Re: Water Supply Reserve Account Grant Application for Jackson County Water Conservancy District's
Structures for Water Control: Headgates and Diversion - WSRA Funds Requested - \$128,828.00 Basin
Account Funds

Dear Mr. Doherty:

This letter is to advise you that the grant application for \$128,828.00 from Basin Account funds for Jackson County Water Conservancy District's Structures for Water Control: Headgates and Diversion project was reviewed by the North Platte Basin Roundtable (NPBRT) and evaluated utilizing the NPBRT Water Supply Reserve Account Grant Evaluation Criteria. The NPBRT met on the 28th day of June, 2011, and ten voting members of the NPBRT voted to approve the project and the requested WSRA funding and one voting member, Jimmer Baller, abstained from voting because he is an involved landowner and a direct beneficiary of the project. Because there were no dissenting votes, a minority report is not required.

The NPBRT has identified the development of the full allocation of irrigated acres in the North Platte Basin allowed under the equitable apportionment Supreme Court Decree and the Three States Agreement as a very high priority consumptive need. This project will provide funding to replace four old, deteriorating headgate structures and install one new, permanent diversion structure within Jackson County. Each of these proposed structures is critical in the delivery of irrigation water to storage and/or to irrigated ground. The proposed new headgate structures will allow the involved water users to safely, effectively and efficiently control and regulate the amount of water needed to irrigate associated lands and the new diversion structure will eliminate annual damage to the streambanks and reducing sediment discharge. Installing these improved structures will not only help to maintain our current agricultural economic base, but they will help to meet the identified consumptive need of increasing irrigated acres within the county. Improved water efficiency is a benefit to all consumptive and associated non-consumptive uses of irrigation water. This project will help meet both consumptive and non-consumptive needs identified by the NPBRT. The higher degree of control and efficiency will benefit all consumptive and non-consumptive uses of water diverted for irrigation.

Please feel free to call me with any questions that you may have regarding the North Platte Basin Roundtable meeting or our level of support for this project.

Sincerely,

Wm. Kent Crowder, Chair
North Platte Basin Roundtable
