Description: WPG GF; Jack's Solar Garden							
Jack's Solar Garden; This project will measure the variations in microclimates (e.g., temperature, light intensity, humidity, soil moisture, soil heat flux) underneath and around our solar array, especially as the array was designed with 2/3 of the panels elevated at 6ft and the other 1/3 elevated to 8ft to answer questions about optimal agrivoltaic design in CO. Researchers will study growing over 30 different types of vegetables, wildflower seed mixes, and prairie grasses to determine what vegetation grows best and requires less water due to the expected improvement in soil moisture retention.
