The State may withhold any amount that may be due to Grantee as the State deems necessary to protect the State, including loss as a result of outstanding liens or claims of former lien holders, or to reimburse the State for the excess costs incurred in procuring similar goods or services. Grantee shall be liable for excess costs incurred by the State in procuring from third parties replacement Work, Services or substitute Goods as cover.

B. Early Termination in the Public Interest

The State is entering into this Grant for the purpose of carrying out the public policy of the State of Colorado, as determined by its Governor, General Assembly, and/or Courts. If this Grant ceases to further the public policy of the State, the State, in its sole discretion, may terminate this Grant in whole or in part. Exercise by the State of this right shall not constitute a breach of the State's obligations hereunder. This subsection shall not apply to a termination of this Grant by the State for cause or breach by Grantee, which shall be governed by §15(A) or as otherwise specifically provided for herein.

i. Method and Content

The State shall notify Grantee of such termination in accordance with §16. The notice shall specify the effective date of the termination and whether it affects all or a portion of this Grant.

ii. Obligations and Rights

Upon receipt of a termination notice, Grantee shall be subject to and comply with the same obligations and rights set forth in §15(A)(i).

iii. Payments

If this Grant is terminated by the State pursuant to this §15(B), Grantee shall be paid an amount which bears the same ratio to the total reimbursement under this Grant as the Services satisfactorily performed bear to the total Services covered by this Grant, less payments previously made. Additionally, if this Grant is less than 60% completed, the State may reimburse Grantee for a portion of actual out-of-pocket expenses (not otherwise reimbursed under this Grant) incurred by Grantee

which are directly attributable to the uncompleted portion of Grantee's obligations hereunder; provided that the sum of any and all reimbursement shall not exceed the maximum amount payable to Grantee hereunder.

C. Remedies Not Involving Termination

The State, in its sole discretion, may exercise one or more of the following remedies in addition to other remedies available to it:

i. Suspend Performance

Suspend Grantee's performance with respect to all or any portion of this Grant pending necessary corrective action as specified by the State without entitling Grantee to an adjustment in price/cost or performance schedule. Grantee shall promptly cease performance and incurring costs in accordance with the State's directive and the State shall not be liable for costs incurred by Grantee after the suspension of performance under this provision.

ii. Withhold Payment

Withhold payment to Grantee until corrections in Grantee's performance are satisfactorily made and completed.

iii. Deny Payment

Deny payment for those obligations not performed, that due to Grantee's actions or inactions, cannot be performed or, if performed, would be of no value to the State; provided, that any denial of payment shall be reasonably related to the value to the State of the obligations not performed.

iv. Removal

Demand removal of any of Grantee's employees, agents, or Subgrantees whom the State deems incompetent, careless, insubordinate, unsuitable, or otherwise unacceptable, or whose continued relation to this Grant is deemed to be contrary to the public interest or not in the State's best interest.

v. Intellectual Property

EXHIBIT A
GUNNISON RIVER RIPARIAN AND DIVERSION RESTORATION PROJECT
STATEMENT OF WORK

WATER ACTIVITY NAME – Gunnison River Riparian and Diversion Restoration Project

GRANT RECIPIENT – The City of Gunnison and Colorado Parks and Wildlife

FUNDING SOURCE – Statewide Account and Gunnison River Basin Account

INTRODUCTION AND BACKGROUND

Background of Project Scope

The Gunnison River north of the city of Gunnison has experienced historic flooding which has been contained by large, concrete-rubble levees constructed on one or both sides of the river. The levees have been extended downstream in response to flooding. The City and Colorado Parks and Wildlife recognize that floodplain and channel functions have been significantly altered and agree that improving these functions will be beneficial. Because no development will occur on a majority of this reach of the river floodplain a holistic resource management approach is possible to implement.

CPW recently completed geomorphic assessment work and an initial assessment of fisheries limiting factors on the project reach. This work included measurements of cross sections of impacted and reference reaches as well as a survey measuring streambank and streambed characteristics throughout the project area. This work guided creation of a conceptual design for river and riparian restoration work.

River management alternatives will be developed through a comprehensive review and implementation program using a four-step approach: 1) stream reach survey data collection; 2) creation of a preliminary design for stream and riparian restoration project which would be reviewed by stakeholders; 3) development of final project designs and detailed cost estimates; and, 4) implementation.

OBJECTIVES

There are five main objectives of the project.

Survey work will provide data required to identify factors contributing to fisheries habitat degradation and channel instability. Survey data is considered essential to ensure that preferred habitat improvements and stream channel modifications may occur without adversely impacting the long-term channel functions, degrade riparian habitat, or endanger structures located downstream.

Preferred alternative actions will enhance fishery habitat and increase trout density and biomass. Features such as habitat structures that can withstand high velocities during peak flow are to be considered. Habitat structures and channel modifications will be prescribed to protect eroding banks, narrow over-width channels, improve frequency of deep pools, enhance in-stream cover, and restore sediment transport velocities. Alterations of the channel geometry will also provide benefits for rafting and kayaking enthusiasts.

Preferred alternative actions to be implemented may include the removal of levees in order to break the scouring and aggradation caused by the levees. It is the desire to make alterations that will promote inundation by high frequency flood events while providing protection to citizens and structures during high volume events. The resulting actions should play a significant role in maintaining or expanding flood protection and mitigation.

Improvements to irrigation diversion structures on the Piloni Ditch and Palisades #1 Ditch and to the Palisades and Wilson ditches will aid agricultural users by reducing their annual maintenance costs at the intake structures and will assist them in putting water rights to beneficial use.

Work will be completed post-project to assess the effects of the river and riparian restoration work.

TASKS OVERVIEW

Tasks associated with this project follow a project critical path with an integrated timeline established for the survey and design programming, bidding process, implementation of final project design, and monitoring of results.

TASK 1 – COMPLETE GEOMORPHIC ASSESSMENT WORK

Description of Task

Additional survey work will be completed including additional detail on diversion structures, right bank measurements as well as microhabitat measurements to guide habitat treatments and proposed channel modifications. Additional work will include a hydrologic analysis (Hec-ras); pebble counts; water needs assessment; and assessment of diversion relocation on Wilson Ditch. This survey work will allow for completion of a preliminary design. Geomorphic assessment work is expected to take about six weeks to complete but will have to be completed during base flows. Work is expected to be completed by fall 2014.

Method/Procedure

The CPW will perform elevation measurements for cross sections and longitudinal surveys with the use of satellite-based measurement equipment. Work will also include an analysis of bed material particle size data. Bed material information indicates the particle size range scoured and deposited. A “Wolman” type pebble count method, or an equivalent, will be used. This information will then be used, together with an analysis of flows, to determine the potential for additional scour and the size of material from which to construct fishery enhancement or grade control structures. Hydrologic assessments will be completed to assess flood stage changes between existing conditions and proposed habitat improvement treatments. Additional water needs assessments will be conducted for the areas served by the Piloni Ditch.

Deliverables

Complete segment survey with geomorphic assessment, flood elevation model for critical reaches, and completed bed material assessment.

TASK 2 - DEVELOP A PRELIMINARY DESIGN FOR REVIEW BY STAKEHOLDERS

Description of Task

The CPW will use its employees with specialized expertise in habitat improvement and stream channel design to flesh out the conceptual design and develop a preliminary design that addresses the issues and problems that are discovered with the full geomorphic assessment. The preliminary design will be routed through stakeholders for review and potential modification prior to creation of final design. Final project design work could be completed by late fall 2014 with a three-week stakeholder review.

Method/Procedure

CPW biologists, researchers, and engineers with the appropriate training will use the geomorphic assessment to identify general treatment solutions for the six individual treatment segments identified in the conceptual design. Preliminary restoration design will include potential treatment solutions (habitat structures, plantings, channel modifications, etc.) appropriate for project area.

Deliverable

CPW will complete preliminary design which will then be reviewed by stakeholders to provide input to guide completion of final design.

TASK 3 – COMPLETE FINAL DESIGN AND USE BID PROCESS TO SELECT CONTRACTOR(S)

Description of Task

Incorporate stakeholder recommended revisions to the preliminary design and complete final design and bid package to allow for solicitation of contractor(s) to complete project components. Final design and creation of bid documents is expected to be completed by January 2015, although some sub-components may be ready to bid or complete sooner (such as Piloni diversion or riparian planting portions of the project).

Method/Procedure

The CPW will present the final design along with specific minimum project requirements and quality demands to interested contractors. Contractor(s) will be prequalified or will be selected based on qualifications and submitted bid. The City of Gunnison will administer and manage the project budget with revenues and expenditure processed through the City Finance Department. The CPW staff will manage all construction inspection activity except the Piloni head-gate construction, which will involve inspections by the City Engineer.

Deliverable

CPW will complete the final project design with plan sheets, materials specifications, structural design details and plan view, profile and cross section details of the amended channel configuration. Final construction-level plans will be ready before construction bid announcements are published and contractor(s) are selected.

TASK 4 – ACQUIRE AND STOCKPILE MATERIALS

Description of Task

Collect or purchase and store necessary materials for implementing the design. Materials would be purchased and/or delivered in spring 2015 until project implementation in fall 2015, with the exception of project components which may be completed earlier (such as Piloni diversion and riparian planting components).

Method/Procedure

CPW will work collaboratively with other parties to identify sources of materials necessary for the implementation of the stream and riparian work. These are likely to include boulders, tree roots, logs, willow cuttings/shoots, tree and willow plantings, etc. These materials will be assembled at the restoration site for use in implementation or scheduled for delivery during construction.

Deliverable

Restoration Materials

TASK 5 – COMPLETE HABITAT IMPROVEMENT DESIGN COMPONENTS

Description of Task

Construction of project components including fish habitat and bank stabilization structures, irrigation diversion improvements, boater and angler access improvements, and riparian enhancements.

Method/Procedure

This task includes physical improvements to address the areas of degradation, diversions within the river channel, river function, flood storage and aquifer recharge, improved conditions for wild brown and rainbow trout including in-channel deep pools and mid-channel adult holding cover, improvements to riparian habitat, and improved access for fishing and boat passage. The river reach survey identifies six river reaches involving different types of improvements. This work may be completed in phases to allow for sub-components to be completed separately (Piloni Diversion and riparian planting components). Habitat improvement project components are expected to be completed by fall 2015.

Deliverables

The following is a summary of the improvements anticipated in the different reaches.

Segment 1: North Bridge to the Railroad Bridge (4,413 ft.). Rebuild Piloni Ditch diversion, improve access to the Piloni Ditch headgate, install boulder clusters, and improve near-shore habitat. Alterations will address some of the existing impairments of channelization, bermed banks, disconnection from the floodplain, lack of deep scour pools and sinuosity, narrow belt width, decreased fry and adult habitat, lack of large wood and boulders, diminished riparian vegetation, lack of shade, lack of near-bank habitat and the influence of bridges.

Segment 2: Railroad Bridge to Historic Blowout on VanTuyl Ranch (2,580 ft.). Proposed restoration will address some of the existing impairments of disconnection from the floodplain, lack of deep lateral scour pools, high width:depth ratio, monotypic reach, bermed banks, channelization, lack of sinuosity, belt width too narrow, lack of large wood and large boulders, lack of shade, lack of near-bank habitat, decreased fry and adult habitat. Develop meandering pool/riffle sequence with alternating cobble bars, boulder cluster, optimize near-shore habitat, and incorporate root wads for toe protection.

Segment 3 – Historic Blowout to Wilson Creek Diversion (1,610 ft.). Work will address some of the identified impairments including disconnection from the floodplain, high velocity and gradient, point bar development, lateral scour pools, Wilson Creek intake location within depositional area, gravel pile at Wilson Creek, 90 degree channel configuration, lack of fry habitat, lack of vegetation or bank-full bench on bends, and presence of un-natural concrete chunks.

Segment 4: Wilson Creek Diversion through Ohio Creek Confluence (2,756 ft.). Address existing impairments of cobble bars, limited lateral scour pools, backwater locations, old meander-chute cut-off channels, large wood, excessive bedload fall out, bank erosion and vertical banks. Install toe protection on bermed reaches, j-hook vanes, habitat clusters, boulder clusters, expand riparian vegetation and cottonwood gallery with seedling plants.

Segment 5 - Ohio Creek Confluence through SWA (5,920 ft.). Address the existing impairments of diversion structures, lack of point bars, weak and eroding banks due to human access. Address the current impairments of bank erosion due to boater access, limited adult holding habitat and trails through the riparian habitat. Install additional adult fish holding habitat, the bank will be hardened to limit erosion and the riparian habitat will be managed by the use of trails.

Segment 6 - West Tomichi Riverway Park (1,700 ft.). Improve bank conditions and reduce the erosion of the bank caused primarily by park uses. Root wads, woody toe protection, and boulder clusters will be installed, banks will be hardened to improve fishing access and reduce erosion, and the riparian vegetation and cottonwood gallery will be expanded by the planting of seedling trees.

TASK 6 – POST-TREATMENT EVALUATION

Description of Task

Conduct biological assessment of the treated river segment.

Method/Procedure

CPW will conduct mark-recapture electrofishing surveys using raft electrofishing equipment and crew for five years following the completion of restoration to quantify the biological effect of the work done. This will occur on a standardized site during low flows in the late summer or fall during at least two occasions within the monitoring period.

Deliverable

Biological survey and assessment of treatment effectiveness.

CITY AND CPW RESPONSIBILITIES

The City and the CPW will work cooperatively on all elements of the construction project. The CPW will be responsible for all permitting requirements including Army Corp of Engineers, Clean Water Act 404 permitting and Federal Emergency Management Agency floodplain permits. As previously stated, the City will be responsible for the financial administration of the project and the CPW will manage the majority of the construction management elements.

The City and CPW will work together to evaluate and choose contractor(s) for the project construction work. It is anticipated that one primary contractor will be selected, but it is possible that separate contractors will work on project sub-components (Piloni Ditch diversion and riparian planting). The contractor will have experience in similar river restoration work and be fully bonded and insured pursuant to City of Gunnison contract protocol. The selected contractor shall be responsible for completing the project, pursuant to the construction level designs and within the set budget under the contract.

BUDGET

The budget is attached as a separate document.
