The Center for Western Weather and Water Extremes (CW3E), Colorado Mountain College (CMC), Yampa Valley Sustainability Council (YVSC), and the Upper Yampa Water Conservancy District (UYWCD) propose to install a soil moisture monitoring network of stations in the Upper Yampa Basin in order to connect relevant climate change science with local and regional water managers' goals to better align decision-making capacity, water use practices, and water supply in a changing future.

Phase I, Period 1 (2021) of developing the soil moisture monitoring network is to conduct a basin-wide analysis of the Upper Yampa basin to identify where soil moisture monitoring stations should be located in order to most effectively meet decision maker needs. Phase I, Period 2 (2022) also includes the installation of a pilot soil moisture monitoring station, and initial demonstrations of utility in the context of the existing observing network in the Upper Yampa, including snowpack and stream observations. Phase 1 provides the needed foundation from which to launch Phase 2 of the project, which includes locating and installing additional stations in the network, as well as capturing, storing, disseminating and interpreting the data in ways that provide decision-support services to water managers and users in the Basin.
