Length: 5.3 miles

USGS Quad(s): Trinchera Peak, Cucharas Pass

ISF Appropriation: 3.0 cfs (04/15 – 05/14)
 4.9 cfs (05/15 – 06/30)
 2.5 cfs (07/01 – 08/14)
 1.6 cfs (08/15 – 09/15)
 1.2 cfs (09/16 – 04/14)

The information contained in this report and the associated instream flow file folder forms the basis for the instream flow recommendation to be considered by the Colorado Water Conservation Board (Board). It is the Colorado Division of Wildlife (CDOW) staff's opinion that the information contained in this report is sufficient for the Board's staff to begin the investigations required to support the findings required in Rule 5(i) of the Instream Flow Rules.

The State of Colorado's Instream Flow Program (ISFP) was created in 1973 when the Colorado State Legislature recognized "the need to correlate the activities of mankind with some reasonable preservation of the natural environment" (see 37-92-102 (3) C.R.S.). The statute vests the Board with the exclusive authority to appropriate and acquire instream flow and natural lake level water rights. In order to encourage other entities to participate in Colorado's ISFP, the statute directs the Board to request instream flow recommendations from other state and federal agencies. The CDOW is recommending this segment of the Cucharas River to the Board for inclusion into the ISFP. The Cucharas River should be considered for inclusion into the ISFP because it has a natural environment that can be preserved to a reasonable degree with an instream flow water right.

The CDOW is forwarding this stream flow recommendation to the Board to meet Colorado's policy "... that the wildlife and their environment are to be protected, preserved, enhanced, and

managed for the use, benefit, and enjoyment of the people of this state and its visitors ... and that, to carry out such program and policy, there shall be a continuous operation of planning, acquisition, and development of wildlife habitats and facilities for wildlife-related opportunities" (See §33-1-101 (1) C.R.S.). The CDOW Strategic Plan states "[h]ealthy aquatic environments are essential to maintain healthy and viable fisheries, and critical for self-sustaining populations. The [CDOW] desires to protect and enhance the quality and quantity of aquatic habitats."

The Cucharas River is approximately 70 miles long. It begins on the northeast side of Trinchera Peak at an elevation of approximately 12,000 feet and terminates at the confluence with Huerfano Creek at an elevation of approximately 5,100 feet. Of the 5.3 mile segment addressed by this report, approximately 95% of the segment, or 5.3 miles, is located on public lands. The Cucharas River is located within Huerfano County. The Cucharas River generally flows in a northeasterly direction.

The subject of this report is a segment of the Cucharas River beginning at its headwaters and extending downstream to State Highway 12. The proposed segment is located southwest of the Town of Cuchara. The recommendation for this segment is discussed below.

Instream Flow Recommendation(s)

The CDOW is recommending 4.90 cfs, summer, and 1.60 cfs, winter, based on their data collection efforts. This recommendation is based on the physical and biological data collected to date and does not incorporate any water availability constraints.

- 4.90 cubic feet per second is recommended is required to maintain the three principal hydraulic criteria of average depth, average velocity and percent wetted perimeter;
- 1.60 cubic feet per second is required to maintain two of the three principal hydraulic criteria.

The modeling results from this survey effort are within the confidence interval produced by the R2CROSS model (see Table 1).

Land Status Review

Upper Terminus	Lower Terminus	Total Length (miles)	Land Ownership	
			% Private	% Public
Headwaters	State Highway 12	5.3	5%	95%

95% of the public lands are managed by the USFS.

Biological and Field Survey Data

The CDOW, in April of 1997 and May and July of 2006, collected stream cross section information, natural environment data, and other data needed to quantify the instream flow needs for this reach of the Cucharas River. The Cucharas River is classified as a small stream (between 10 to 19 feet wide) and fishery surveys indicate the stream environment of the Cucharas River supports rainbow trout (*Oncorhynchus mykiss*), brown trout (*Salmo trutta*) and brook trout (*Salvelinus fontinalis*) (See CDOW Fish Survey in Appendix B).

Field Survey Data

CDOW staff used the R2CROSS methodology to quantify the amount of water required to preserve the natural environment to a reasonable degree. The R2CROSS method requires that stream discharge and channel profile data be collected in a riffle stream habitat type. Riffles are most easily visualized, as the stream habitat types that would dry up first should streamflow cease. This type of hydraulic data collection consists of setting up a transect, surveying the stream channel geometry, and measuring the stream discharge. Appendix B contains copies of field data collected for this proposed segment.

Biological Flow Recommendation

The Board staff relies upon the biological expertise of the cooperating agencies to interpret output from the R2CROSS data collected to develop the initial, biologic instream flow recommendation. This initial recommendation is designed to address the unique biologic requirements of each stream without regard to water availability. Three instream flow hydraulic parameters, average depth, percent wetted perimeter, and average velocity are used to develop biologic instream flow recommendations. The CDOW has determined that maintaining these three hydraulic parameters at adequate levels across riffle habitat types, aquatic habitat in pools and runs will also be maintained for most life stages of fish and aquatic invertebrates (Nehring 1979; Espegren 1996).

For this segment of stream, three data sets were collected with the results shown in Table 1 below. Table 1 shows who collected the data (Party), the date the data was collected, the measured discharge at the time of the survey (Q), the accuracy range of the predicted flows based on Manning's Equation (240% and 40% of Q), the summer flow recommendation based on meeting 3 of 3 hydraulic criteria and the winter flow recommendation based upon 2 of 3 hydraulic criteria.

Table 1: Data

Party	Date	Q	250%-40%	Summer (3/3)	Winter (2/3)
DOW	4/23/97	3.5	8.8 – 1.4	4.9	2.0
DOW	5/10/06	2.2	5.5 – 0.9	7.9 ^(R)	1.3
DOW	7/19/06	2.7	6.8 – 1.1	7.8 ^(R)	1.4

DOW = Division of Wildlife

R = Outside of R2X Accuracy Range

Biologic Flow Recommendation

The summer flow recommendation, which met 3 of 3 criteria and is within the accuracy range of the R2CROSS model, ranged is 4.9 cfs (See Table 1). The winter flow recommendations, which met 2 of 3 criteria and were within the accuracy range of the R2CROSS model, ranged from 2.0 cfs to 1.3 cfs. Averaging the winter values within range, results in a 1.6 cfs winter recommendation (See Table 1).

Hydrologic Data

After incorporating the above water availability constraints, the original instream flow recommendation was modified to the following:

- 4.90 cubic feet per second is recommended from May 15 through June 30;
- 2.5 cubic feet per second is recommended from July 1 through August 15
- 1.60 cubic feet per second is recommended from August 16 through September 15;
- 1.20 cubic feet per second is recommended from September 16 through April 14;
- 3.00 cubic feet per second is recommended from April 15 through May 14.

However, if additional water is determined to be available in further investigations, the CDOW would recommend appropriating the additional water up to the recommended flow amounts to preserve the natural environment to a reasonable degree.

The information contained in this report and the associated instream flow file folder forms the basis for the instream flow recommendation to be considered by the Colorado Water Conservation Board (Board). It is the Colorado Division of Wildlife (CDOW) staff's opinion that the information contained in this report is sufficient for the Board's staff to begin the investigations required to support the findings required in Rule 5(i) of the Instream Flow Rules.

The State of Colorado's Instream Flow Program (ISFP) was created in 1973 when the Colorado State Legislature recognized "the need to correlate the activities of mankind with some reasonable preservation of the natural environment" (see 37-92-102 (3) C.R.S.). The statute vests the Board with the exclusive authority to appropriate and acquire instream flow and natural lake level water rights. In order to encourage other entities to participate in Colorado's ISFP, the statute directs the Board to request instream flow recommendations from other state and federal agencies. The CDOW is recommending this segment of the Cucharas River to the Board for inclusion into the ISFP. The Cucharas River should be considered for inclusion into the ISFP because it has a natural environment that can be preserved to a reasonable degree with an instream flow water right.

The CDOW is forwarding this stream flow recommendation to the Board to meet Colorado's policy "... that the wildlife and their environment are to be protected, preserved, enhanced, and

managed for the use, benefit, and enjoyment of the people of this state and its visitors ... and that, to carry out such program and policy, there shall be a continuous operation of planning, acquisition, and development of wildlife habitats and facilities for wildlife-related opportunities" (See §33-1-101 (1) C.R.S.). The CDOW Strategic Plan states "[h]ealthy aquatic environments are essential to maintain healthy and viable fisheries, and critical for self-sustaining populations. The [CDOW] desires to protect and enhance the quality and quantity of aquatic habitats."

The Cucharas River is approximately 70 miles long. It begins on the northeast side of Trinchera Peak at an elevation of approximately 12,000 feet and terminates at the confluence with Huerfano Creek at an elevation of approximately 5,100 feet. Of the 5.3 mile segment addressed by this report, approximately 95% of the segment, or 5.3 miles, is located on public lands. The Cucharas River is located within Huerfano County. The Cucharas River generally flows in a northeasterly direction.

The subject of this report is a segment of the Cucharas River beginning at its headwaters and extending downstream to Deadman Creek. The proposed segment is located southwest of the Town of Cuchara. The recommendation for this segment is discussed below.

Instream Flow Recommendation(s)

The CDOW is recommending 4.90 cfs, summer, and 1.60 cfs, winter, based on their data collection efforts. This recommendation is based on the physical and biological data collected to date and does not incorporate any water availability constraints.

- 4.90 cubic feet per second is recommended is required to maintain the three principal hydraulic criteria of average depth, average velocity and percent wetted perimeter;
- 1.60 cubic feet per second is required to maintain two of the three principal hydraulic criteria.

The modeling results from this survey effort are within the confidence interval produced by the R2CROSS model (see Table 1).

Land Status Review

Upper Terminus	Lower Terminus	Total Length (miles)	Land Ownership	
			% Private	% Public
Headwaters	Deadman Creek	5.3	5%	95%

95% of the public lands are managed by the USFS.

Biological and Field Survey Data

The CDOW, in April of 1997 and May and July of 2006, collected stream cross section information, natural environment data, and other data needed to quantify the instream flow needs for this reach of the Cucharas River. The Cucharas River is classified as a small stream (between 10 to 19 feet wide) and fishery surveys indicate the stream environment of the Cucharas River supports rainbow trout (*Oncorhynchus mykiss*), brown trout (*Salmo trutta*) and brook trout (*Salvelinus fontinalis*) (See CDOW Fish Survey in Appendix B).

Field Survey Data

CDOW staff used the R2CROSS methodology to quantify the amount of water required to preserve the natural environment to a reasonable degree. The R2CROSS method requires that stream discharge and channel profile data be collected in a riffle stream habitat type. Riffles are most easily visualized, as the stream habitat types that would dry up first should streamflow cease. This type of hydraulic data collection consists of setting up a transect, surveying the stream channel geometry, and measuring the stream discharge. Appendix B contains copies of field data collected for this proposed segment.

Biological Flow Recommendation

The Board staff relies upon the biological expertise of the cooperating agencies to interpret output from the R2CROSS data collected to develop the initial, biologic instream flow recommendation. This initial recommendation is designed to address the unique biologic requirements of each stream without regard to water availability. Three instream flow hydraulic parameters, average depth, percent wetted perimeter, and average velocity are used to develop biologic instream flow recommendations. The CDOW has determined that maintaining these three hydraulic parameters at adequate levels across riffle habitat types, aquatic habitat in pools and runs will also be maintained for most life stages of fish and aquatic invertebrates (Nehring 1979; Espegren 1996).

For this segment of stream, three data sets were collected with the results shown in Table 1 below. Table 1 shows who collected the data (Party), the date the data was collected, the measured discharge at the time of the survey (Q), the accuracy range of the predicted flows based on Manning's Equation (240% and 40% of Q), the summer flow recommendation based on meeting 3 of 3 hydraulic criteria and the winter flow recommendation based upon 2 of 3 hydraulic criteria.

Table 1: Data

Party	Date	Q	250%-40%	Summer (3/3)	Winter (2/3)
DOW	4/23/97	3.5	8.8 – 1.4	4.9	2.0
DOW	5/10/06	2.2	5.5 – 0.9	7.9 ^(OR)	1.3
DOW	7/19/06	2.7	6.8 – 1.1	7.8 ^(OR)	1.4

DOW = Division of Wildlife

OR = Outside of R2X Accuracy Range

Biologic Flow Recommendation

The summer flow recommendation, which met 3 of 3 criteria and is within the accuracy range of the R2CROSS model, ranged is 4.9 cfs (See Table 1). The winter flow recommendations, which met 2 of 3 criteria and were within the accuracy range of the R2CROSS model, ranged from 2.0 cfs to 1.3 cfs. Averaging the winter values within range, results in a 1.6 cfs winter recommendation (See Table 1).

Hydrologic Data

The CDOW staff conducted a preliminary evaluation of the stream hydrology to determine if water was physically available for an instream flow appropriation. The hydrograph below was derived from data collected by the USGS stream gage for Cucharas River at Boyd Ranch, near

La Veta, CO (#07114000), which has a drainage area of 56 square miles (See Gage Summary in Appendix C). The total drainage area upstream of this ISF segment of the Cucharas River is 9.4 square miles. The period of record for the Cucharas River gage was 1934 to 1981, the period of record used by staff in their analysis was 1934 to 1981, or 47 years of record. Table 2 below displays the estimated flow of Cucharas River at the lower terminus of the instream flow reach in terms of a percentage of exceedence.

Table 2: Estimated Stream Flow for Cucharas River

Exceedences	January	February	March	April	May	June	July	August	September	October	November	December
1%	2.1	2.7	3.7	20.1	47.0	44.5	18.9	8.1	4.5	3.9	3.4	2.5
5%	1.8	1.8	2.7	11.2	34.7	31.2	10.9	5.7	3.4	2.9	2.5	2.0
10%	1.6	1.6	2.2	7.6	28.6	24.8	9.1	4.7	2.7	2.2	2.0	1.8
20%	1.4	1.4	1.8	4.9	19.0	18.1	6.7	3.9	2.4	1.8	1.7	1.5
50%	1.2	1.2	1.3	2.7	8.1	9.2	3.9	2.4	1.6	1.5	1.4	1.2
80%	0.9	0.9	1.1	1.5	3.4	3.9	2.2	1.5	1.2	1.0	1.1	1.0
90%	0.8	0.9	0.9	1.3	2.0	2.9	1.7	1.2	0.9	0.9	0.9	0.8
95%	0.7	0.8	0.9	1.1	1.4	2.2	1.3	0.9	0.7	0.8	0.8	0.7
99%	0.6	0.6	0.7	0.9	1.2	1.2	0.6	0.6	0.5	0.6	0.6	0.5

Table 2 shows that the summer flow recommendation of 4.9 cfs is available at least 50% of the time for the months of May and June. The winter flow recommendation of 1.6 cfs is available at least 50% of the time from July through mid September and the month of April. Based on this water availability analysis, the winter recommendation was further reduced to 1.2 cfs for the time period of September 16 through March 31. After incorporating the above water availability constraints, the original instream flow recommendation was modified to the following:

- 4.90 cubic feet per second is recommended from May 15 through June 30;
- 1.60 cubic feet per second is recommended from July 1 through September 15;
- 1.20 cubic feet per second is recommended from September 16 through March 31;
- 1.60 cubic feet per second is recommended from April 1 through May 14.

However, if additional water is determined to be available in further investigations, the CDOW would recommend appropriating the additional water up to the recommended flow amounts to preserve the natural environment to a reasonable degree.

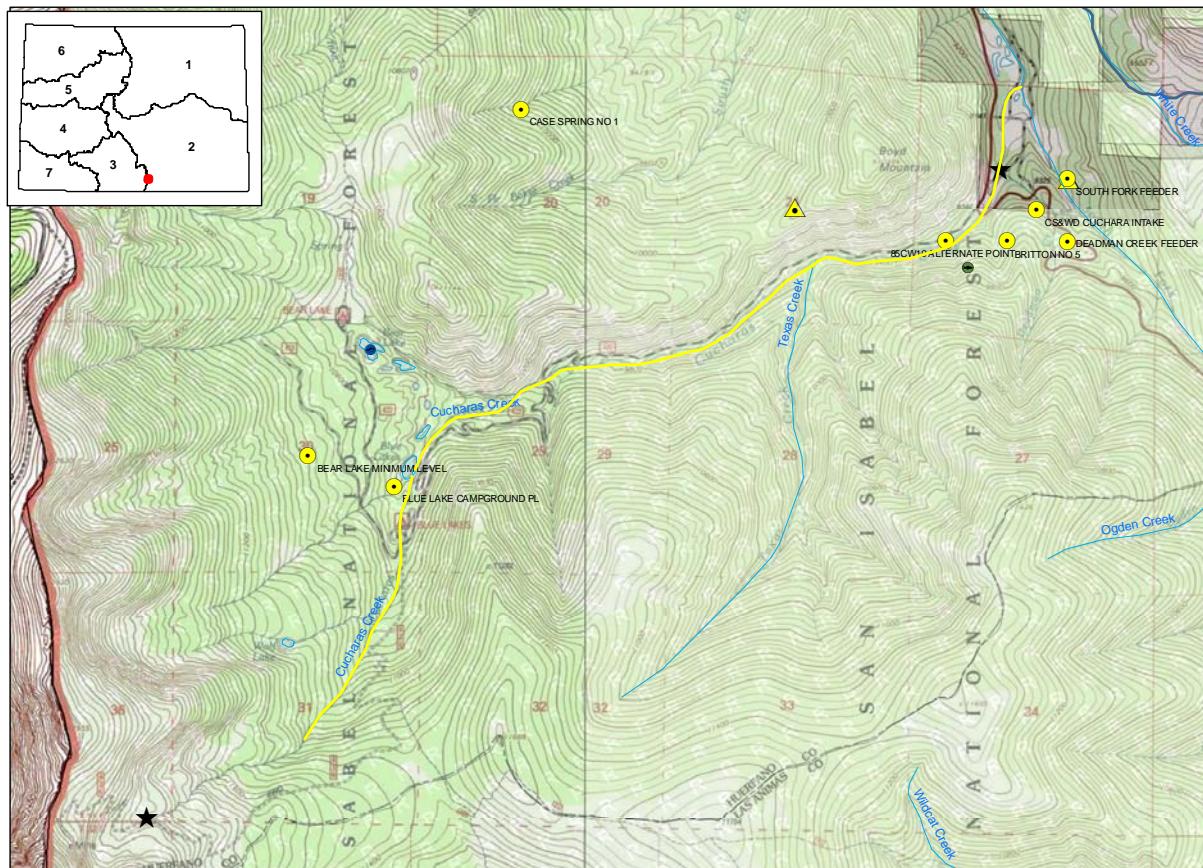

Precipitation Data

CDOW staff identified 4 local precipitation data sets located near the Cucharas River Drainage: La Veta, La Veta Pass, North Lake and Aguilar 18 WSW (see Precipitation Data in Appendix C).

Existing Water Right Information

CDOW staff has analyzed the water rights tabulation and will consult with the Division Engineer's Office (DEO) to identify any potential water availability problems due to existing diversions. Records indicate that there are 4 surface water diversions that are located within this reach of Cucharas River. In addition, there are several existing water rights downstream of the proposed instream flow reach (see below).

Spanish Peaks Day/OVERNIGHT use areas

Spanish Peaks Day/OVERNIGHT use areas: These areas are usually open April to October, depending on snow conditions.

Location: From La Veta, travel north on Hwy 12. Map shows location of each area.

Weather: Weather in the summer is generally mild with warm days and cool nights; highs in the 80's and lows in the 40's. Afternoon thunderstorms a common occurrence. Spring and fall weather is usually dry and sunny with highs in the 60's and lows in the 30's.

Attractions: Picnicking, hiking & fishing.

Special User Fee: Fee stations are located near the entrance of the areas. During the summer, the sites receives heavy use on the weekends and holidays.

Area	Fee	Facilities	Trail Access
Cordova Pass Parking Area	4.00/day	3 picnic sites, restroom and trash receptacle	Access to Levy-Krier(1392), West Peak (1390) and Salazar(1390a) trails
Cordova Pass Overnight RV Parking	4.00/night	3 overnight campsites, restroom and trash receptacle	Access to Levy-Krier(1392), West Peak (1390) and Salazar(1390a) trails
Cuchara Day Use Picnic Area	5.00/day	13 picnic sites, restroom and trash receptacle	No trails, just a picnic area
Spring Creek Trailhead	4.00/day	3 picnic sites, restroom and trash receptacle	Access to Dodgeton trail

Other Important Information: Be Bear Aware. It is prohibited to Possess or leave unattended any food, refuse or other bear attractants unless it is; A. stored in a bear resistant method or, B. being eaten, prepared for eating or being transported. 36 CFR 261.58(cc).

Cuchara Creek
USFS Picnic Area

COLORADO WATER CONSERVATION BOARD
INSTREAM FLOW / NATURAL LAKE LEVEL PROGRAM
STREAM CROSS-SECTION AND FLOW ANALYSIS

LOCATION INFORMATION

STREAM NAME: Cucharas Creek
XS LOCATION: USFS Picnic Area
XS NUMBER: 071906-x3

DATE: 19-Jul-06
OBSERVERS: Uppendahl & Molloy

1/4 SEC: NE
SECTION: 29
TWP: 31 S
RANGE: 69 W
PM: 6

COUNTY: Huerfano
WATERSHED: Cucharas Creek
DIVISION: 2
DOW CODE: 0

USGS MAP: Cucharas Pass
USFS MAP: 0

SUPPLEMENTAL DATA

*** NOTE ***

Leave TAPE WT and TENSION
at defaults for data collected
with a survey level and rod

TAPE WT: 0.0106
TENSION: 99999
