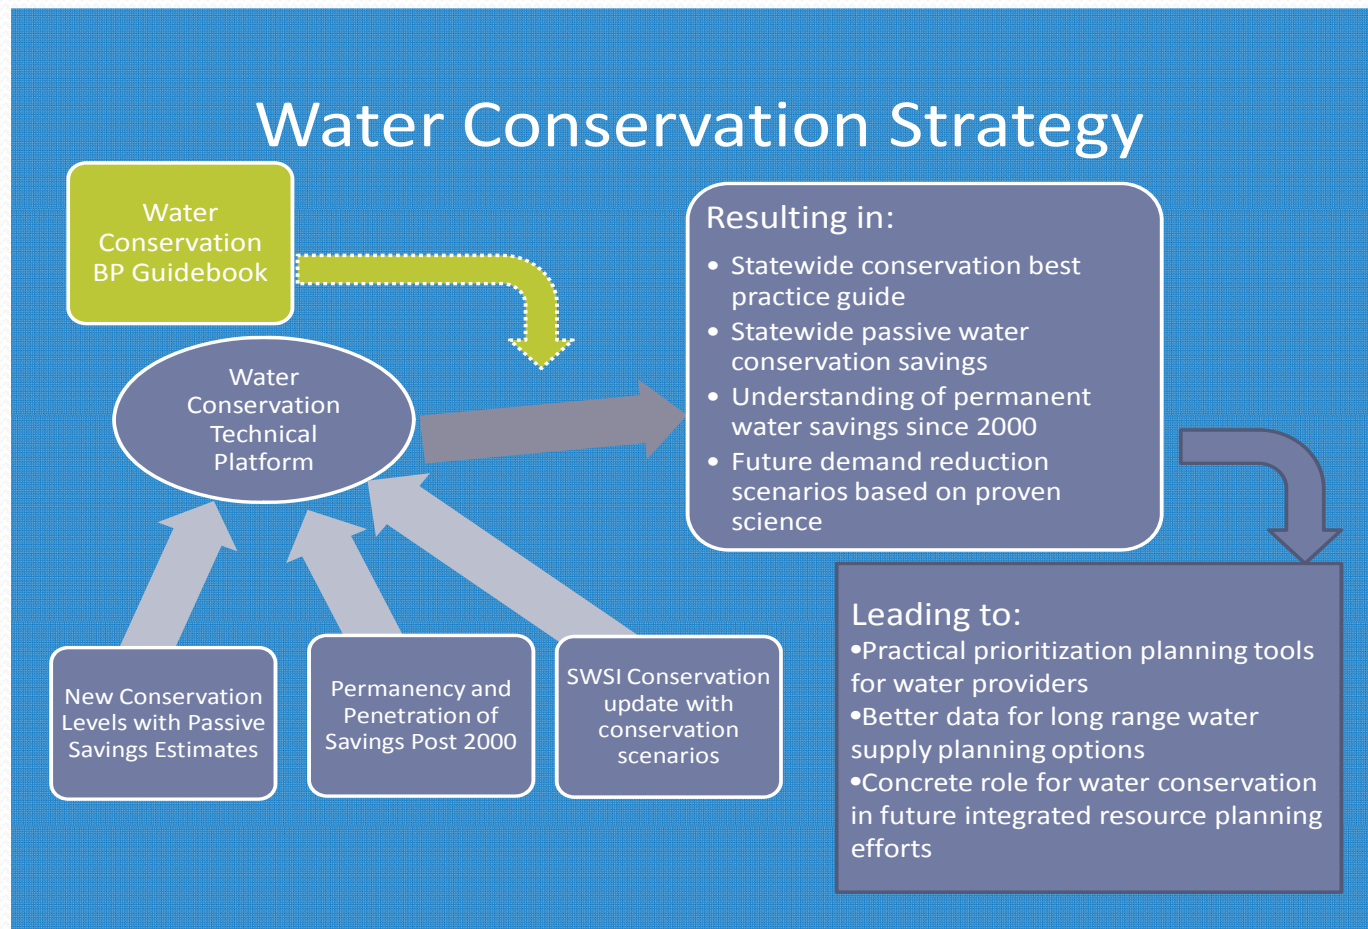

# Initial Questions

- What amounts of water can M&I conservation provide to meet our 2050 water needs?
  - How much water savings can be expected?
  - How much can be counted on as permanent?
  - When will these savings occur during the planning period?
  - How does water conservation integrate into overall water resource planning?
- What is the best array of conservation measures to achieve these demand reductions?

# Water Conservation Strategy

# Water Conservation Levels Analysis and Passive Savings

# Purpose of Levels Analysis

- To reassess the water conservation levels created in SWSI 1
- To assess present state of water conservation in Colorado
- Determine the amount of passive water Conservation savings possible through 2050

# Passive Savings Analyses

- Update Passive Savings Using
  - New Regulations that Will Impact Market
  - Colorado Housing Stock Information
  - New Data on Fixture/Appliance Replacement Rates
  - New Technologies
    - Toilets
    - Clothes Washers
    - Dishwashers

# Regulations Influencing Passive Savings

- Savings Related to Impact of Federal, State and Local Statutes and Ordinances
  - 1992 National Energy Policy Act  
(effective 1994/96)
  - 2002 California Energy Commission  
(effective 2007)
  - 2009 California Point of Sale Requirements  
(effective 2014)
- New and Old Construction

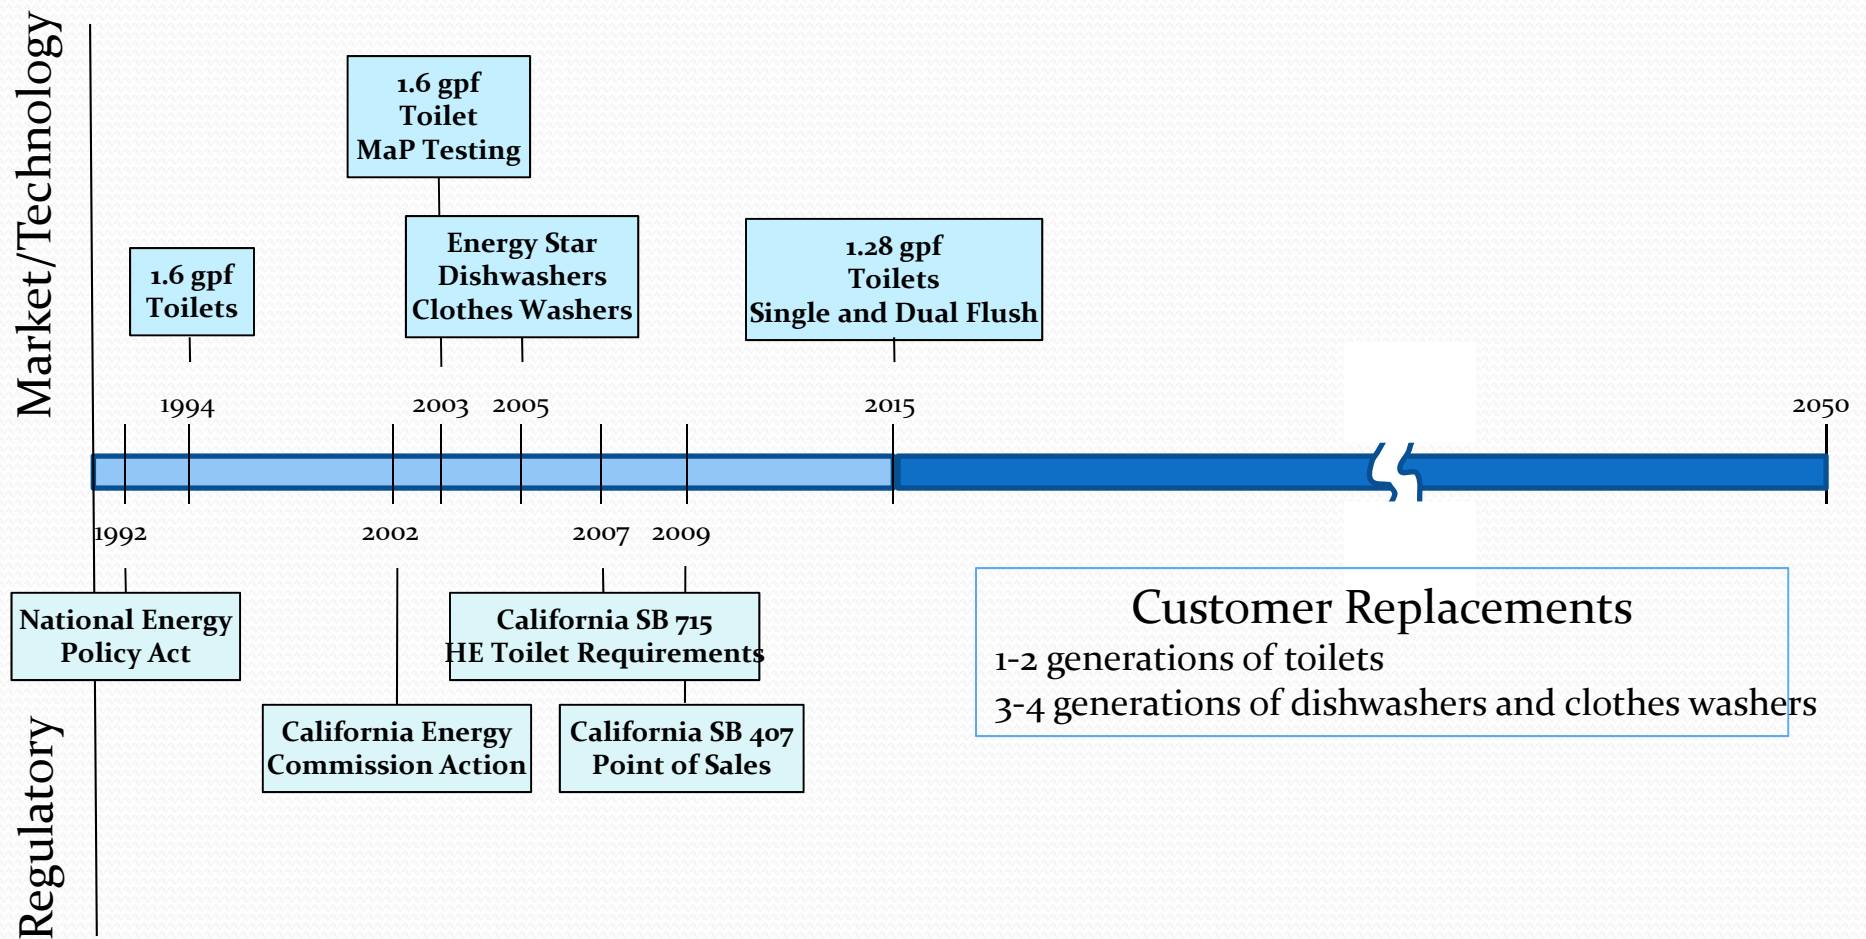

# Limitations

- Passive Savings Does Not Account Directly for:
  - Impact of tourist use (gpcd is for residents only)
  - Impact of new automatic sprinkler systems installed in existing homes
  - Future technical improvements in lower flow faucets, shower heads, etc.
- Ordinances for New Construction
  - 2020 20% of All Homes New
  - 2030 42% of All Homes New
  - 2050 80% of All Homes New

# Passive Savings Timeline

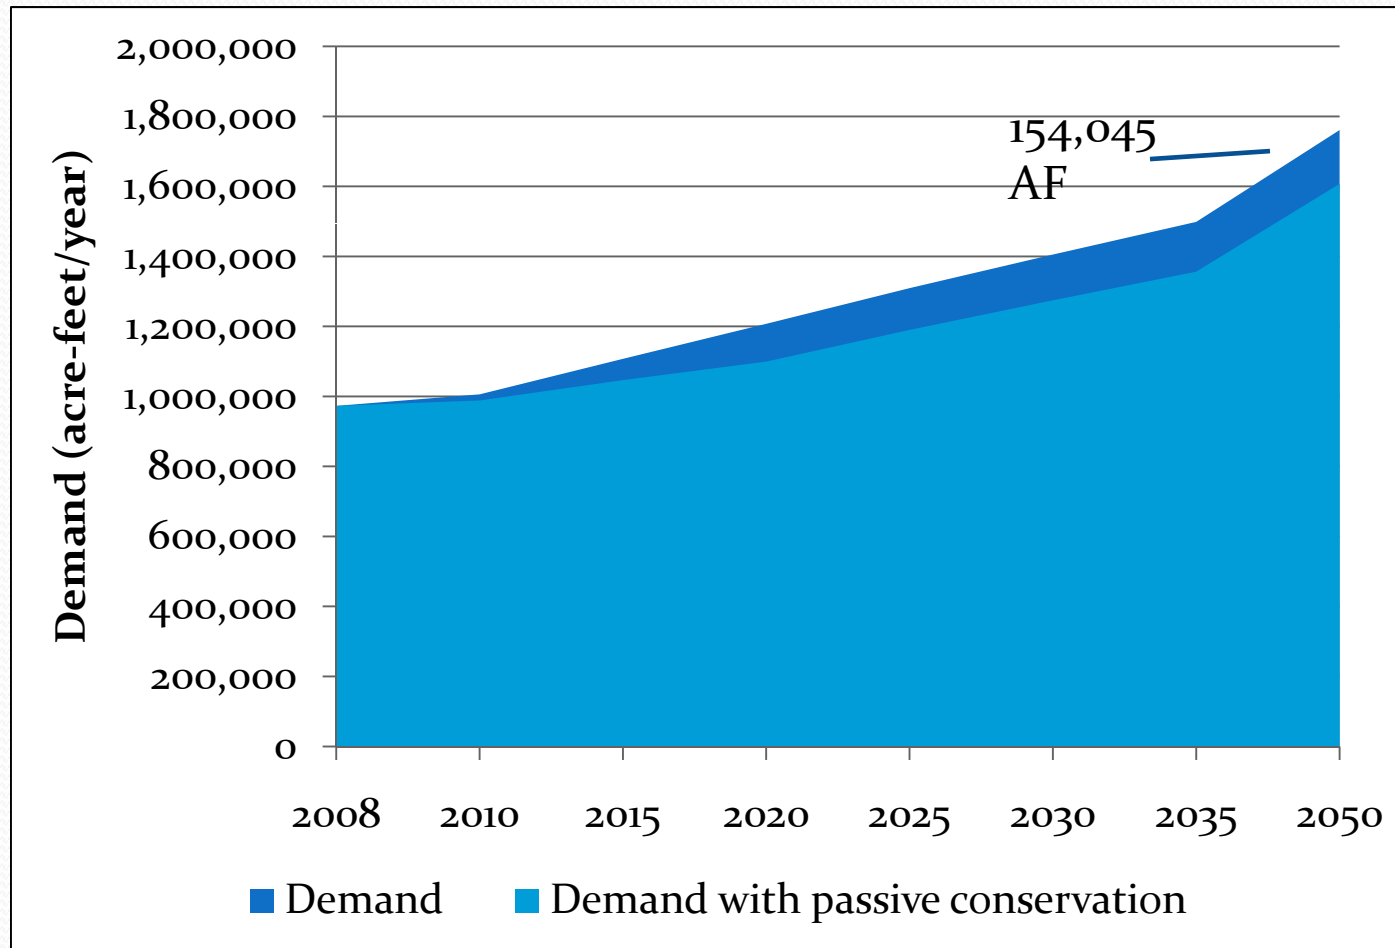

<sup>1</sup> Statewide totals have been rounded to three significant digits.

# Summary of AF Passive Savings

| Acre Feet Savings for Period 2008 to 2050 |                |                |
|---|----------------|----------------|
|   | Minimum        | Maximum        |
| Arkansas                                  | 19,000         | 28,400         |
| Colorado                                  | 6,600          | 10,000         |
| Dolores/San Juan                          | 2,200          | 3,300          |
| Gunnison                                  | 2,250          | 3,400          |
| North Platte                              | 30             | 40             |
| Rio Grande                                | 950            | 1,400          |
| South Platte                              | 76,000         | 106,000        |
| Yampa/White                               | 950            | 1,450          |
| <b>Statewide</b>                          | <b>102,500</b> | <b>154,000</b> |

# Effect of Passive Conservation on Future M&I Demand

# **Best Practices Guidebook for Municipal Water Conservation in Colorado**

# What Are Best Practices?

- BPs (AKA Best Management Practices) are water planning, management, and efficiency measures and policies designed to deliver proven water savings and improved water management.

# Purpose of Best Practice Guidebook

- A planning tool for improving and enhancing water efficiency in Colorado
- Provides detailed description of specific water conservation measures, program elements, regulations, policies, and procedures that can be implemented by Colorado water providers

# Four Categories of BPs

- Water System and Utility Best Practices
- Outdoor Landscape and Irrigation Best Practices
- Indoor Residential (single-family and multi-family) Best Practices
- Indoor Non-Residential Best Practices

# Attributes of BPs

- **Foundational** - essential for all utilities
- **Informational** – educate to foster conservation actions
- **Support** –technical information, data, and assistance
- **Management** - improved utility management procedures
- **Understanding** - improve knowledge and awareness
- **Operational** - conservation in everyday utility functions

# Best Practice Guidebook

| Measure   | Best Practice | Category or Sector Impacted |
|---|---------------|-----------------------------|
| Full metering   | BP 1          | ALL                         |
| Conservation oriented rates                               | BP 1          | ALL                         |
| Conservation oriented tap fees                            | BP 1          | ALL                         |
| Integrated resource planning, goal setting and monitoring | BP 2          | Utility                     |
| Water loss control  | BP 3          | Utility                     |
| Conservation coordinator                                  | BP 4          | ALL                         |
| Water waste ordinance                                     | BP 5          | ALL                         |
| Public information and education                          | BP 6          | ALL                         |

# Best Practice Guidebook

| Measure  | Best Practice | Category or Sector Impacted |
|--|---------------|-----------------------------|
| Landscape water budgets  | BP 7          | Outdoor irrigation          |
| Rules and regulations for landscape design and installation                                    | BP 8          | Outdoor irrigation          |
| Certification of landscape professionals   | BP 8          | Outdoor irrigation          |
| Water efficient design, installation and maintenance practices for new and existing landscapes | BP 9          | Outdoor irrigation          |
| Irrigation efficiency evaluations  | BP 10         | Outdoor irrigation          |

# Best Practice Guidebook

| Measure  | Best Practice | Category or Sector Impacted |
|--|---------------|-----------------------------|
| Rules for new construction (residential and non-residential)                       | BP 11         | ALL                         |
| High efficiency fixtures and appliances-Residential                                | BP 12         | Residential                 |
| High efficiency fixtures and appliances-Non Residential                            | BP 12         | CII                         |
| Residential water surveys and evaluations, targeted at high demand customers       | BP 13         | Residential                 |
| Specialized non-residential surveys, audits, and equipment efficiency improvements | BP 14         | CII                         |

# Best Practice Guidebook Outreach

- Finish review and finalize guidebook
- Graphical design and creation of summary guide
- Three stakeholder workshops
  - Glenwood Springs, Aug. 26
  - Pueblo, Sept. 30
  - Westminster, Oct. 21
- Publication and distribution of Guidebook and Summary

The background is a solid blue gradient. At the top, there are several wavy, horizontal lines in shades of light blue and cyan, creating a sense of movement or water. The main title is centered in the middle of the page.

# 2010 SWSI Update

Water Conservation Section

# Project Goal

To update the conservation section of the Statewide Water Supply Initiative (SWSI) report for 2010.

# Project Focus

1. Update info on current state of water conservation in Colorado
2. Determine conservation savings estimates and penetration rate analysis
3. Develop alternative water conservation strategies using savings estimates from Best Practice guide and passive savings analysis

# Inputs

- Recent “conservation levels” and passive savings analysis by Great Western Institute
- Approved and pending conservation plans
- Current demand levels from *2050 Demands Report*
- WaterSense specification
- 2010 Colorado Legislation
- National plumbing codes

## Update Conservation Savings Estimates and Penetration Rate Analysis from SWSI 2.

- Review, update, and improve SWSI 2 conservation analysis
- Prepare revised conservation savings potential
- Use CWW Best Practices Guidebook as framework

# Comparison of SWSI Forecasts

**DRAFT**

| Project   | Level             | 2030 Projections     |                     |           | 2050 Projections     |                     |           |
|-----------|-------------------|----------------------|---------------------|-----------|----------------------|---------------------|-----------|
|           |                   | Baseline Demand (AF) | Volume Savings (AF) | % Savings | Baseline Demand (AF) | Volume Savings (AF) | % Savings |
| SWSI 1    | Level 1 (Passive) | 1,926,798            | 101,900             | 5%        | NA                   |                     |           |

|           | Level 3           |                      | 272,852             | 14%       | NA                   |                     |           |
|           | Level 4           |                      | 443,385             | 23%       | NA                   |                     |           |
|           | Level 5           |                      | 699,183             | 36%       | NA                   |                     |           |
| SWSI 2    | Low               | 1,925,000            | 287,000             | 15%       | NA                   |                     |           |
|           | Mid               |                      | 372,000             | 19%       | NA                   |                     |           |
|           | High              |                      | 459,000             | 24%       | NA                   |                     |           |
| 2010 SWSI | Low               | 1,275,050            | 47,202              | 4%        | 1,607,564            | 157,381             | 10%       |
|           | Medium            |                      | 138,572             | 11%       |                      | 340,116             | 21%       |
|           | High              |                      | 229,275             | 18%       |                      | 521,522             | 32%       |

# Develop Water Conservation Strategies

- ID current M&I savings
- Assess current conservation level and 2050 potential
- Prepare conservation savings strategies
- Prepare M&I conservation strategy conclusions

## Three 2050 Demand Scenarios

- Low, Medium, and High level of conservation
- Clear explanation of conservation measures that reduce demands from 2008 to 2050
- Discussion of inherent uncertainty in demand forecasting
- **Methodological transparency** (enabling quick updates when new information becomes available such as penetration rate data)

**Low Water Saving Strategy  
Passive and Active Savings at 2050**

**DRAFT**

## Medium Water Saving Strategy Passive and Active Savings at 2050

**DRAFT**

## Medium Water Saving Strategy

## High Water Saving Strategy Passive and Active Savings at 2050

**DRAFT**

## High Water Saving Strategy

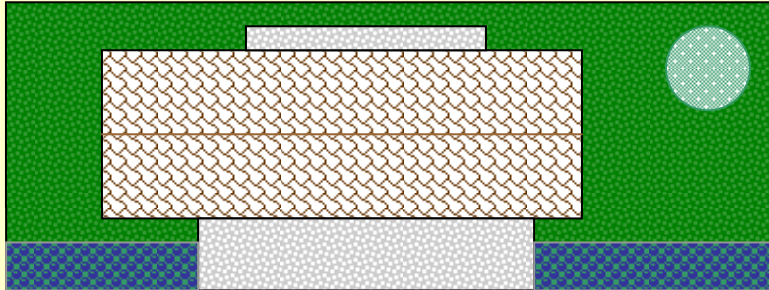

# Landscape Demand Reduction Examples

- Residential reductions:
  - 15% - low
  - 22% - medium
  - 30% - high
- Non-Residential reductions:
  - 15% - low
  - 30% - medium
  - 40% - high
- Many ways to accomplish savings (increased efficiency, alternative plantings, hardscape)

## Residential Property – Traditional Landscape

Baseline

|                      | Area          | Gal/SF      | Gal/Yr         |
|----------------------|---------------|-------------|----------------|
| Non-irrigated        | 5,000         | 0           | 0              |
| Turf                 | 3,500         | 24          | 84,068         |
| Trees and Shrubs     | 500           | 8.1         | 4,033          |
| Traditional Planting | 1,000         | 12.2        | 12,228         |
| WaterWise            | 0             | 3.9         | 0              |
| <b>Total</b>         | <b>10,000</b> | <b>20.1</b> | <b>100,330</b> |

Turf = Bluegrass  
 Planting = Traditional  
 Irrigation = Spray w/ good efficiency  
 Turf to Planting Ratio = 1.0:0.43

## Residential Property – Low Savings Strategy

15% Reduction

|                      | Area          | Gal/SF      | Gal/Yr        |
|----------------------|---------------|-------------|---------------|
| Non-irrigated        | 5,000         | 0           | 0             |
| Turf                 | 2,700         | 24.0        | 64,853        |
| Trees and Shrubs     | 700           | 8.1         | 8,560         |
| Traditional Planting | 1,300         | 12.2        | 10,487        |
| WaterWise            | 300           | 3.9         | 1,171         |
| <b>Total</b>         | <b>10,000</b> | <b>17.0</b> | <b>85,071</b> |

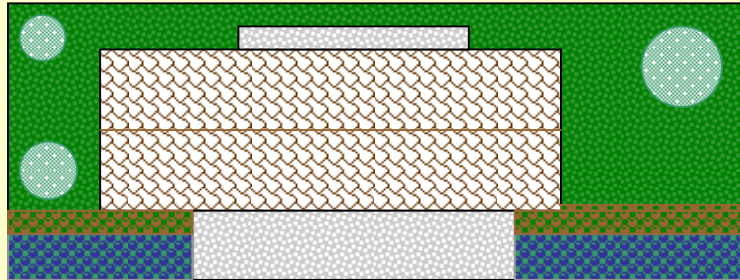

Source: EPA WaterSense Water Budget Water Calculator

Turf = Bluegrass  
 Planting = Mixed  
 Irrigation = Spray & micro-spray w/ good efficiency  
 Turf to Planting Ratio = 1.0:0.9

## Residential Property – Medium Savings Strategy

22% Reduction

|                  | Area   | Gal/SF | Gal/Yr |
|------------------|--------|--------|--------|
| Non-irrigated    | 5,000  | 0      | 0      |
| Turf             | 2,300  | 24     | 55,245 |
| Trees and Shrubs | 1,000  | 12.2   | 12,228 |
| Mixed Planting   | 1,000  | 8.1    | 8,067  |
| WaterWise        | 700    | 3.9    | 2,733  |
| Total            | 10,000 | 15.7   | 78,273 |

# Water Conservation Strategies and Demand Levels

DRAFT

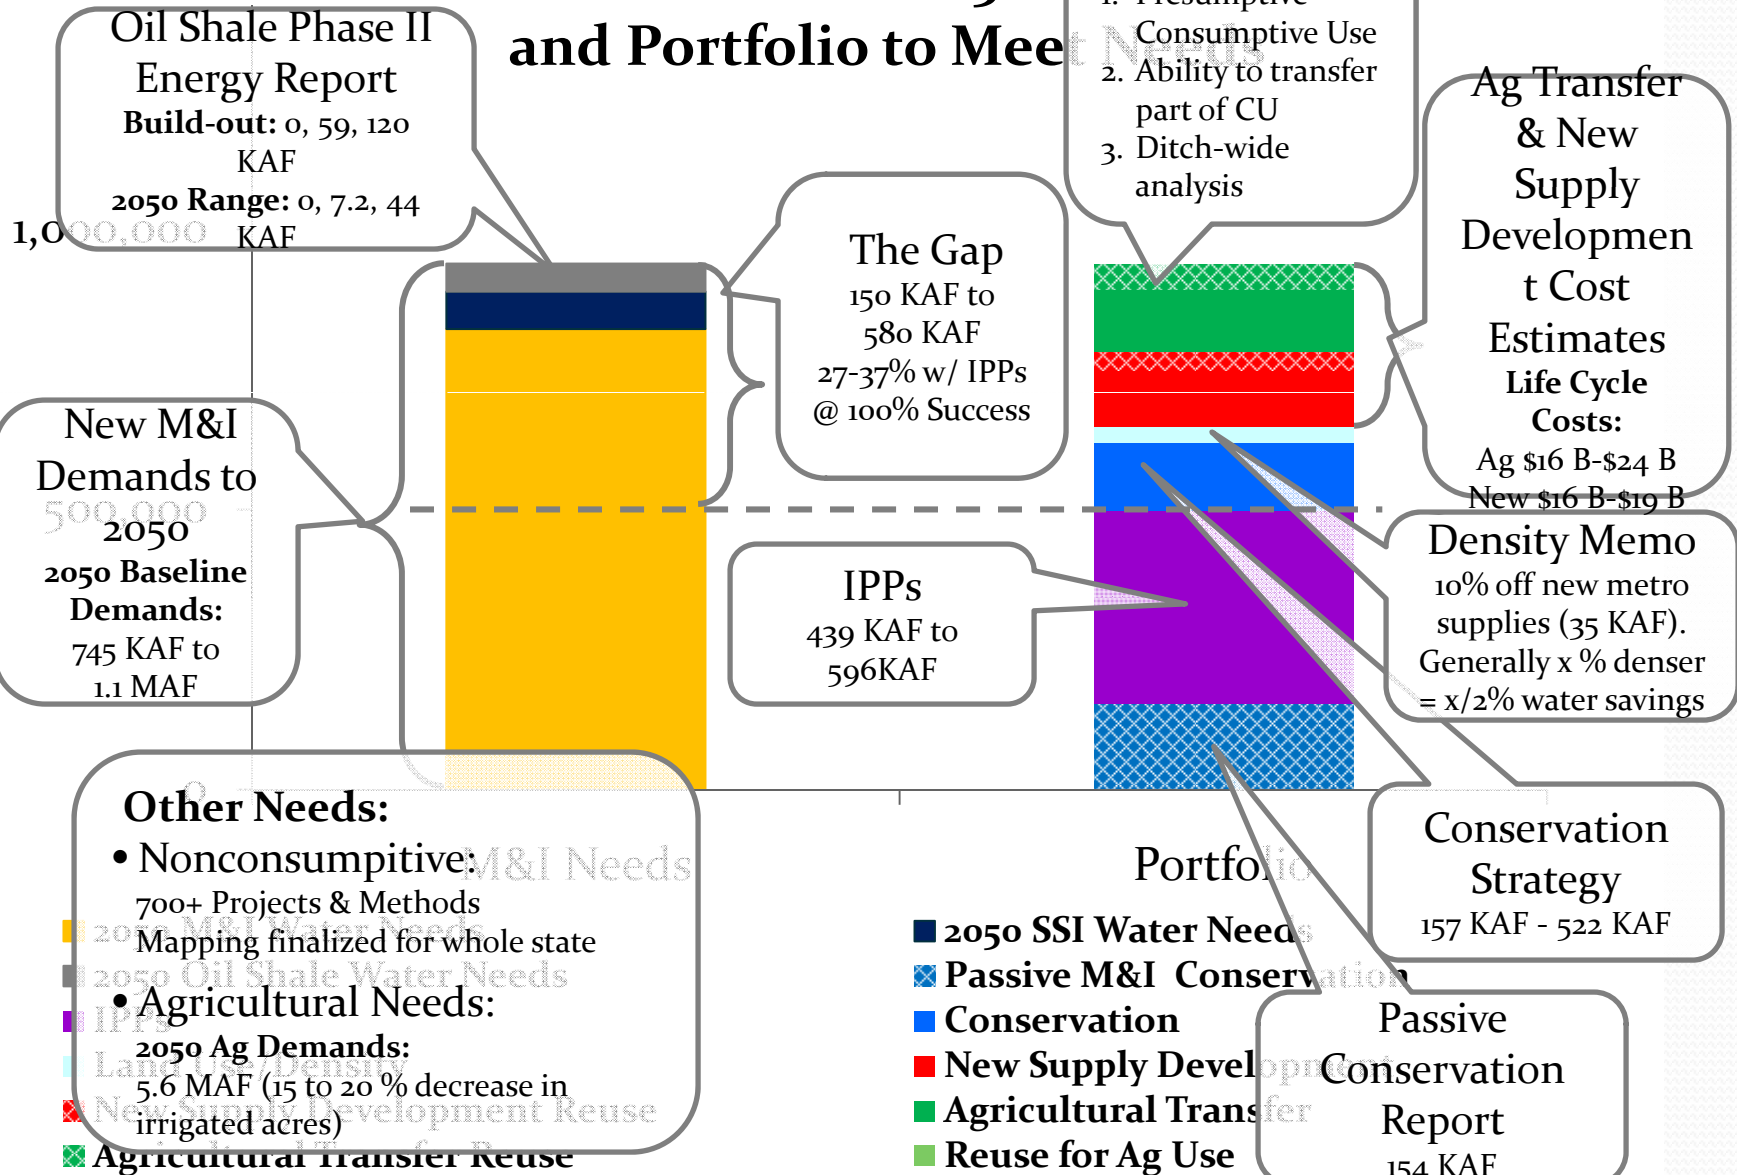

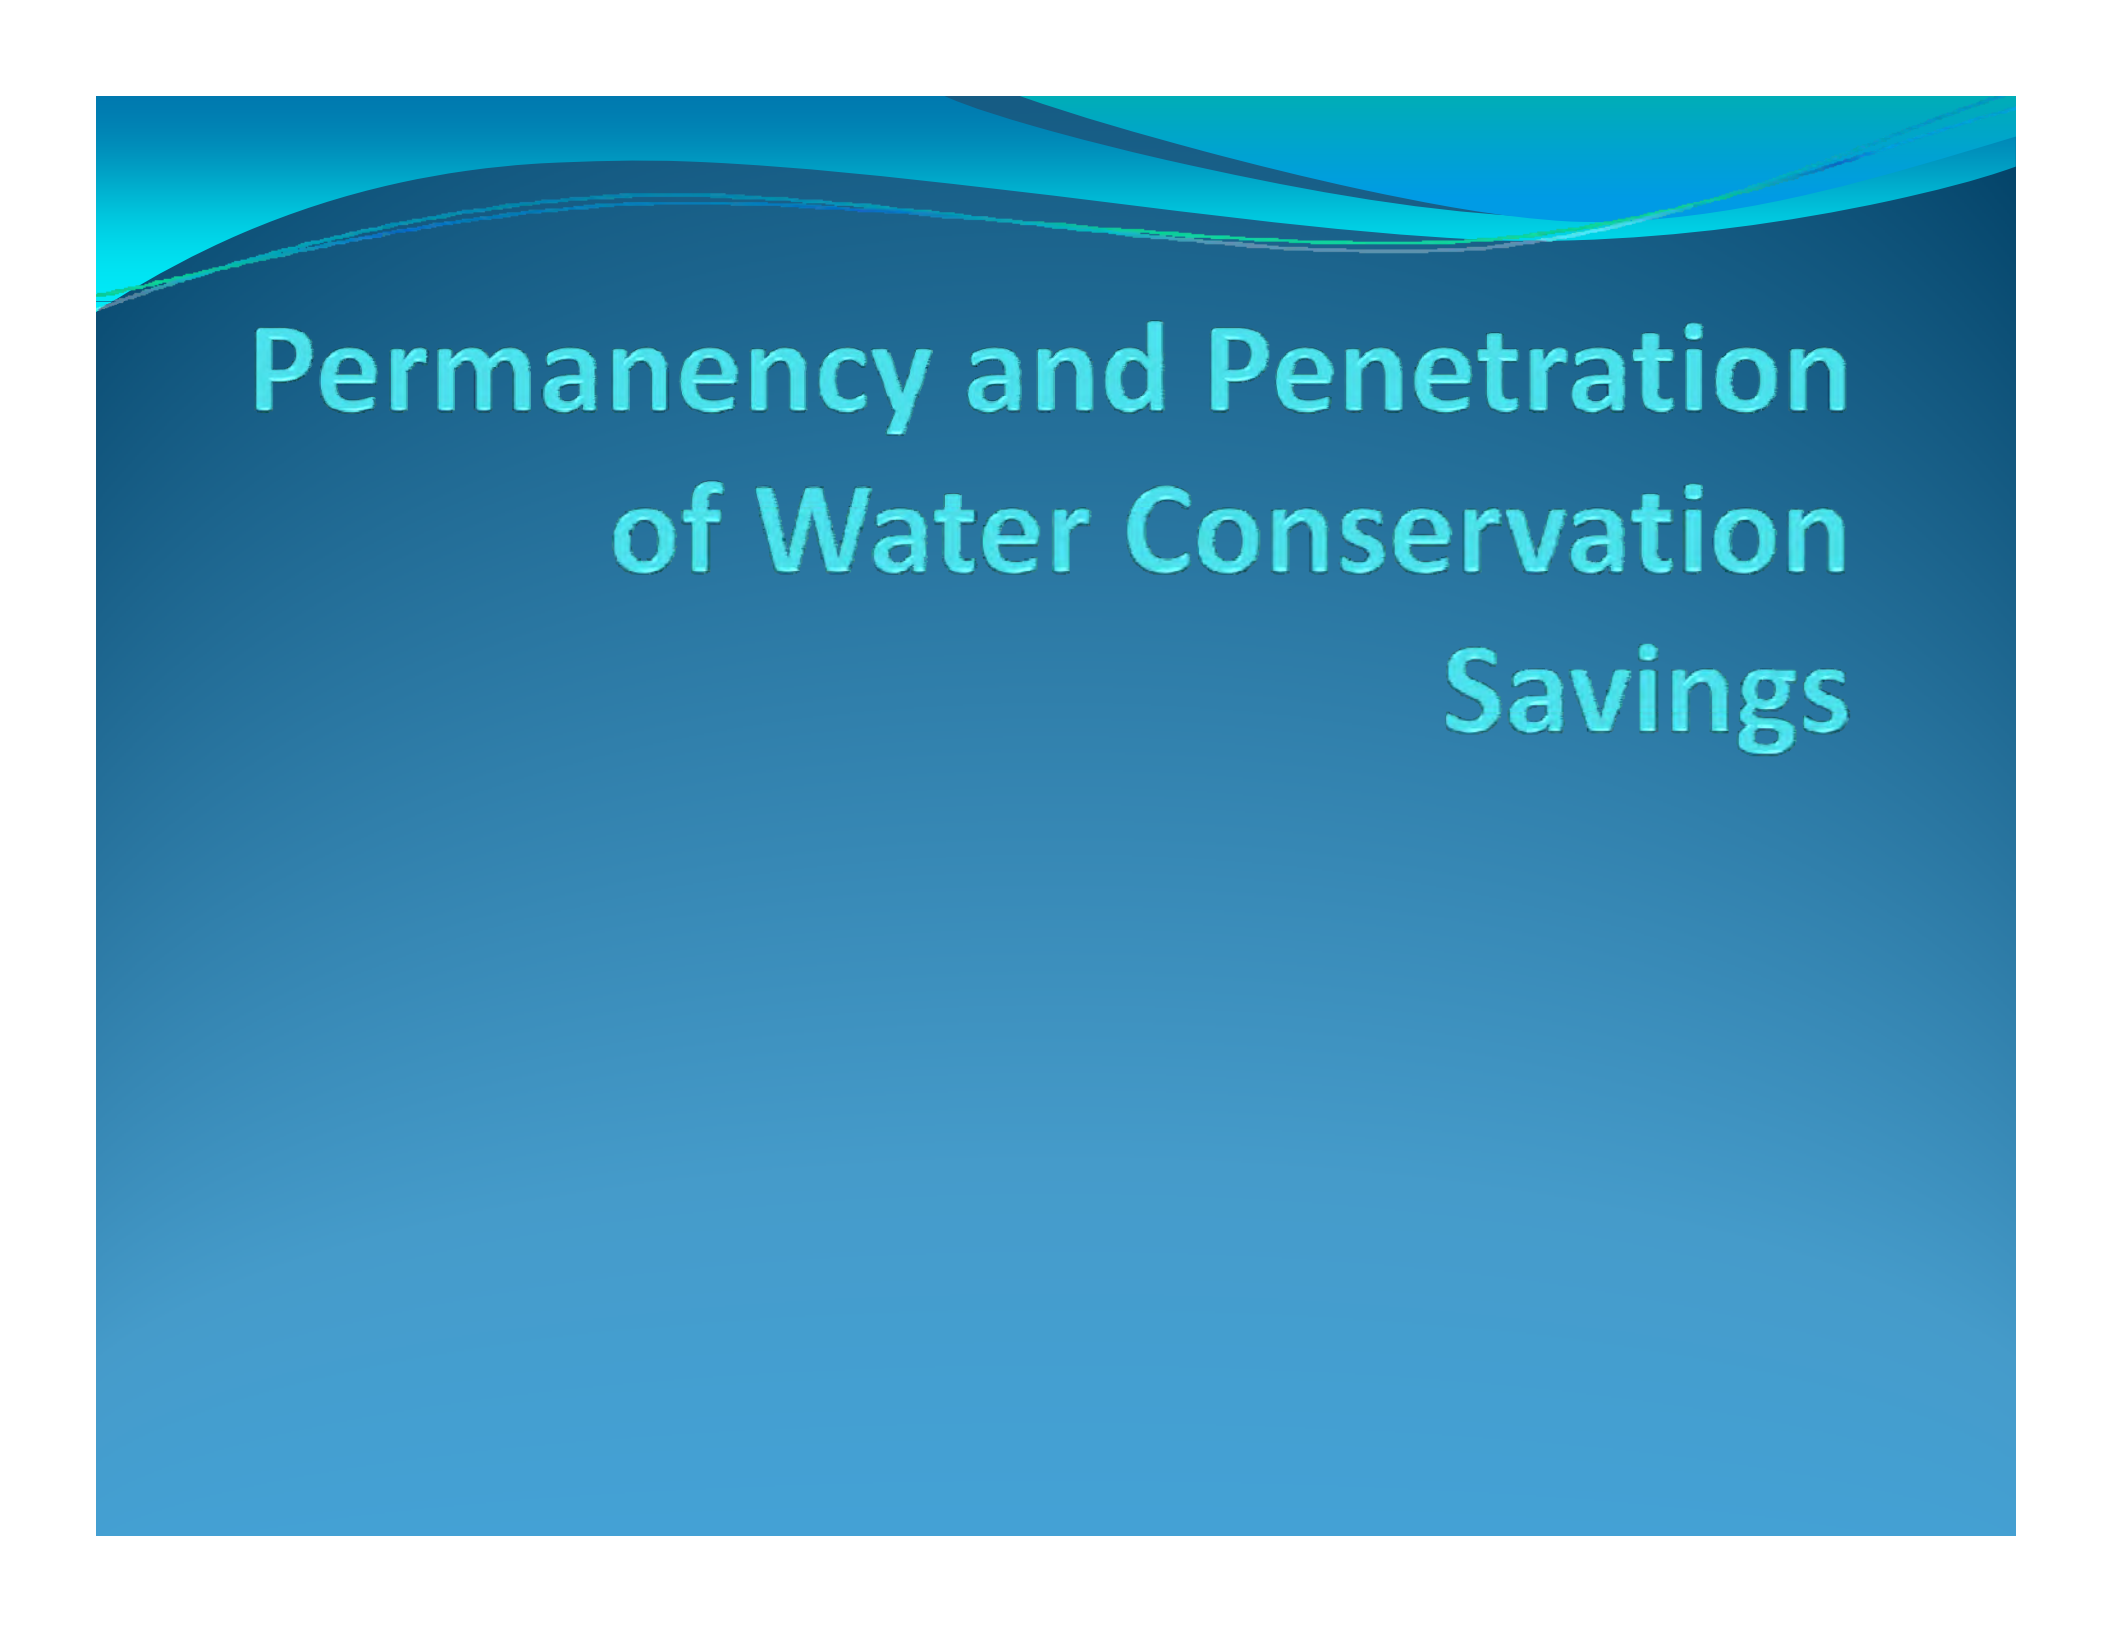

# Reports in the M&I Context

## State of Colorado 2050 M&I Needs and Portfolio to Meet Them

Acre-Feet/Year

# Permanency and Penetration of Water Conservation Savings

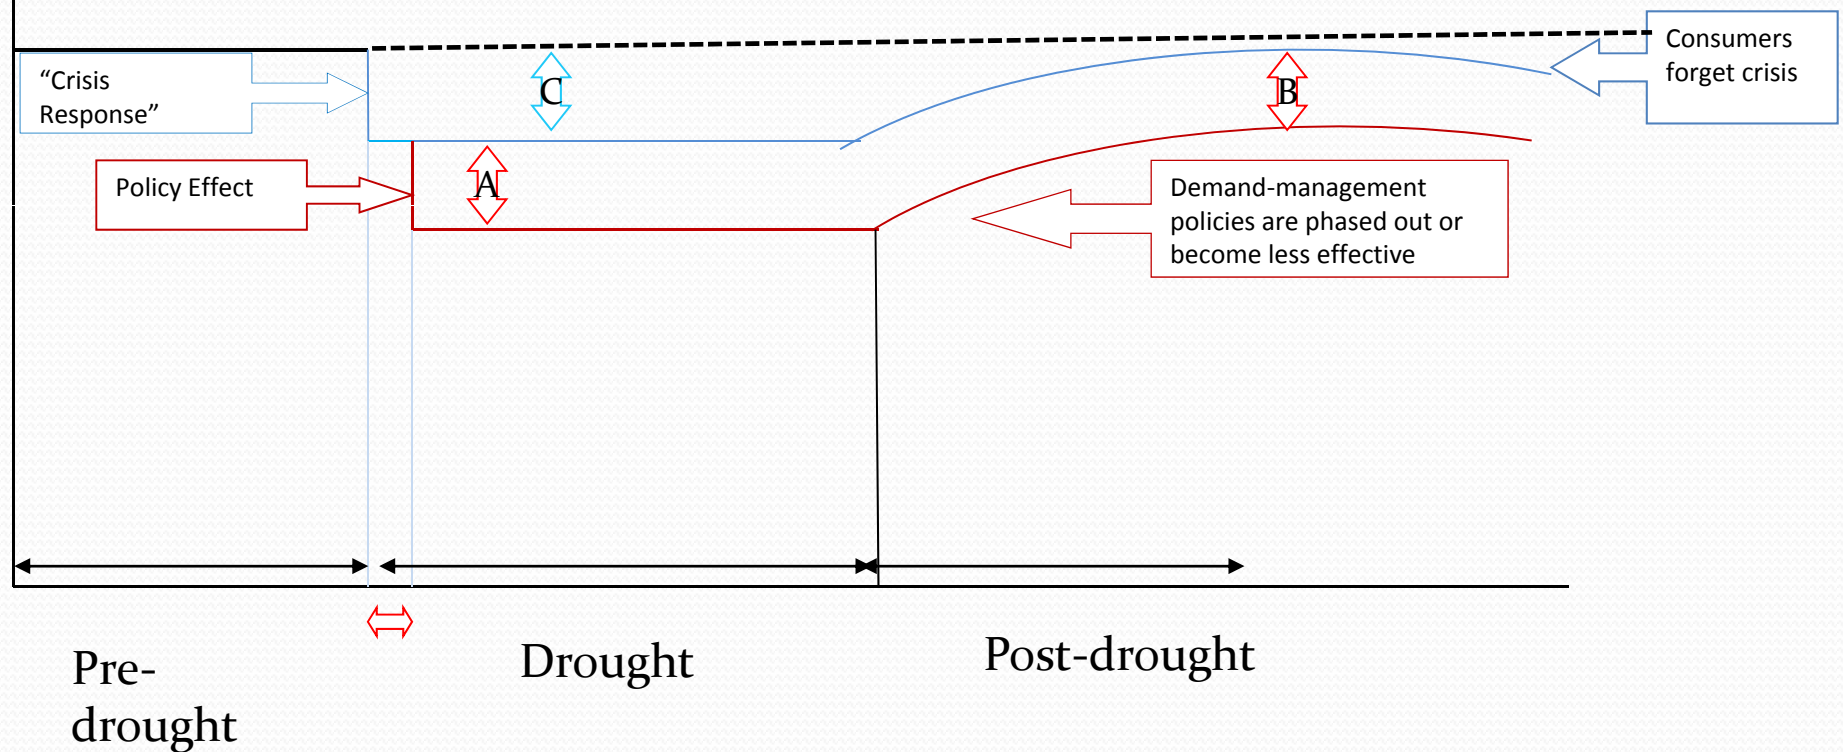

# Permanency and Penetration

- Assess the **feasibility** of future research into the permanency and penetration rates of water conservation savings and measures
- To assess what barriers and opportunities exist at the provider level in order to carry out future conservation savings potential and penetration rates research
- Working with a subset of the partner utilities, this project will also include a demonstration of the statistical analysis that can be done with existing information.

# Model for Study Approach

$A+C$ ; initial change from pre drought demand
