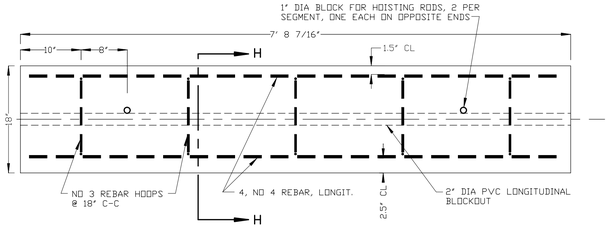
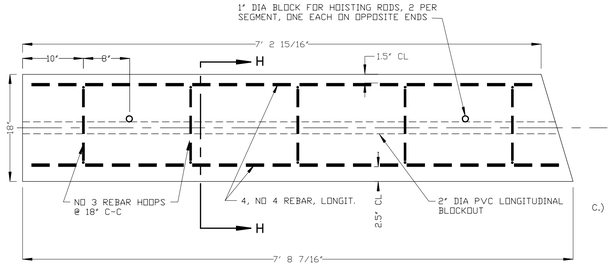
GENERAL NOTES



DETAIL TT
PRECAST RECTANGULAR AIR VENT & STEM CASING SUPPORT
(8 EACH)



DETAIL UU
PRECAST UPSTREAM AIR VENT & STEM CASING SUPPORT
(1 PIECE)

A.) DESIGN, FABRICATION AND CONSTRUCTION OF ALL ELEMENTS ARE SUBJECT TO THE PROVISIONS AND REQUIREMENTS OF THE COLORADO DEPARTMENT OF NATURAL RESOURCES, DIVISION OF WATER RESOURCES, OFFICE OF THE STATE ENGINEER, "RULES AND REGULATIONS FOR DAM SAFETY AND DAM CONSTRUCTION", LATEST EDITION, AND THE PROVISIONS OF THE UNIFORM BUILDING CODE, LATEST EDITION. THE PLANS AND SPECIFICATIONS CANNOT BE SIGNIFICANTLY CHANGED WITHOUT THE PRIOR WRITTEN APPROVAL OF THE STATE ENGINEER. CONSTRUCTION SHALL NOT BE CONSIDERED COMPLETE UNTIL THE STATE ENGINEER HAS ACCEPTED THE CONSTRUCTION IN WRITING.

B.) CONCRETE:
1.) ALL CONCRETE SHALL HAVE A 28 DAY MINIMUM COMPRESSIVE STRENGTH OF 3,000 PSI. TESTING OF CONCRETE STRENGTH SHALL BE PERFORMED BY A TESTING LABORATORY CERTIFIED UNDER THE ACI CERTIFICATION REQUIREMENTS. MIX DESIGN SHALL PROVIDE 5 1/2% +/- 1 1/2% ENTRAINED AIR, 3/4" MAXIMUM AGGREGATE SIZE, MAXIMUM 4" SLUMP AND SULFATE RESISTANT. IF FLY ASH IS USED IT SHALL BE CLASS F WITH A MAXIMUM CEMENT REPLACEMENT OF 20% BY WEIGHT UNLESS OTHERWISE APPROVED. COMPRESSIVE STRENGTH OF THE FLY ASH MIX SHALL NOT EXCEED THE 28 DAY COMPRESSIVE STRENGTH OF AN EQUIVALENT, ALL-CEMENT MIX.
2.) ALL CONCRETE ITEMS SHALL BE PRECAST IN A TEMPERATURE CONTROLLED SHOP. UNLESS STEAM CURED, CONCRETE SHALL BE CURED FOR THE FIRST 24 HOURS AFTER PLACEMENT IN AN AMBIENT TEMPERATURE BETWEEN 50 AND 90 DEGREES FARENHEIT. CONCRETE SHALL BE TRANSPORTED, MIXED, PLACED, CURED AND TESTED IN ACCORDANCE WITH ACI 318, LATEST EDITION. ALL TEST CYLINDERS SHALL BE TAKEN AT THE POINT OF CONCRETE PLACEMENT BY A REPRESENTATIVE OF THE TESTING LABORATORY. A MINIMUM OF ONE SET OF TEST CYLINDERS SHALL BE TAKEN FOR EACH 30 CUBIC YARDS OR EACH PLACEMENT. CYLINDER SETS SHALL CONSIST OF (7) CYLINDERS WITH ONE (1) TESTED AT 7 DAYS, TWO (2) TESTED AT 28 DAYS AND ONE (1) HELD FOR POSSIBLE FUTURE TESTING IF THE STRENGTH AT 28 DAYS DOES NOT MEET OR EXCEED THE SPECIFIED STRENGTH REQUIREMENTS. THE REMAINING THREE (3) CYLINDERS WILL BE GIVEN TO THE ENGINEER FOR QUALITY ASSURANCE TESTING.
3.) ALL REINFORCING BARS SHALL CONFORM TO ASTM SPECIFICATIONS A-615, GRADE 60.
4.) THREADED REINFORCING BARS SHALL CONFORM TO ASTM SPECIFICATIONS A-615, MINIMUM GRADE 60. THREADED BARS AND ALL APPURTENANT NUTS, COUPLING WASHERS BEARING PLATES AND OTHER FITTINGS SHALL BE STAINLESS STEEL, GALVANIZED OR EPOXY COATED. POST-TENSIONING THREADED BARS SHALL BE INSTALLED IN THE OPENINGS INDICATED WITH ALL COUPLINGS AND NUTS FULLY ENGAGED AS RECOMMENDED BY THE MANUFACTURER PRIOR TO TENSIONING. ALL COUPLINGS SHALL BE INSTALLED WITH FULLY TORQUED JAM NUTS AT EACH END OF THE COUPLING SO THAT THE BAR CAN BE ROTATED DURING INSERTION WITHOUT LOOSENING THE COUPLING. TENSIONING SHALL BE PERFORMED PRIOR TO ATTACHMENT OF PIPES, CASINGS, OR OTHER ITEMS WHICH COULD BE DAMAGED BY OR INTERFERE WITH THE TENSIONING MOVEMENTS. POST-TENSIONING BARS SHALL BE TENSIONED AFTER INSTALLATION OF THE PRECAST CONCRETE SUPPORT SEGMENTS FOR THE AIR VENT AND GATE STEM CASING, BUT PRIOR TO TORQUING WEDGE ANCHOR BOLTS FOR THE AIR VENT AND GATE STEM BRACKETS. THE THREADED REBAR END NUTS AT BOTH EXPOSED ENDS SHALL BE TORQUED TO 330 FT-LBS, OR AS DIRECTED BY THE ENGINEER. AFTER TORQUING OF THE THREADED REBAR IS COMPLETE, THE BRACKET NUTS SHALL BE TORQUED TO APPROXIMATELY 30 FT-LBS AND THE NEOPRENE GASKETS OR NEOPRENE CUSHIONS SHALL BE COVERED WITH CAULKING. EXPOSED ENDS OF POST-TENSIONED BARS SHALL BE COATED AS SPECIFIED HEREIN.
5.) MINIMUM CLEAR CONCRETE PROTECTION FOR REINFORCEMENT SHALL BE 1.5".
6.) NO SPLICES OF REINFORCEMENT SHALL BE MADE EXCEPT AS DETAILED OR AUTHORIZED BY THE ENGINEER. WELDING OF REINFORCEMENT WILL NOT BE ALLOWED. THE MINIMUM LENGTH OF LAP FOR SPLICING SHALL BE IN ACCORDANCE WITH ACI 315, LATEST EDITION. SPLICES ARE TO BE MADE SO THAT THE CIVEN DISTANCE TO THE FACE OF THE CONCRETE WILL BE MAINTAINED.
7.) ANY DAMAGE DONE TO CONCRETE BY THE ACTIVITIES OF THE CONTRACTOR WHICH, IN THE OPINION OF THE ENGINEER CAN BE REMEDIED BY A LOCALIZED REPAIR SHALL BE REPAIRED WITH EPOXY MORTAR. AREAS TO BE REPAIRED SHALL BE PREPARED BY CHIPPING OR CUTTING OUT THE DEFECTIVE CONCRETE TO SOUND CONCRETE WITHOUT VOIDS, CRACKS OR OTHER DEFECTS. THE CONCRETE SUBSTRATE SHALL BE CLEANED OF ALL STANDING WATER, LAITANCE, DUST, GREASE, FOREIGN PARTICLES AND OTHER CONTAMINANTS. EPOXY MORTAR SHALL BE SIKADUR 23 LO-MOD GEL (2-COMPONENT) OR APPROVED EQUIVALENT MOISTURE TOLERANT, LOW-MODULUS, NON-SAG EPOXY MORTAR, FOR PATCHED AREAS LESS THAN 1/2" IN DEPTH THE MORTAR SHALL NOT BE AMENDED WITH SAND OR OTHER AGGREGATE. THE SURFACE SHALL BE TROWEL FINISHED SMOOTH AND EVEN, FLUSH WITH THE SURFACE OF THE CONCRETE. INSTALL IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS. CONCRETE DAMAGE WHICH, IN THE OPINION OF THE ENGINEER, CANNOT BE REMEDIED WITH A LOCALIZED REPAIR SHALL BE REPAIRED IN ACCORDANCE WITH THE INSTRUCTIONS OF THE ENGINEER. THE CONTRACTOR SHALL BEAR ALL COSTS ASSOCIATED WITH ANY CONCRETE REPAIR INCLUDING, BUT NOT LIMITED TO ENGINEERING COSTS, MATERIALS, EQUIPMENT AND LABOR.
8.) CHAMFER EDGES OF PERMANENTLY EXPOSED CONCRETE WITH A 45° BEVEL 3/4" X 3/4".
9.) UNLESS OTHER RADIUS BENDS ARE NOTED ON THE DESIGN DRAWINGS, ALL REINFORCEMTNE REQUIRING BENDING SHALL BE BENT AROUND A PIN HAVING THE FOLLOWING DIAMETER.

TABLE OF PIN DIAMETERS IN INCHES

BAR NO.	3	4	5	6	7	8	9	10	11	14	15
STANDARD BENDS	2½	3	3½	6	7	8	10	11½	12½	17	22½
STIRRUP AND TIE BENDS	1½	2½	2½	5½	7	8	10	11½	12½		

10.) BAR SUPPORTS, SPACERS, AND OTHER ACCESSORIES ARE NOT SHOWN ON THE DESIGN DRAWINGS. THE RECOMMENDATIONS OF ACI 315 SHALL BE FOLLOWED AS STANDARD PRACTICE AND AS APPLICABLE.
11.) PRECAST ITEMS WHICH HAVE MATING SURFACES (SUCH AS THE ENDS OF VENT/CASING SUPPORTS) SHALL HAVE ABUTING SURFACES WHICH ARE SMOOTH, FLAT AND EITHER PERPENDICULAR TO THE AXIS OF THE ITEM OR AT THE ANGLE INDICATED WITH DEVIATIONS BETWEEN THE MINIMUM AND MAXIMUM POINTS OF NO MORE THAN 1/8 INCH. WHEN ABUTING ADJACENT SEGMENTS OF THE VENT/CASING SUPPORT, CARE SHALL BE TAKEN TO KEEP THE CONCRETE AND GASKET SURFACES FREE FROM DIRT, OIL OR OTHER FORIEGN SUBSTANCES. PROVISIONS SHALL BE MADE TO PROTECT DIRT FROM THE JOINT DURING PLACEMENT AND ALIGNMENT OF ADJACENT SEGMENTS. EVERY EFFORT SHALL BE MADE TO EXACTLY ALIGN THE SEGMENTS SO THAT THE TOP AND SIDE SURFACES OF THE CONCRETE FOLLOW A STRAIGHT LINE.

C.) STEEL:
1.) ALL STRUCTURAL STEEL ROLLED SHAPES AND PLATES SHALL CONFORM TO ASTM SPECIFICATIONS A-36, LATEST EDITION. FLANGED DUCTILE IRON PIPE AND FITTINGS SHALL CONFORM TO ANSI/AWWA C110 LATEST EDITION. MECHANICAL JOINT DUCTILE IRON PIPE AND FITTINGS SHALL CONFORM TO ANSI/AWWA C110 OR C153, LATEST EDITION. STEEL PIPE SHALL CONFORM TO ASTM A-53, LATEST EDITION.
2.) BOLTED SHOP AND FIELD CONNECTIONS BETWEEN MILD STEEL ELEMENTS SHALL BE MADE WITH ASTM A-325 HIGH STRENGTH BOLTS IN TYPE N CONNECTIONS UNLESS OTHERWISE SHOWN.
3.) WELDED SHOP AND FIELD CONNECTIONS BETWEEN MILD STEEL ELEMENTS SHALL BE MADE WITH AWS A-5.1 OR A-5.5 CLASS E70 ELECTRODES OR EQUIVALENT SUBMERGED ARC UNLESS OTHERWISE SHOWN.
4.) ALL WELDERS SHALL HAVE EVIDENCE OF PASSING THE APPLICABLE AWS STANDARD QUALIFICATION TESTS.
5.) ALL STAINLESS STEEL ITEMS SHALL BE TYPE 304 AND SHALL CONFORM TO ASTM SPECIFICATIONS A-240, LATEST EDITION OR ASTM SPECIFICATIONS A-276, AS APPLICABLE. WELDS SHALL BE MADE WITH AWS A-5.4 CLASS E308 ELECTRODES OR EQUIVALENT SUBMERGED ARC UNLESS OTHERWISE NOTED.
6.) FABRICATION AND ERECTION SHALL BE IN ACCORDANCE WITH THE AISC SPECIFICATION AND CODE OF STANDARD PRACTICE, LATEST EDITIONS.
7.) CONNECTIONS WHICH WILL BE SUBJECT TO WET OR SUBMERGED CONDITIONS SHALL BE MADE WITH TYPE 304 STAINLESS STEEL BOLTS AND NUTS. BOLTS SHALL CONFORM TO ASTM A193 GRADE B8, BOLTS SHALL BE OF THE SPECIFIED DIAMETER WITH TYPE N CONNECTIONS UNLESS OTHERWISE SHOWN. ALL STAINLESS STEEL BOLTS AND NUTS SHALL BE LUBRICATED WITH AN APPROVED ANTI-SEIZE/ANTI-GALLING COMPOUND SUCH AS CRC COPPER ANTI-SEIZE PRIOR TO ASSEMBLY.
8.) ALL FABRICATED EXPOSED STEEL ITEMS SHALL BE COATED WITH TWO COATS OF COAL TAR EPOXY TO A FINAL MINIMUM THICKNESS OF 18 MILS. COATING SHALL BE PERFORMED IN ACCORDANCE WITH ALL RECOMMENDATIONS OF THE MANUFACTURER INCLUDING STEEL SURFACE PREPARATION MIXING, COATING APPLICATION, CURING, ETC. SURFACES TO BE COATED INCLUDE THE TRASHRACK.
9.) ALL NON-FABRICATED EXPOSED STEEL ITEMS SHALL BE COATED WITH TWO COATS OF POR-15 OR APPROVED EQUIVALENT RUST PREVENTIVE COATING. COATING SHALL BE PERFORMED IN ACCORDANCE WITH ALL RECOMMENDATIONS OF THE MANUFACTURER INCLUDING STEEL SURFACE PREPARATION MIXING, COATING APPLICATION, CURING, ETC. SURFACES TO BE COATED INCLUDE EXPOSED ENDS OF THREADED BARS AND THREADED BAR APPURTENANCES, END GRAIN AND VOIDS AND VOIDS EMBEDED IN CONCRETE.
10.) BOLTS FOR PIPE FITTINGS WHICH WILL BE EXPOSED TO SOIL SHALL EITHER CONSIST OF STAINLESS STEEL BOLTS OR SHALL BE COATED WITH A BITUMINOUS PAINT-ON (NON-AEROSOL) COATING SUCH AS POR-15 RUST PREVENTIVE COATING OR APPROVED EQUIVALENT, COMBINED WITH WRAPPING THE FITTINGS WITH POLYETHELYENE SHEETING (MIN 10 MIL THICKNESS).
11.) ALL HOLES TO ACCOMMODATE BOLTS SHALL BE DRILLED (NOT TORCH-CUT) WITH BITS SIZED ACCORDING TO ASME STANDARDS FOR FREE-FIT CONNECTIONS FOR THE APPLICABLE BOLT SIZE. ALL BOLTS AND NUTS SHALL BE TORQUED IN THE FOLLOWING ORDER OF PRIORITY: AS INDICATED IN THE CONSTRUCTION DRAWINGS AND DOCUMENTS, TO THE MANUFACTURER'S RECOMMENDATIONS, TO 50% OF THEIR YIELD STRENGTH.
12.) ALL WEDGE ANCHOR BOLTS AND DROP-IN ANCHOR INSERTS SHALL BE INSTALLED IN HOLES DRILLED WITH A BIT THE SAME SIZE AS THE ANCHOR DIAMETER OR AS OTHERSIZE SPECIFIED BY THE MANUFACTURER. HOLES SHALL BE DRILLED TO A DEPTH EXCEEDING THE SPECIFIED EMBEDMENT DEPTH. HOLES SHALL BE CLEANED OF ALL DRILL CUTTINGS AND OTHER LOOSE DEBRIS TO A DEPTH AT LEAST 1/2 INCH GREATER THAN THE EMBEDMENT DEPTH. THE NUT AND ALL WASHERS SHALL BE PLACED ON ANCHOR BOLTS LEAVING THE NUT FLUSH WITH THE END OF THE ANCHOR TO PROTECT THE THREADS OR BELOW THE END OF THE ANCHOR IF IT IS FOUND THAT DRIVING THE ANCHOR HOME JAMS THE NUT, THE ANCHOR OR INSERT SHALL BE DRIVEN TO AT LEAST THE SPECIFIED EMBEDMENT DEPTH. INSERTS SHALL BE INSTALLED USING THE MANUFACTURER'S RECOMMENDED SETTING TOOL. ANCHOR BOLTS AND INSERTS SHALL BE EXPANDED BY TIGHTENING THE NUT OR BOLT TO THE SPECIFIED TORQUE OR, IF NO TORQUE IS SPECIFIED, TIGHTENING 3 TO 5 TURNS PAST THE HAND-TIGHT POSITION.

C.) PIPE:
1.) ALL FITTINGS AND VALVES WHICH WILL BE EXPOSED TO SOIL OR GROUNDWATER SHALL BE ENCASED IN POLYETHYLENE IN ACCORDANCE WITH ANSI/AWWA C105/A21.5. THESE ITEMS SHALL INCLUDE THE REPAIR COUPLING.
2.) PIPE BEDDING AND BACKFILL IN CONTACT WITH THE PIPE SHALL BE FREE FROM ALL ROCK LARGER THAN 3/4 ".
3.) THE REPAIR COUPLING JOINING THE INTAKE STRUCTURE PIPE TO THE EXISTING OUTLET PIPE SHALL BE AN 8 INCH COUPLING AS MANUFACTURED BY HYMAX OR EQUAL. THE EXISTING PIPE SHALL BE PREPARED TO RECEIVE THE COUPLING BY EXPOSING A SUFFICIENT LENGTH OF THE END OF THE PIPE AND REMOVING ALL RUST, SCALE, MUD, SURFACE ROUGHNESS, ETC. BY GRINDING, WIRE BRUSHING AND/OR OTHER MEANS TO ASSURE A POSITIVE GASKET SEAL TO THE PIPE.
4.) SLOTTED PVC PIPE SHALL BE MACHINE SLOTTED WITH 0.020" WIDE SLOTS SPACED NO MORE THAN 0.25", 4 ROWS OF SLOTS, SLOTTED FULL LENGTH WITH A MINIMUM SLOT OPEN AREA OF 8 SQ IN/FT.
5.) THE EXISTING BELL ON THE UPSTREAM END OF THE EXISTING PIPE SHALL BE REMOVED BY SAW-CUTTING IN SUCH A MANNER THAT THE REMAINING PIPE END IS SMOOTH AND SQUARE TO THE AXIS OF THE PIPE. THE INTERIOR PORTION OF THE EXTERIOR OF THE EXISTING PIPE WHICH WILL MATE WITH THE REPAIR COUPLING SHALL BE GROUND TO REMOVE ALL RUST, ENCRUSTATIONS AND DEPOSITS TO BE AS SMOOTH AND UNIFORM AS POSSIBLE TO ALLOW SEALING WITH THE REPAIR COUPLING.

D.) EXCAVATION, SUBGRADE, FILL AND COMPACTION:
1.) SUBGRADE, FILL AND BACKFILL, SHALL BE COMPACTED TO AT LEAST 95% STANDARD PROCTOR DENSITY (ASTM D-698) OR AS DIRECTED BY THE ENGINEER.
2.) IT IS ANTICIPATED THAT SOIL REMOVED FROM EXCAVATIONS REQUIRED FOR THE WORK WILL BE TOO WET TO BE RE-USED AS BACKFILL. NATIVE BACKFILL MATERIAL SHALL BE OBTAINED FROM THE DESIGNATED BORROW AREA.
3.) BACKFILL AGAINST WALLS AND PIPES WHICH ARE BACKFILLED ON BOTH SIDES SHALL BE BROUGHT UP UNIFORMLY ON BOTH SIDES, UNBALANCED BACKFILL ELEVATIONS SHALL NOT EXCEED 8 INCHES.
4.) FILTER SAND SHALL CONFORM TO THE REQUIREMENTS OF ASTM C 33, CONCRETE SAND (FINE AGGREGATE). FILTER SAND SHALL BE CONSOLIDATED BY FULLY SATURATING THE SAND AND VIBRATING IT WITH A CONCRETE VIBRATOR. VIBRATION SHALL BE PERFORMED UNDER THE DIRECT SUPERVISION OF THE ENGINEER AND SHALL CONSIST OF THE MINIMUM EFFORT NEEDED TO ASSURE THAT NO VOIDS OR GAPS EXIST IN THE SAND OR IN THE CONTACT ZONE BETWEEN THE SAND AND ADJACENT ITEMS. PLACEMENT AND CONSOLIDATION OF SAND AROUND PIPES, FITTINGS AND OTHER APPRUTENANCES SHALL BE PERFORMED IN A MANNER SUCH THAT THE SAND SHALL BE UNIFORMLY IN CONTACT WITH THE ENTIRE PERIMETER OF THE PIPE OR ADJACENT SURFACE. PIPE SHALL BE RESTRAINED AGAINST MOVEMENT DURING PLACEMENT AND CONSOLIDATION OF THE SAND.
5.) GRANULAR STABILIZATION/DRAINAGE MATERIAL SHALL CONSIST OF CLEAN GRAVEL WITH 100 PERCENT PASSING A 3" SCREEN AND LESS THAN 10 PERCENT PASSING A NO. 4 SIEVE. STABILIZATION/DRAINAGE GRAVEL SHALL BE CONSOLIDATED BY FULLY SATURATING THE GRAVEL AND VIBRATING IT WITH A CONCRETE VIBRATOR. OR VIBRATORY PLATE COMPACTOR. VIBRATION AND/OR COMPACTION SHALL BE PERFORMED UNDER THE DIRECT SUPERVISION OF THE ENGINEER PLACEMENT AND CONSOLIDATION OF GRAVEL AROUND CONCRETE, PIPES, FITTINGS AND OTHER APPURTENANCES SHALL BE PERFORMED IN A MANNER SUCH THAT THE GRAVEL SHALL BE UNIFORMLY IN CONTACT WITH THE ENTIRE SURFACE OF THE ITEM.

D.) EXCAVATION, SUBGRADE, FILL AND COMPACTION (CONTINUED):
6.) EXCAVATION FOR PLACEMENT OF THE INTAKE STRUCTURE SHALL BE MADE AT SLOPES NO STEEPER THAN REQUIRED TO MAINTAIN STABLE BANKS AND SAFE WORKING CONDITIONS. THE SLOPES SHOWN ON THE DRAWINGS ARE FOR ILLUSTRATION PURPOSES ONLY. IF THE SLOPES SHOW SIGNS OF MOVEMENT, FORMATION OF TENSION CRACKS OR OTHER INDICATIONS OF SLOPE INSTABILITY, THE EXCAVATION CUT SHALL BE LAID BACK TO SLOPES WHICH ARE SUFFICIENTLY FLAT TO WILL REMAIN STABLE. EXCAVATION SLOPES FOR MODIFICATION OF THE EXISTING GATE VALVE AND PLACEMENT OF SAND DRAINS ARE INTENDED TO BE MADE AS STEEP AS POSSIBLE WHILE ACHIEVING WORKER SAFETY AND SLOPE STABILITY. TEMPORARY SHORING MAY BE REQUIRED TO PROVIDE SAFETY AND STABILITY.
7.) COMPACTION WITH HEAVY EQUIPMENT SHALL NOT BE PERFORMED WITHIN 5 FEET FROM THE BACKFILLED FACE OF ANY CONCRETE WALLS. DURING BACKFILL AND BACKFILL COMPACTION BEHIND WALLS. WALLS SHALL BE CAREFULLY MONITORED FOR MOVEMENT OR DISTRESS. IF, IN THE OPINION OF THE ENGINEER, WALL MOVEMENT OR DISTRESS BECOMES TOO GREAT, BACKFILL AND COMPACTION PROCEDURES SUCH AS LIFT THICKNESS, COMPACTION EQUIPMENT WEIGHT OR APPLIED ENERGY, ETC SHALL BE MODIFIED TO MINIMIZE FURTHER WALL MOVEMENT.
8.) ANY WORKING PADS REQUIRED FOR STAGING EXCAVATING EQUIPMENT SHALL BE CONSTRUCTED ENTIRELY OF FILL MATERIAL. UNLESS APPROVED BY THE ENGINEER, NO EXCAVATION WILL BE ALLOWED FOR CONSRUCTION OF PADS AND ANY EXCAVATION MADE FOR SUCH PURPOSES SHALL BE FILLED WITH COMPACTED BACKFILL.
9) EXCAVATION IN THE BORROW AREA SHALL BEGIN ALONG THE SOUTH BANK OF THE SPILLWAY IN THE LOCATION SHOWN ON THE DRAWINGS AND SHALL PROCEED IN A MANNER THAT WIDENS THE SPILLWAY CHANNEL AT APPROXIMATELY THE SAME SLOPE AS THE EXISTING SPILLWAY BANK, AS DIRECTED BY THE ENGINEER. BORROWING SHALL BE LIMITED TO THE SPILLWAY BANK ONLY. ALL EXCAVATION SPOIL WHICH IS NOT USEABLE IN THE WORK SHALL BE SPREAD IN THE DESIGNATED BORROW AREA OUTSIDE OF THE SPILLWAY CHANNEL, AS DIRECTED BY THE ENGINEER. THE CONTRACTOR SHALL SHAPE THE FINAL SURFACE COUTOURS IN THE DESIGNATED BORROW AREA TO CONFORM TO THE SPILLWAY CHANNEL AND THE SURROUNDING TERRAIN AND TO PROVIDE UN-OBSTRUCTED SURFACE DRAINAGE WITHOUT STEEP DRAINAGE PATHS OR POOLS. COFFERDAMS SHALL BE COMPLETELY REMOVED AFTER THEY ARE NO LONGER NEEDED, THE SPOIL MATERIAL RESULTING FROM COFFERDAM REMOVAL SHALL BE DISPOSED OF IN THE DESIGNATED BORROW AREA IN ACCORDANCE WITH THESE REQUIREMENTS.

E.) GENERAL:
1.) FOR ANY CONDITION OF CONFLICT OF INFORMATION IN THE CONSTRUCTION DOCUMENTS, THE MORE STRINGENT CONDITION SHALL PREVAIL.
2.) THE ENGINEER'S APPROVAL MUST BE OBTAINED FOR ANY DEVIATIONS FROM THE PLANS. THE ENGINEER MONITORING THE CONSTRUCTION FOR THE OWNER IS RESPONSIBLE TO THE STATE ENGINEER FOR THE QUALITY OF CONSTRUCTION, COMPLIANCE WITH THE APPROVED DESIGN AND SPECIFICATIONS, PREPARATION OF THE NECESSARY DOCUMENTATION FOR THE STATE ENGINEER'S REVIEW AND APPROVAL OF ALL CONSTRUCTION CHANGE ORDERS, AND PREPARATION OF THE PROJECT COMPLETION DOCUMENTS. ANY UNAUTHORIZED MODIFICATIONS ARE THE RESPONSIBILITY OF THE PERSON MAKING THE CHANGE TO UNCOVER, REMOVE, REPLACE OR OTHERWISE CONFIRM THEY MEET THESE REQUIREMENTS. ALL WORK SHALL BE CONDUCTED IN THE PRESENCE OF THE ENGINEER UNLESS OTHERWISE AUTHORIZED IN ADVANCE BY THE ENGINEER. AT THE ENGINEER'S DISCRETION, ANY WORK PERFORMED WITHOUT THE ENGINEER PRESENT SHALL, AT THE CONTRACTOR'S EXPENSE, BE UNCOVERED, TESTED, OR ITS CONDITION OTHERWISE VERIFIED TO SHOW, TO THE ENGINEER'S SATISFACTION, WHETHER THE REQUIREMENTS OF THE DRAWINGS AND CONTRACT DOCUMENTS WERE SATISFIED.
3.) DETAILS APPLY TO ANY LOCATION WHICH HAS CONDITIONS SIMILAR TO THE CONDITIONS WHERE THE DETAIL IS CUT.
4.) ALL ELEVATIONS ARE REFERENCED TO AN ELEVATION ESTABLISHED FOR A U.S. BUREAU OF RECLAMATION BRASS CAP BENCH MARK LOCATED SOUTH OF THE SOUTH DAM ABUTMENT. THE ENGINEER WILL ESTABLISH ALL LOCAL REFERENCE POINTS NEEDED FOR THE WORK.
5.) THE SEQUENCE OF CONSTRUCTION SHALL INLCUDE INSTALLING THE INTAKE STRUCURE AND GATE PRIOR TO UNCOVERING AND MODIFYING THE BURIED GATE VALVE SO THAT THE OUTLET PIPE CAN BE FULLY DEWATERED WHEN THE BURIED GATE VALVE EXCAVATION IS MADE.
6.) THE CONTRACTOR IS ADVISED THAT THE DAM EMBANKMENT SLOPES AND SURRDUNDING AREAS ARE EXPECTED TO BE WET, SOFT AND SLICK. STABILIZATION OF THESE AREAS MAY BE REQUIRED FOR CONSTRUCTION ACCESS AND SUITABLE WORKING AREAS.
7.) GEOTEXTILE FABRIC FOR DRAINAGE, STABILIZATION OR BARRIER SHALL BE MIRAFI HP 270 OR EQUAL AND SHALL BE PLACED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS. UNLESS OTHERWISE SHOWN OR APPROVED, SPLICE LAPS SHALL BE MINIMUM 24" AND SHALL BE PINNED AT INTERVALS NO LESS THAN 10 FEET.
8.) THE OUTLET GATE SHALL BE 8" DIAMETER WATERMAN P-30 FF, FLANGED BACK WITH FLANGES FACED AND DRILLED IN ACCORDANCE WITH ASME/ANSI B 16.1, CLASS 125, STAINLESS STEEL RISING STEM, BRONZE SEATS, MINIMUM 60 FOOT SEATING HEAD AND MINIMUM 10 FOOT UNSEATING HEAD, OR EQUAL.
9.) SHEET MATERIAL FOR FLAT RUBBER SEALS AND GASKETS SHALL CONSIST OF NATURAL RUBBER OR SOFT NEOPRENE OF THE THICKNESS INDICATED WITH A SHORE A DUROMETER BETWEEN 35 AND 45. DURING PLACEMENT OF SEALS AND GASKETS, ONE SIDE SHALL BE GLUED TO ITS MATING SURFACE TO HOLD IT IN PLACE WHILE THE SECOND MATING SURFACE IS PLACED AGAINST IT. CARE SHALL BE TAKEN THAT THE SURFACE OF THE NEOPRENE IS FREE FROM DIRT, GREASE, SAND OR ANY OTHER DELETERIOUS MATERIAL PRIOR TO MATING WITH THE ADJACENT SURFACE. NEOPRENE ADHESIVE SHALL BE 3M SCOTCH WELD NEOPRENE HIGH PERFORMANCE CONTACT ADHESIVE 1357 OR APPROVED EQUAL, SHALL BE APPLIED TO BOTH SURFACES AND APPLIED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS. AT THE JOINTS WHERE PRECAST AIR VENT/GATE STEM CASING SUPPORT SEGMENTS MEET, A SMALL VOID SHALL BE EXCAVATED UNDER THE JOINT TO PREVENT DIRT FROM CONTAMINATING THE CONTACT BETWEEN THE NEOPRENE CUSHION AND THE CONCRETE DURING INSTALLATION.
10.) STAFF GAUGE NUMBER PLATES SHALL BE PORCELAIN ENAMEL COATED PLATES, BLACK NUMERALS ON A WHITE BACKGROUND. THEY SHALL BE INSTALLED AT THE ELEVATIONS AS DIRECTED BY THE ENGINEER AND SHALL BE IN ONE FOOT INCREMENTS STARTING AT THE NUMERAL ONE AND CONTINUING THROUGH TWENTY-TWO. THE PLATES SHALL BE SECURED TO THE VENT/CASING SUPPORT WITH 1/4" X 1 3/4" LONG STAINLESS STEEL WEDGE ANCHORS - TWO PER PLATE.
11.) DIVERSION OF FLOWING WATER AND GROUND WATER WILL BE REQUIRED SO THAT EXCAVATION, INSTALLATION AND BACKFILL OF THE INTAKE STRUCTURE CAN BE DONE IN THE DRY. THE ENTIRE WORK AREA DOWN TO AT LEAST THE SURFACE OF THE STABILIZATION MATERIAL SHALL BE MAINTAINED FREE FROM STANDING OR FLOWING WATER NON-STOP FROM THE TIME THAT EXCAVATION COMMENCES UNTIL THE INTAKE STRUCTURE IS COMPLETELY INSTALLED AND BACKFILLED TO A LEVEL ABOVE THE TOP OF THE HIGHEST POINT OF THE INTAKE STRUCTURE. FOR THE CONTRACTOR'S INFORMATION, THE FLOW IN WEST LEROUX CREEK CAN VARY WIDELY ON A SEASONAL BASIS. DURING LATE SUMMER AND FALL THE FLOW IS TYPICALLY BETWEEN 0.5 AND 1.0 CU FT/SEC BUT IS HIGHLY DEPENDENT ON RECENT AND CURRENT CLIMATIC CONDITIONS AT THE TIME. THE OWNERS INTEND TO MAKE EVERY EFFORT TO REDUCE THE FLOW DURING THE DIVERSION PERIOD BY MINIMIZING DISCHARGE FROM UPSTREAM RESERVOIRS. HOWEVER, IT IS THE CONTRACTOR'S RESPONSIBILITY TO BE FAMILIAR WITH THE LIKELY STREAM FLOW CONDITIONS AND AMOUNTS AT THE TIME OF DIVERSION AND TO PLAN HIS ACTIVITIES ACCORDINGLY. THE CONTRACTOR'S DIVERSION AND DEWATERING PLAN SHALL INCLUDE PROVISIONS FOR THE POSSIBILITY OF A SUDDEN AND SIGNIFICANT INCREASE IN STREAM FLOW DUE TO PRECIPITATION EVENTS. DIVERSION EFFORTS MAY CONSIST OF A COMBINATION OF COFFERDAMS, PUMPS, ETC. DIVERSION WORKS WILL BE LIMITED TO THE IMMEDIATE LOCATION OF THE INTAKE STRUCTURE UNLESS THE CONTRACTOR OBTAINS PRIOR WRITTEN APPROVAL FROM THE FOREST SERVICE OTHERWISE. THE INTAKE STRUCTURE SHALL BE INSTALLED WITH THE BYPASS PLUG REMOVED FROM THE STRUCTURE. THE FLOW CAPACITY OF THE INTAKE STRUCTURE'S 6" BYPASS IS ESTIMATED TO BE 1.3 CU FT/SEC WITH THE WATER LEVEL AT THE OVERFLOW LIP. IF THE CONTRACTOR FINDS THAT THE EXCAVATION FOR THE INTAKE STRUCTURE STABILIZATION INSTALLATION CAN BE PERFORMED WHILE MAINTAINING STABLE AND REASONABLY STEEP EXCAVATION SLOPES WITHOUT DEWATERING THE FOUNDATION TO SUBGRADE, PREPARING THE INTAKE STRUCTURE FOUNDATION WITHOUT DEWATERING BELOW THE BOTTOM OF THE INTAKE STRUCTURE WILL BE PERMISSIBLE. HOWEVER, IT WILL BE THE CONTRACTOR'S RESPONSIBILITY TO REPLACE ALL REMOVED AND DISTURBED MATERIAL WITH COMPACTED FILL AT HIS EXPENSE. ANY PUMP SUMPS SHALL BE HYDRAULICALLY CONNECTED TO THE STABILIZATION/DRAINAGE GRAVEL PLACED UNDER THE INTAKE STRUCTURE. AFTER TEMPORARY DIVERSION FEATURES SUCH AS COFFERDAMS, PUMP SUMPS, ETC. ARE NOT LONGER NEEDED, THEY SHALL BE FULLY REMOVED AND THE ORIGINAL SURFACE SHALL BE RESTORED TO THE ORIGINAL ELEVATIONS, GRADES AND CONTOURS. THE BYPASS PLUG SHALL BE INSTALLED IN THE BYPASS OPENING AFTER DIVERSION IS NO LONGER NEEDED. THE PERIMETER OF THE PLUG SHALL BE COATED WITH APPROVED WATERPROOF MARINE GREASE PRIOR TO INSERTION INTO THE DIVERSION OPENING.
12.) WHEREVER CALLED FOR ON THESE DRAWINGS, WATERPROOF SEALANTS AND CAULKING SHALL BE SIKAFLEX 1a (1-COMPONENT), SIKAFLEX 2c NS (2-COMPONENT), OR APPROVED EQUIVALENT POLYURETHANE BASED SEALANT SPECIFICALLY APPROVED BY THE MAN
