

Chilcott Augmentation Station Project

Chilcott Ditch Company

Substantially Complete October 1, 2019

Project Description

The Chilcott Ditch Company operates the Chilcott Ditch for the benefit of its shareholders by providing direct flow irrigation water. The ditch diverts from Fountain Creek, just north of the Town of Fountain, and water travels through the Company's eight-mile-long ditch to land under the ditch as well as to an augmentation station that measures return flow to Fountain Creek on behalf of shareholders taking delivery of their pro-rata share through the augmentation station. Over time, the streambank near the augmentation station has eroded and undercut the augmentation station flume. Structural stabilization and discharge functionality and operation of the augmentation station is complete. The Company stabilized the embankment and reconstructed the outfall and sand discharge line.
