

September 21, 2010

Overview and Purpose

 Provide a brief overview of major technical reports and their conclusions

- Discuss report schedule:
 - Timeframe for finalizing remaining components
 - Statewide Water Needs Assessment scheduled for January 2011
 - Basin-specific Reports 1st Quarter 2011
- Solicit feedback from roundtable

Reports in the M&I Context

List of Reports

- 2050 M&I Water Use Projections—final complete
- Energy Study Phase 2 Revised Water Use Scenarios Memo draft roundtable product complete; finalize in August
- M&I Gap Analysis draft scheduled for August
- Reconnaissance Level cost Estimates for Ag & New Supply Strategy Concepts—final complete
- Ag Demands/ Alternative Transfer Methods –
 draft complete; finalize in 2010 Statewide Water Needs Assessment (SNA)
- Nonconsumptive:
 - Watershed Flow Evaluation Tool Pilot Study
 final complete
 - NCNA Focus Mapping (Phase 1) final complete
 - NCNA Phase 2 draft complete; finalize in 2010 State Needs Assessment
- Conservation Products:
 - SWSI Conservation Levels Analysis final complete
 - Evaluation of Passive Savings final complete
 - Guidebook of Best Management Practices for Municipal Water Conservation in Colorado– final scheduled for August
 - M&I Conservation Strategies draft scheduled for September; finalize in 2010 SNA
 - Feasibility Study to Assess the Permanency & Penetration Rates of M&I Water Conservation draft scheduled for October; finalize in Dec. 2010
- Portfolios and Strategies draft scheduled for September
 - Density Memo draft completed and will be appendix for portfolios memo
- Final 2010 State Needs Assessment Report due January 2011 timeframe

Date: September 17, 2010

Subject: 2050 Municipal and Industrial Gap Analysis

The purpose of this technical memorandum is to update the Statewide Water Supply Initiative (SWSI) Projected 2030 Municipal and Industrial (M&I) and self-supplied industrial (SSI) "gap" analysis to 2050. Having an understanding of what the M&I gap is will help the Colorado Water Conservation Board (CWCB), Interbasin Compact Committee (IBCC), and Basin Roundtables focus on what portfolio of strategies are needed to fill the M&I gap.

Background

In SWSI, the CWCB worked with water providers and users, interest groups, organizations, and individuals throughout Colorado to identify solutions to address the state's future M&I and SSI demands. As part of the SWSI Phase 1 study, the CWCB:

- Cataloged and characterized specific water management solutions being contemplated around the state.
- Identified the amount of water, by basin and sub-basin, that would be produced by projects
 or processes that were expected to move forward in the future with a reasonable degree of
 certainty by 2030. These projects and processes were called Identified Projects and
 Processes (IPPs).
- Estimated the amount of water needed (the "gap" in supply) in each basin to meet 2030 needs, assuming each of the IPPs completely met its goals.
- Considered the potential implications if a portion of the IPPs were not successfully implemented.

DRAFT 2050 MI GAP MEMO REVISED 091710

M&I AND SSI GAP ANALYSIS

Components of M&I/SSI Gap Analysis

- 2050 M&I/SSI Demands
 - Assume high passive conservation
 - Calculate demand increase above current conditions (2008)

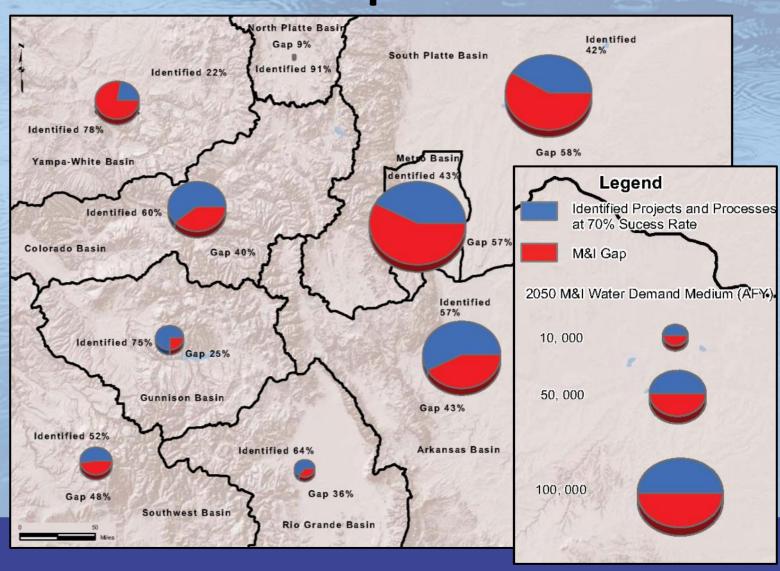

TER CONSERVATION OF COLOR OF C

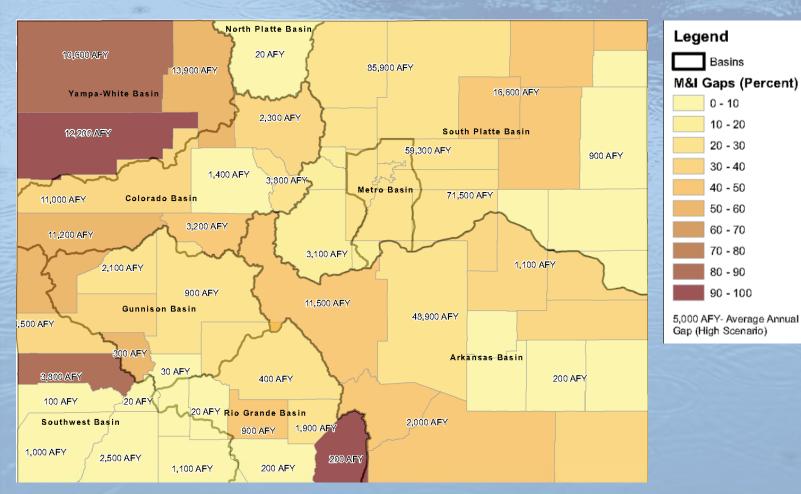

- Estimate yield of IPPs
 - Water provider interviews
 - SWSI Phase 1
 - NEPA project documentation
 - Other sources
- M&I/SSI Gap = Demand Increase IPPs

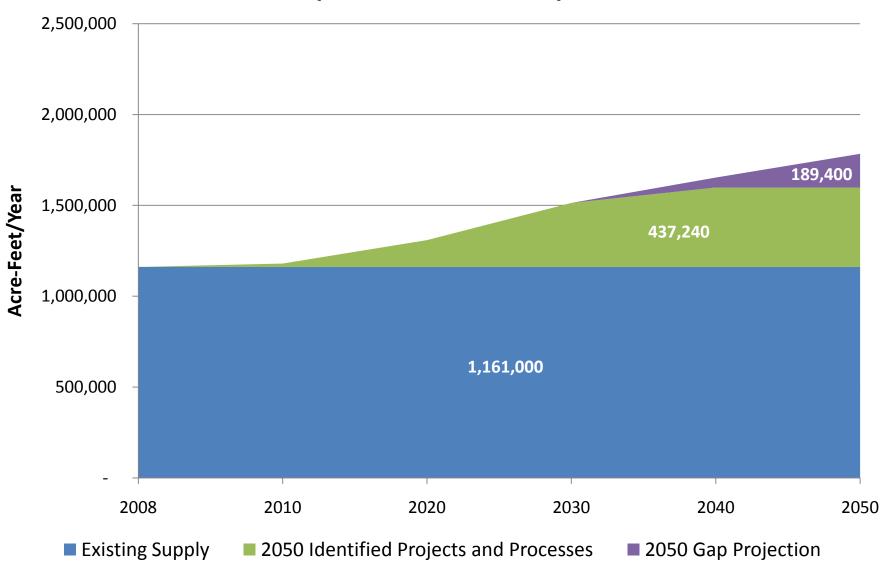

2050 M&I/SSI Gap Analysis – Medium Gap Scenario

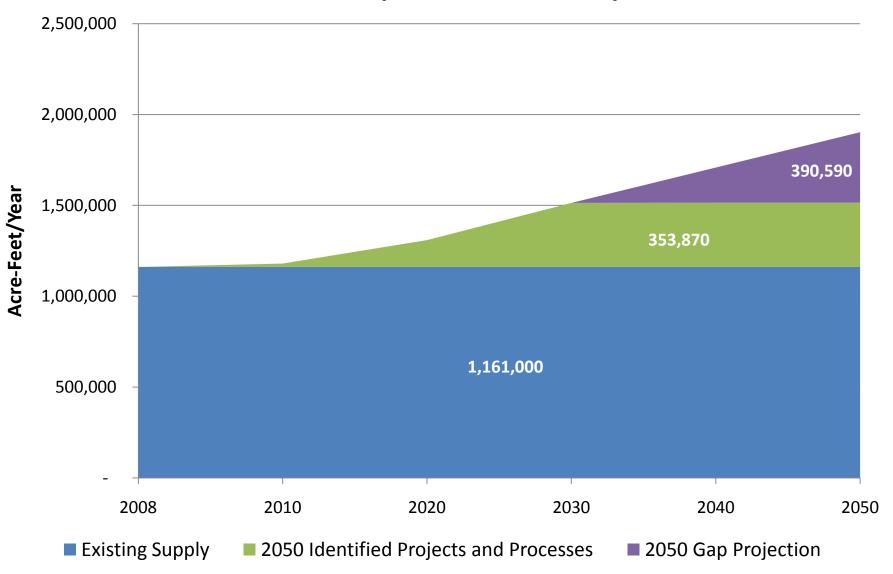

2050 M&I Gaps by County and Region (Medium Scenario)

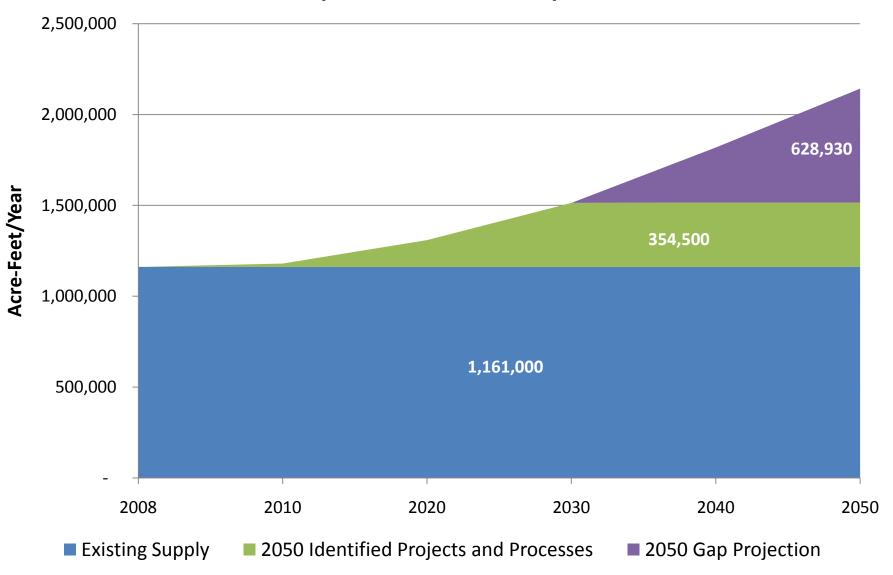

Statewide M&I and SSI Gap Summary Low Scenario (IPPs at 100%Yield)

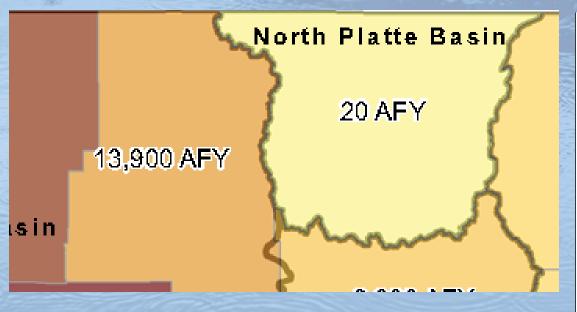

Statewide M&I and SSI Gap Summary Medium Scenario (IPPs at 72% Yield)

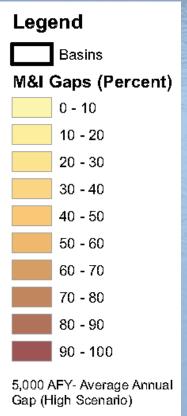

Statewide M&I and SSI Gap Summary High Scenario (IPPs at 60% Yield)

North Platte Basin M&I Gap – Medium Gap Scenario with 90% IPP Success

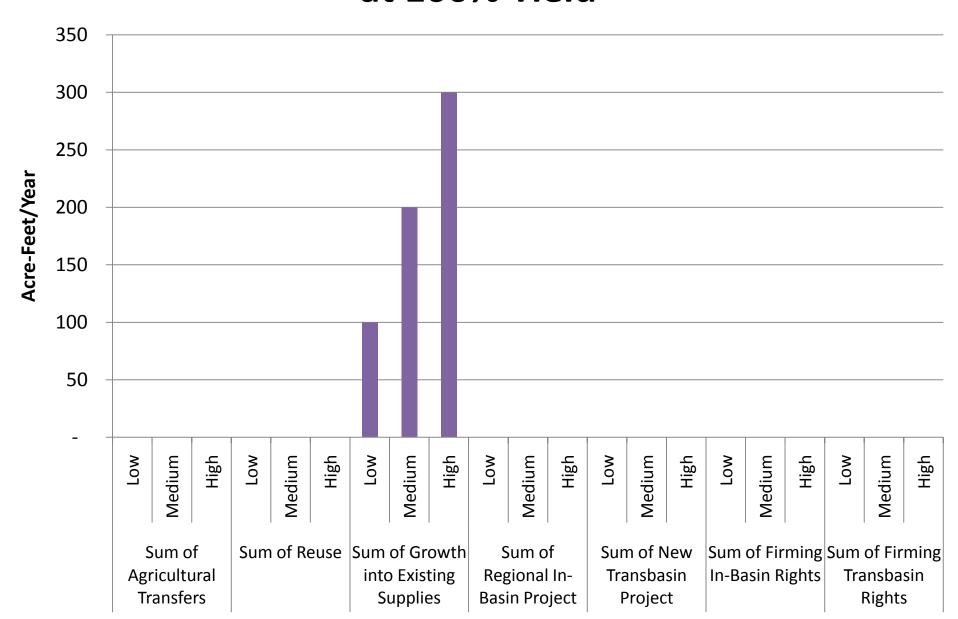

North Platte Basin M&I/SSI Gap Analysis – Identified Projects and Processes Summary at 100% Success Rate

Subject: Reconnaissance Level Cost Estimates for Agricultural and New

Supply Strategy Concepts

The Colorado Water Conservation Board (CWCB) and Interbasin Compate Committee (IBCC) are in the process of a continuing dialogue regarding Colorado's Water Supply Future. In June 2009, the CWCB published the draft report 'Strategies for Colorado's Water Supply Future.' that included a summary of peterntial agricultural transfer and new supply development concepts that may be a component of the portfolio used to meet Colorado's future water needs. For each concept, CWCB developed a description and reconnaissance level cost estimate. This technical memo includes an update of the descriptions and reconnaissance level cost estimates including the Green Mountain Reservoir and Blue Mesa concepts. This analysis does not include the Colorado River Reconnaissance concept.

CDM

Draft Technical Memorandum

To: Eric Hecox, CWCB Todd Doherty, CWCB

> n: Nicole Rowan, CDM Meg Frantz, AECOM Hal Simpson, CDM Ed Harvey, Harvey Economics

Date: July 16, 2010

Subject: State of Colorado Current and 2050 Agricultural Demand

The purpose of this technical memorandum is to update the Statewide Water St initiative (SWS) Projected 200 Agricultural Demands. in SWSI, the Colorado Conservation Board (CWCR) estimated agricultural demands for the years 2000 SWSI also summarized agricultural shortages at the Water District level. It shouthers that the CWCB did not consider the agricultural shortages identified in SWSI a needs to be met in the future across the state.

This technical memorandum provides information about the methodologies ut develop a current tally of irrigated acres throughout Colorado and details how acres were estimated. In addition, the memorandum provides an overview of e 2050 agricultural demands.

Summary of Key Issues Evaluation

Introduction

In a recent Colorado Water Conservation Board (CWCB) report, Colorado's population is projected to nearly double from 5.1 million to upward of 9.1 million people in 2050. The majority of these new people will reside on the Front Range, By 2050. the South Platte basin alone is forecasted to grow from 3.5 million to Sat bor 1.7 million people, By 2050. Clorado will need between 590,000 and 950 million acer-feet of additional water for municipal and industrial (M&D needs CWCWE 2010). Most of this demand will be met through three main water supply strategies conservation, agricultural transfers, and new water supply desendenced to the sup

As part of the Statewide Water Supply Initiative, CWCB identified water provider's specific projects and processes that they plan to implement to meet their future water demands. CWCB found that if 100 percent successful, these projects could yield approximately 511,000 acre-feet. Even if completely successful, these projects could yield approximately 511,000 acre-feet. Even if completely successful, there still remains a water supply gap. Over the past several years, many of these water projects have been proceeding through the federal permitting process with no guarantee of their success. If these projects and others—that are permised on the development of new water supplies—are not built, future water demand will have to be met mostly through a combination of agricultural transfers and conservation. While conservation will occur, a large portion would likely be through agricultural transfers.

Traditional agricultural water transfers have been and will continue to be an important part of water providers' plans for meeting their future water demand and there are farmers and ranchers willing to sell their water rights. Realizing this, there is a concern that some water

SUMMARY AND DISCUSSION

Reports in the M&I Context

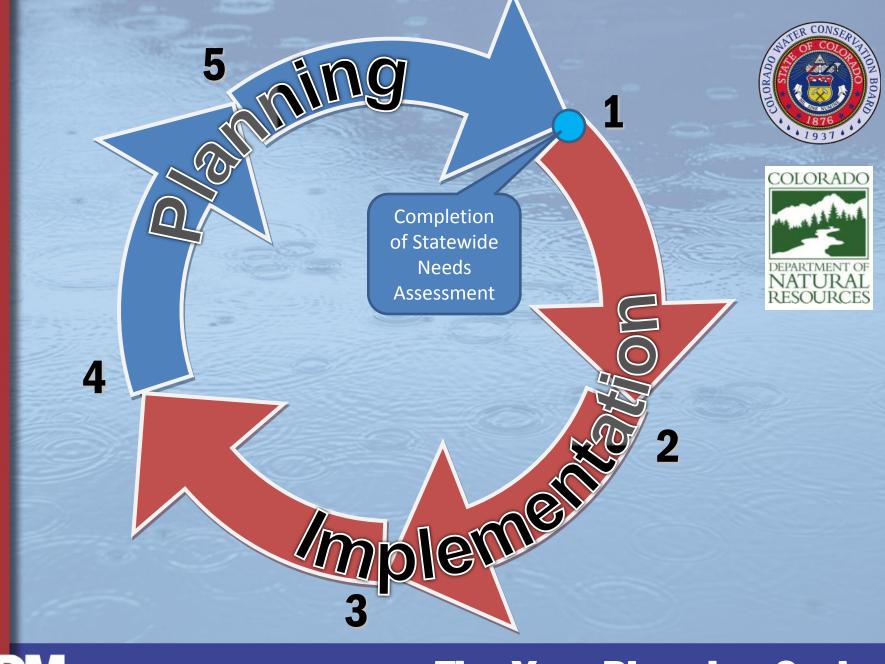

SWSI Recommendations

- 1. Ongoing Dialogue Among all Water Interests
- 2. Track and Support the Identified Projects and Processes
- 3. Develop a Program to Evaluate, Quantify and Prioritize Environmental and Recreational Water Enhancement Goals
- 4. Work Towards Consensus Recommendations on Funding Mechanisms for Environmental and Recreational Enhancements
- 5. Create a Common Understanding of Future Water Supplies
- 6. Develop Implementation Plans Towards Meeting Future Needs
- 7. Assess Potential New State Roles in Implementing Solutions
- 8. Develop Requirements for Standardized Annual M&I Water Use Data Reporting
