AG WATER SUMMIT

Jefferson County Fairgrounds

8:00 AM – 5:00 PM

Co-hosted by: Interbasin Compact Committee &
Colorado Ag Water Alliance

- Without acting, Colorado could lose up to an additional 700,000 acres of irrigated agricultural land by 2050
- The Colorado Water Plan recognizes that some acres will likely go out of production, and sets a goal for agriculture to keep pace with growing needs
- The plan points to Alternative Agricultural Transfer Methods (ATMs) as a potential solution to help alleviate traditional buy-and-dry, with a Measurable Objective of achieving 50,000 AF of voluntary ATMs by 2030
- After over 10 years of exploring ATM concepts we are well prepared to implement projects that provide continued irrigation and revenue to local agriculture, while intermittently supplying non-agricultural uses with important water deliveries
- *Come learn about the most promising ATM projects and tools to help advance further success in the field*
- *Please attend, If you have questions about ATMs or are interested in learning more*

Free Event, but Registration Required (includes lunch)

For registration and more information follow this link: [IBCC/CAWA Ag Water Summit](https://www.bccco.org/CAWA-Ag-Water-Summit)
