Water Efficiency Grant PDA 13000000027
Steamboat Springs, Colorado

75% Progress Report

The following is a progress report regarding the **Water Efficiency Grant - Web Portal to Detect Leaks for Customers (SOW CMS#48053)**. The project is now 75% complete and the following items have been performed:

Task 3: Integrate Aclara AMI Star System Data into the Web Portal

Daily consumption data from the Aclara AMI system is automatically imported into the AquaHawk system each day.

Task 4: Launch Beta Test of Web Portal System

During this task, the demand-side leak detection and irrigation efficiency solution has been tested by MWW employees. User accounts have been created for MWW staff. Training has been conducted for MWW staff via webinar. Enhancements are being added on a daily basis.

Invitation to a select group of customers has not been done.

Moving Forward:

We look forward to having the website available to our select group of customers by May 1, 2013. This is also the day that mandatory water restrictions go into effect. The website is already providing invaluable information for high usage and will be a great tool when irrigation season begins.

Full launch to our customers will be based on the Beta test results of our select customer group. Target date is June 1, 2013.

Respectfully Submitted,

Nancy Wilson
Office Manager
Mt. Werner Water and Sanitation District
