Hi Monty.

The loan application amount requested was not rounded to the nearest \$1000. As a result, I had to increase the loan amount so I would like to have in-writing that this is acceptable to you. The amount requested on the loan application is \$976,800.

You may respond to this email confirming this is acceptable to you and I will add this revision to your loan application. Thank you.

Sincerely,  
Rachel

Rachel,

The even amount of \$977,000.00 is acceptable to us. Thank you.

**Applicant:** Trinchera Subdistrict Water Activity Enterprise.

**Project Title:** Trinchera Unconfined Augmentation Well Pipeline

**Brief Description of Project:**

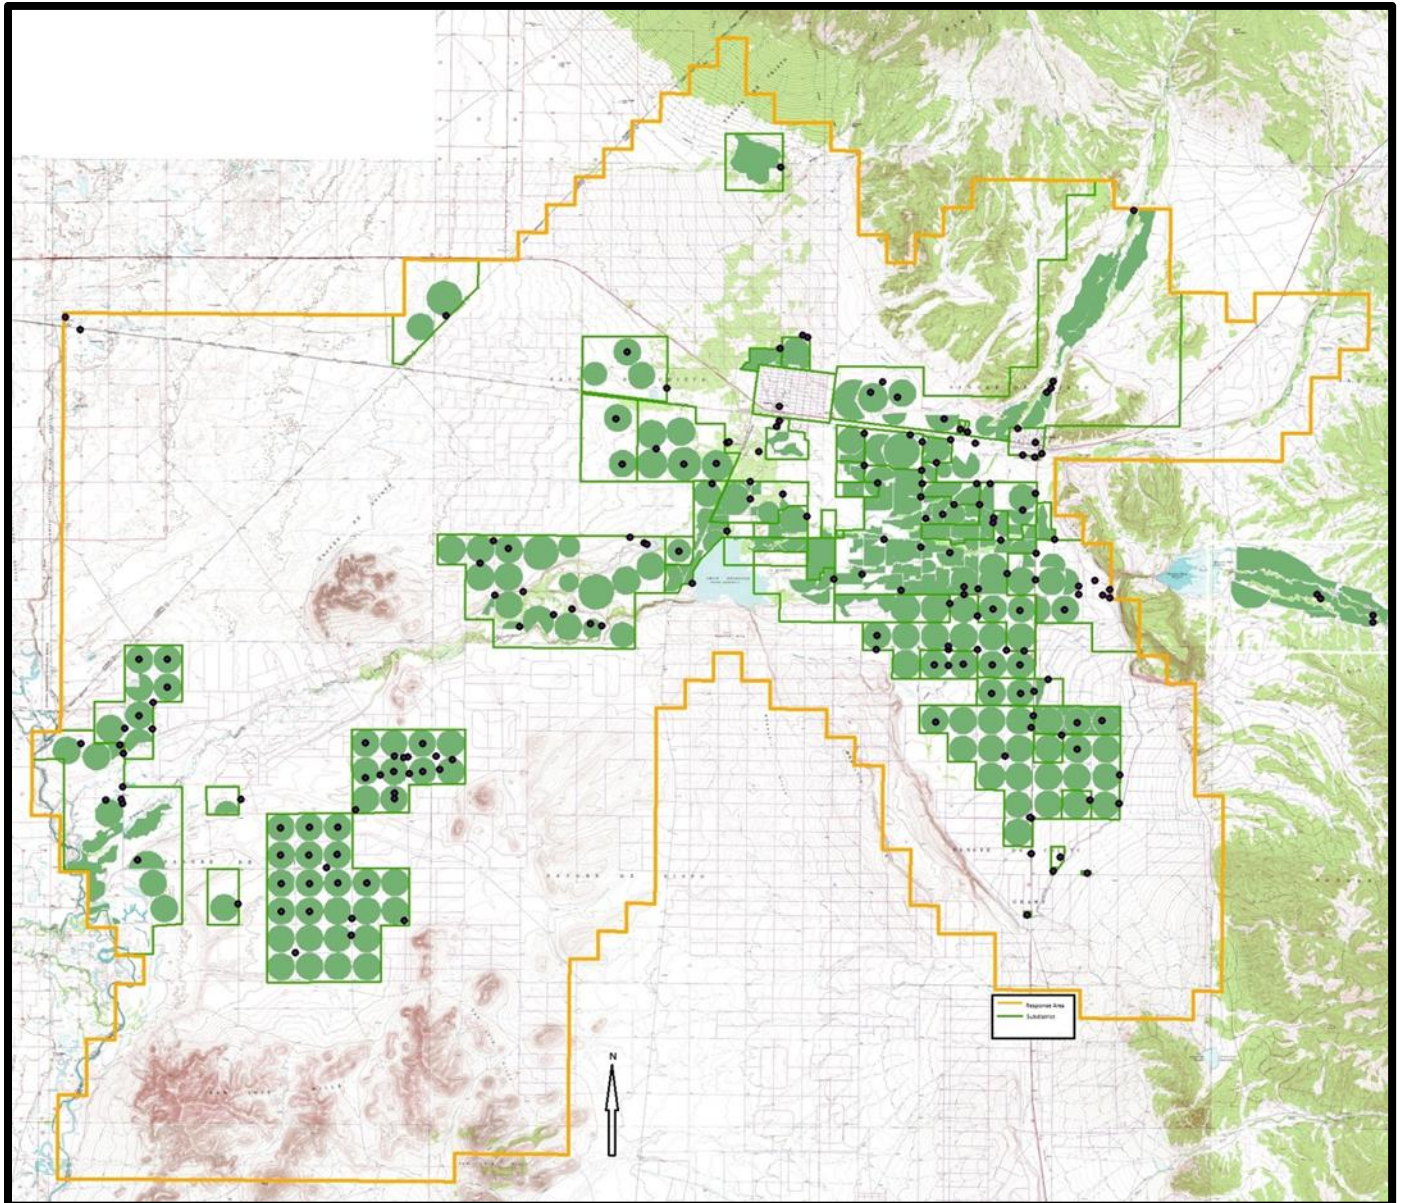

The Groundwater Management Subdistrict of the Trinchera Water Conservancy District (the “Trinchera Subdistrict” or “Subdistrict”)) is required under the terms of its approved groundwater management plan and its implementing annual replacement plans to replace injurious stream depletions from groundwater wells that are part of the Subdistrict. If the Subdistrict is unable to replace these injurious stream depletions eight commercial wells, three municipal wells and 163 irrigation wells will be forced to cease pumping.

In February of 2017 the Subdistrict established a water activity enterprise pursuant to C.R.S. § 37-45.1-101, et seq., to be known as the Trinchera Groundwater Management Subdistrict Water Activity Enterprise (the “Trinchera Subdistrict Water Activity Enterprise”). Trinchera Subdistrict acting buy and through the Water Activity Enterprise is requesting a loan in the amount of \$976,800.56 to construct a pipeline which would carry augmentation water for the Subdistrict for a fee from a series of unconfined wells to the Rio Grande River as replacement water in the Subdistrict’s annual replacement plans.

Well and Proposed Pipeline Locations

**Subdistrict and Response Function Boundaries**

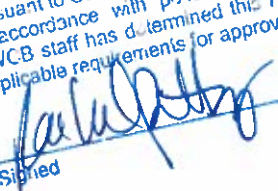

# Feasibility of Construction of Trinchera Unconfined Augmentation Well Pipeline

Sponsored by Groundwater Subdistrict of the Trinchera Water  
Concervancy District acting by and through its Water Activity Enterprise

In conjunction with the Colorado Water Conservation Board

September 2021

**FEASIBILITY STUDY APPROVAL**  
Pursuant to Colorado Revised Statutes 37-60-121 & 122, and  
in accordance with policies adopted by the Board, the  
CWCB staff has determined this Feasibility Study meets all  
applicable requirements for approval.

  
Signed \_\_\_\_\_ Date 11/1/2021

## Executive Summary

The Groundwater Management Subdistrict of the Trinchera Water Conservancy District (the “Trinchera Subdistrict” or “Subdistrict”)) is required under the terms of its approved groundwater management plan and its implementing annual replacement plans to replace injurious stream depletions from groundwater wells that are part of the Subdistrict. If the Subdistrict is unable to replace these injurious stream depletions eight commercial wells, three municipal wells and 163 irrigation wells will be forced to cease pumping.

In February of 2017 the Subdistrict established a water activity enterprise pursuant to C.R.S. § 37-45.1-101, *et seq.*, to be known as the *Trinchera Groundwater Management Subdistrict Water Activity Enterprise* (the “Trinchera Subdistrict Water Activity Enterprise”). Trinchera Subdistrict acting buy and through the Water Activity Enterprise is requesting a loan in the amount of \$976,800.56 to construct a pipeline which would carry augmentation water for the Subdistrict for a fee from a series of unconfined wells to the Rio Grande River as replacement water in the Subdistrict’s annual replacement plans. The source of the augmentation water stems from Trinchera Subdistrict’s authority to set an allocation limiting the consumptive use of its member wells for the purposes of reaching a sustainable aquifer, and such reductions may also provide a source of “dry-up” for use in a change case and or substitute water supply plan, on agreement with the owners of the associated water rights. Such water that is made available for replacement of depletions through said change is to be delivered to reach 3 of the Rio Grande River. In the Subdistrict there are 129 unconfined wells which have historic consumptive use that could be used as a source of “dry-up” such that augmentation well water is made available through an substitute water supply plan, a change case, and/or an alternative transfer method. In 2021 the Subdistrict used this method to obtain replacement water from confined wells on the western edge of the subdistrict but this source is limited as there are only 14 confined wells showing consumptive use since 2009. In the 2021 annual replacement plan dry up of 11 confined wells yielded 2178.75 acre-ft of consumptive use. Going forward it is expected that less than the 11 confined wells used in the 2021 plan will be available for dry up in a given year. On average the Subdistrict must replace depletions to the Rio Grande River and the Conejos River totaling 3,531 acre-ft.

A pipeline is needed to deliver this unconfined augmentation water as the wells identified for use are 5.5 miles from the river. The Trinchera Subdistrict Water Activity Enterprise will use the CWCB loan funds to construct the pipeline, and will operate the pipeline as a government owned business.

With respect to the source of funds for repayment of the CWCB loan, the Trinchera Subdistrict has entered into Class D Allotment contracts with the irrigation groundwater users pursuant to C.R.S. § 37-45-125 and with the municipal and commercial groundwater users pursuant to

C.R.S. § 37-45-131 under which they are required to make payments to the Subdistrict for the allocation of water that may be pumped and consumed under the Subdistrict's annual replacement plans. Operation of the pipeline by the Trinchera Subdistrict acting by and through its Water Activity Enterprise is a critical component of the Subdistrict's groundwater management plan and obtaining State Engineer approval of the annual replacement plans. Absent such annual approval of the annual replacement plan, none of the wells in the Subdistrict may operate. Consistent with C.R.S. § 37-45.1-102(2), 105(3), and 106, the Subdistrict may pay funds to the Trinchera Subdistrict Water Activity Enterprise in return for its provision of capacity in the pipeline to the Subdistrict and the payment of funds by the Subdistrict to the Trinchera Subdistrict Water Activity Enterprise for such services. The payment of such funds to the Trinchera Subdistrict Water Activity Enterprise will not constitute "grants" in violation of the enterprise exception of TABOR. The source of funds from the Subdistrict would be the payments made by groundwater users to the Subdistrict pursuant to C.R.S. §§ 37-45-125 and 131. The agreement between the Subdistrict and the Trinchera Subdistrict Water Activity Enterprise, however, will not constitute a general obligation of the District or Subdistrict, and will not require the Subdistrict to accept and pay the Trinchera Subdistrict Water Activity Enterprise for such capacity without regard to annual appropriation by the Subdistrict (in short, the obligation to make payment to the enterprise must be subject to annual appropriation by the Subdistrict). The Subdistrict and its constituents have a significant incentive to make the payments to the Trinchera Subdistrict Water Activity Enterprise in order for the pipeline, and thus the groundwater management plan, to stay operational. Revenue collected by the Trinchera Subdistrict Water Activity Enterprise from the Subdistrict would then be available for payment of the installments on the CWCB loan, as well as for operation and maintenance of the pipeline..

## **1.0 Introduction**

### **1.1 Purpose of the Trinchera Unconfined Augmentation Well Pipeline**

Members of the Subdistrict are landowners within the Trinchera Water Conservancy District who rely on groundwater for all or part of their commercial, irrigation, and or municipal uses within the area defined by the Rio Grande Decission Support System (RGDSS) Ground Water Model and the Rules Governing the Withdrawal of Groundwater in Water Division No. 3, Case No 15CW3024 as the Trinchera Response Area. See figure 1 below showing a map of the Subdistrict and Response Area. The RGDSS Groundwater Model has calculated stream depletions occuring to surface water caused by wells withdrawing water from the the confined and unconfined aquifer in the Trinchera Response Area. These depletions may cause injury to senior surface water rights and/or interfere with the state's ability to fuffill its obligations under the Rio Grande Compact. In order to remedy the injury or interference, the State Engineer has promulgated Ground Water Rules (Case No. 15CW3024, District Court in and for Water Division No. 3) that will have a direct impact on the future use of ground water within the Trinchera Response Area. Under the Groundwater Rules nonexempt wells can only continue groundwater withdrawals if they have either: an individual Plan for Augmentation, a Substitute Water Supply Plan, or their well is included in a Subdistrict's Groundwater Management Plan and Annual Replacement Plan. The Subdistrict's Annual Replacement Plan must demonstrate that the Subdistrict has a sufficient source of replacement water available to replace injurious stream depletions resulting from Subdistrict Well's groundwater withdrawals. The wells identified for delivery of unconfined augmentation water are 5.5 miles from the Rio Grande River. The Subdistrict, acting by and through the Trinchera Subdistrict Water Activity Enterprise, is seeking a \$976,800.56 loan from the CWCB Water Project Loan Program in order to fund construction of the Trinchera Unconfined Augmentation Well Pipeline. The Subdistrict will make payments to the Trinchera Subdistrict Water Activity Enterprise for use of the capacity of the Trinchera Unconfined Augmentation Well Pipeline for delivery of water owned or controlled by the Subdistrict to replace a portion of its injurious stream depletions occurring to the Rio Grande River and to the Conejos River through exchange. Within the Trinchera Subdistrict there are 129 unconfined wells that could be the source of consumptive use reduction in a substitute water supply plan, a change case, and/or an alternative transfer method to obtain augmentation water to be delivered by the Trinchera Subdistrict Water Activity Enterprise through the Trinchera Unconfined Augmentation Well Pipeline for replacement of depletions. The Trinchera Subdistrict, using its allocation to reduce consumptive use to meet sustainability requirements and in cooperation with it members will obtain consumptive use reduction from the unconfined aquifer that will offset the pumping of augmentation wells. In addition to

the “dry-up” of unconfined wells, the Subdistrict could purchase surface water stored in Smith Reservoir from the Trinchera Irrigation Company and either through a substitute water supply plan, a change case, and/or an alternative transfer method change the water to recharge/augmentation. This surface water would then be recharged to the unconfined aquifer, as an augmentation source to offset the pumping of the unconfined augmentation wells. Funding for and the construction of the Trinchera Unconfined Augmentation Well Pipeline will allow the Subdistrict Members to continue operating their Subdistrict Wells.

**Figure 1 Subdistrict and Response Function Boundries**

## **1.2 Project Sponsor – Trinchera Groundwater Management Subdistrict of the Trinchera Water Conservancy District, acting by and through its Water Activity Enterprise**

The Trinchera Subdistrict was decreed organized on September 3, 2008 by the District Court for Costilla County in Case No. 2007CV66. The District Court for Water Division No. 3 (“Water Court”) has confirmed the ability of the Trinchera Subdistrict, as a subdistrict of a water conservancy district, to pursue a Ground Water Management Plan. The Water Court previously entered an order confirming the Subdistrict’s ability, as a subdistrict of a water conservancy district, to submit a plan of water management. See ORDER GRANTING TRINCHERA SUBDISTRICT’S MOTION FOR DETERMINATION OF QUESTION OF LAW REGARDING AUTHORITY TO IMPLEMENT A GROUNDWATER MANAGEMENT PLAN dated October 7, 2016 in Case No. 2015CW3024. In February of 2017 the Subdistrict established a water activity enterprise pursuant to C.R.S. § 37-45.1-101, et seq., to be known as the *Trinchera Groundwater Management Subdistrict Water Activity Enterprise* (the “Trinchera Subdistrict Water Activity Enterprise”). A copy of the resolution of the Subdistrict Board establishing the Trinchera Enterprise is attached.

The overall objective of the Subdistrict is to provide a water management alternative to individual plans for augmentation or state-imposed regulations that limit the use of wells within the Subdistrict; that is a system of self-regulation using economic-based incentives and other measures that promote responsible groundwater use and management and ensures protection of senior surface water rights. The Subdistrict currently consists of 174 wells that have consumed an average of 24,888 acre-ft. from 2011 through 2020. In an effort to maintain a sustainable aquifer and to meet the requirement for replacement of stream depletions the Subdistrict Board set the allocation to 16,500 acre-ft. With 13,036 acre-ft. for irrigation, 464 acre-ft. for commercial and municipal uses and 3,000 for augmentation as a replacement source for stream depletions.

In 2011, pursuant to Ballot Issue 5A, the Trinchera Subdistrict received voter approval to collect, retain and expend all revenues and funds, from any source, during 2011 and subsequent years, notwithstanding the limitations of ARTICLE X, SECTION 20 of the COLORADO CONSTITUTION or any other law. In order to fund their operations, the Subdistrict assesses administrative and operational fees by special assessments pursuant to C.R.S. 37-45-125, or by contractual payment under C.R.S. § 37-45-131. The fees assessed by the Subdistrict are a per well administrative fee, a per acre-ft. past pumping fee (based on average historical CU of the well), a per acre-ft. current pumping fee (based on the allocation of current year CU to the well), and a per acre-ft. over pumping fee (a penalty fee at 10X the normal fee in the event and for the amount the allocation is exceeded). The past pumping and current pumping fees will be used by the Subdistrict to make payments for pipeline services to the Trinchera Subdistrict Water Activity Enterprise. The foregoing source of revenue to the Trinchera Subdistrict Water Activity Enterprise will be used to fund the repayment of the Trinchera Unconfined Pipeline

loan, as well as operational and maintenance costs of the pipeline system itself. The initial fees for 2020 and 2021 were set at \$25/acre-ft. For the 2022 season the fee is set at \$30.36/acre-ft.

### **1.3 Project Area**

The project area is located in the northern portion of Costilla County in the San Luis Valley. The economy in this area is predominately agriculturally based. Crops grown in the Trinchera Subdistrict include alfalfa, potatoes, grass hay, barley, wheat, oats, canola, and quinoa. Other economic sectors include ranching, forestry, and tourism. Trinchera Subdistrict is bordered on the north and east by the Sangre de Cristo Mountains, on the west by the Rio Grande River and on the south by the San Luis Hills. The snowmelt from the Sangre de Cristos provides the primary streamflow into the subdistrict from Trinchera, Ute, and Sangre de Cristo Creeks. The aquifer beneath the Subdistrict is primarily unconfined with only 19 confined wells located at the western edge of the Subdistrict along the Rio Grande River. Costilla County is the poorest county in Colorado.

### **1.4 Land Uses**

Land use is predominately irrigated agriculture, with a small amount of commercial and municipal uses. In Costilla County agricultural land is primarily used for forage production followed by potatoes and small grains. From 2011 to 2020 the average consumptive use by wells was 24,888 acre-ft. with 96% of the use going to center pivot irrigation, 2% to flood irrigation, and 2% to commercial and municipal uses.

## **2.0 Water Demands and Water Rights Included in the Trinchera Unconfined Pipeline**

### **2.1 Water Supply Demands**

The water supply demands are determined by the Rio Grande Decision Support System (RGDSS) Groundwater Model and the Trinchera Response Are Response Functions. These tools are used to calculate the Subdistrict's depletions to the Rio Grande River, Conejos River, and Trinchera Creek on a monthly basis and are summed on to an annual basis. The largest portion of depletions owed by the Subdistrict is to the Rio Grande River from the Chicago Ditch to the State Line (Rio Grande Reach 3) with an average of 2,971 acre-ft. from 2011 to 2020. The next largest stream depletion from Subdistrict pumping is on the Conejos River below Seldonia/Garcia Ditch (Conejos Reach 2) at 391 acre-ft. The remaining depletions occur on the Rio Grande between the Excelsior Ditch and Chicago Ditch (Rio Grande Reach 2) at 169 acre-ft. and on the Trinchera Creek below Smith Reservoir (Trinchera Reach 2) at 160 acre-ft. The maximum depletions to the Rio Grande and Conejos Rivers during this time period were 3,887 acre-ft.

**Table 1 Net Stream Depletions of Trinchera Subdistrict**

Year	Net Stream Depletions (May-Apr)				Total
	Trinchera Below Smith Reservoir	Rio Grande Excelsior-Chicago	Rio Grande Chicago-State Line	Conejos below Seledonia/Garcia	
2011	9	149	2,732	362	<b>3,252</b>
2012	9	152	2,644	359	<b>3,164</b>

Average	160	169	2,971	391	3,691

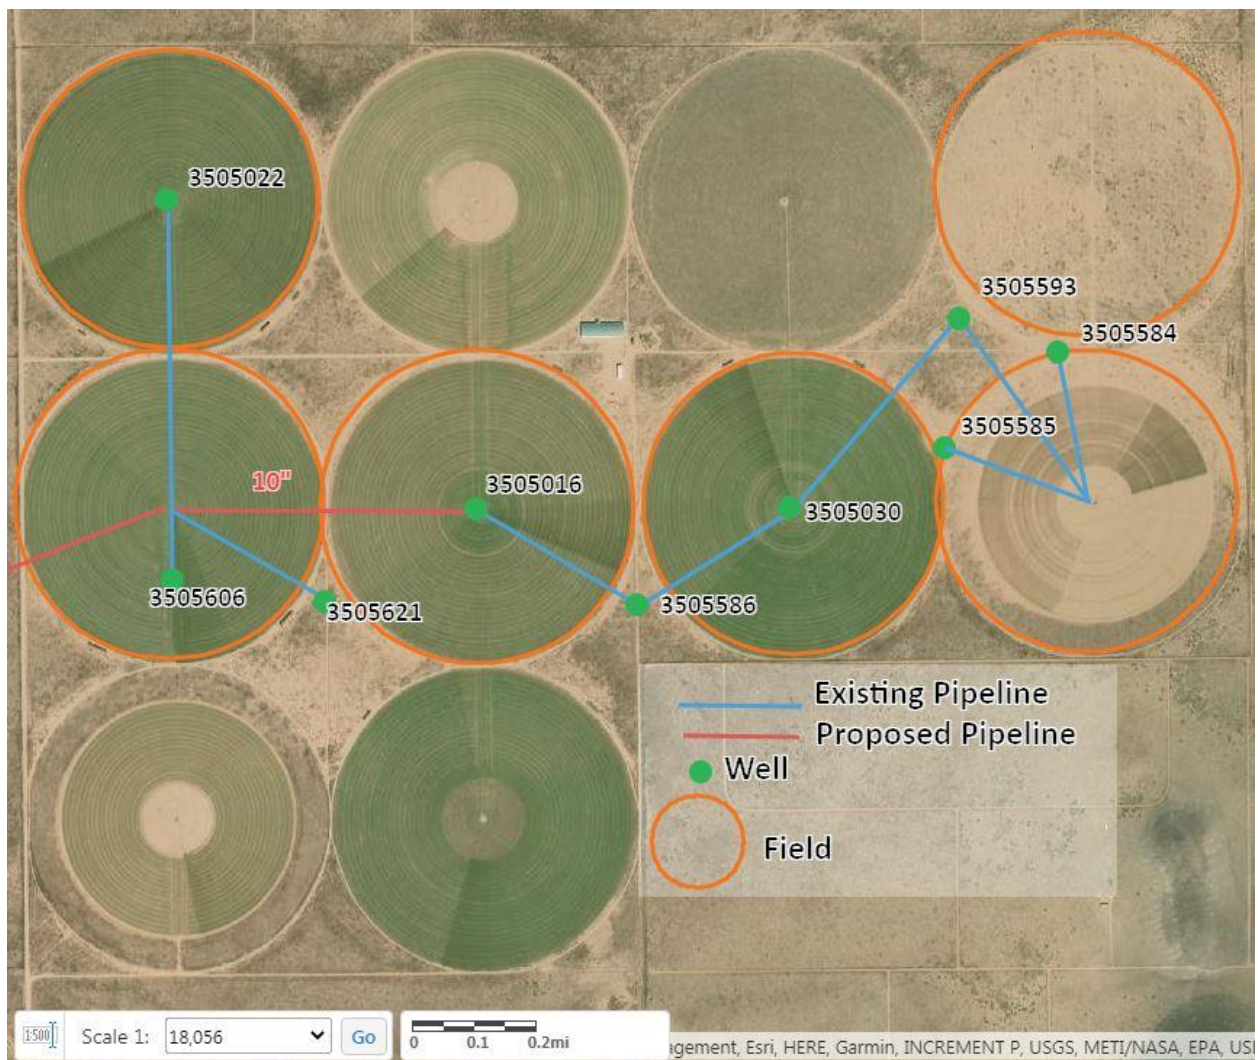

## 2.2 Water Rights Included in the Trinchera Unconfined Augmentation Well Pipeline

The primary source of water for conveyance through the Trinchera Subdistrict Water Activity Enterprise's unconfined well augmentation pipeline will be the 129 unconfined wells in the basin that have historical consumptive use that can be changed from irrigation to augmentation. In order to address sustainability requirements and to provide for replacement water, it is anticipated that Subdistrict will be required to set the allocation of groundwater consumptive use such that de-facto dry up will occur in the Subdistrict. That dry-up can offset the augmentation water required to replace depletions on the Rio Grande and Conejos Rivers in conjunction with other sources the Subdistrict has acquired such as forbearance. The Subdistrict will then work cooperatively with its members to identify where the dry up will occur on an annual basis and initially using a substitute water supply plan will change the historic consumptive use to augmentation for replacement of depletions. The total historic consumptive use associated with these wells is 20,888 acre-ft. A list of WDID of the wells and the historic consumptive use associated with each will is included in Attachment 1.

The physical source of water will be nine wells connected in a manifold system. The wells included are listed in Table 2 and locations are shown in Figure 2.

**Table 2 Physical Source of Water**

### **3.0 Project Description**

#### **3.1 Purpose and Background of the Trinchera Unconfined Pipeline**

The groundwater wells within the Trinchera Subdistrict are required to replace injurious depletions to the Rio Grande River, Conejos River, and Trinchera Creek. The depletions to Trinchera Creek have been addressed through the use of forbearance and no call agreements with the surface water right holders on Trinchera Creek. The Trinchera Subdistrict continues to look for reliable sources of replacement water to replace the 3,531 acre-ft. average depletions occurring on the Rio Grande and Conejos Rivers. The following alternatives described below have been considered to remedy depletions on the Rio Grande and Conejos Rivers.

#### **3.2 Analysis of Alternatives**

##### **3.2.1 Alternative 1 – Purchase Surface Water Rights and/or Forbearance Agreements**

Surface water rights could be purchased, and the irrigated land could be dried up. The historical consumptive use would be changed to augmentation through water court. The Subdistrict has not found surface water rights for sale with enough historical consumptive use to fully replace the depletions to the Rio Grande and Conejos Rivers. Also surface water rights are dependent on stream flows and as such the amount of water available fluctuates from year to year placing some uncertainty as to how much water will be available in a given year relative to the depletions that need to be replaced. Also the timing of the water right coming into priority may not match the timing of depletions to the streams. To address the fluctuation of supply and timing storage must also be procured. The Subdistrict will continue to evaluate surface water rights as they become available as to the suitability for replacement of Subdistrict depletions, but to date the amount of consumptive use available are not sufficient to replace depletions.

Forbearance Agreements are contracts to pay the surface water right holder for the injury occurred from depletions with something other than wet water. The Subdistrict needed 704 acre-ft. of forbearance for the 2021 ARP as it had no other sources of water. Forbearance can be an unreliable source as it also is controlled by streamflow and the resulting calling right. If the calling right is not a ditch forbearing with the Subdistrict, it is not available as a replacement source on that day and wet water is required. Also, forbearance agreements have risen in price as there is more demand for water. One forbearance agreement offered to the Subdistrict this year set the price at \$500/acre-ft. As the price of forbearance increases it will become unaffordable for the Subdistrict to maintain. Many of the contracts for forbearance are on an annual basis which makes them difficult to count on in the long term.

### 3.2.2 Alternative 2 – Trinchera Unconfined Augmentation Pipeline

The second alternative considered is the use of unconfined augmentation wells which will pump water to the Rio Grande through a pipeline. Dry up of unconfined wells in the basin as a result of the imposition of allocation limitations will be a source of historical consumptive use for the augmentation wells. A second source for the consumptive use for the unconfined augmentation wells would be the changing of Trinchera Irrigation Company surface water historical consumptive use of water stored in Smith Reservoir to recharge/augmentation. This surface water would then be recharged into the unconfined aquifer and pumped from the unconfined augmentation wells for replacement of depletions. The delivery pipeline will cover 5.5 miles between the selected wells and the Rio Grande River. A 10" pipeline one half mile long will be required to complete the manifold tying the supply wells together. The proposed pipeline is shown in Figure 3 below.

**Figure 3 Proposed Trinchera Unconfined Augmentation Pipeline**

### 3.2.3 Alternative 3 – No Action

No action would result in an unreliable supply of replacement water that would result in eight commercial wells, three municipal wells and 163 irrigation wells will being forced to cease pumping, when sources of replacement water available are insufficient to replace depletions. The economic impact would be devastating to the area, so this is not the preferred alternative.

### **3.3 Preferred Alternative – Alternative 2**

The Subdistrict has not been able to find sufficient surface water available for sale and as forbearance is not a reliable source based on streamflow and contracts available from year to year and also may become price prohibitive to make Alternative 1 work, Alternative 2 is the preferred alternative. Augmentation wells pumping water to the Rio Grande will provide a guaranteed source to the Rio Grande and Conejos to ensure the Sub-district can replace injurious depletions in time, place, and amount, as required by the Ground Water Rules. By using unconfined aquifer wells the source of dry up to offset the pumping can be borne by all the members of the Subdistrict and not just the owners of the few confined wells. By using unconfined wells to supply the augmentation water there is sufficient dry up available through the Subdistrict's allocation process to full supply all depletions on the Rio Grande and Conejos Rivers if needed. The use of unconfined aquifer wells also provides a conduit for the use of surface water through recharge as a source of augmentation water the streams.

## **4.0 Engineering Analysis for the Preferred Alternative**

### **4.1 Source of Water for the Trinchera Unconfined Pipeline**

The physical source of water for the Trinchera Unconfined Pipeline will come from nine irrigation wells that historically irrigated 780 acres under center pivot sprinklers. These wells pull ground water from the unconfined aquifer. The acreage for these wells will be dried up and along with the historical consumptive use of other unconfined wells in the basin and surface water recharged will be used to remedy depletions from the Subdistrict wells. The unconfined wells in the basin have historically irrigated alfalfa, grass hay, small grains, and potatoes in the basin. The dry up from the parcels associated with the physical supply wells are expected to have 883 acre-ft. of consumptive use available for replacement of depletions. These parcels along with other parcels supplied by the unconfined aquifer will be used along with other sources to supply the replacement of depletions on the Rio Grande River and through exchange on the Conejos River, which has been as much as approximately 3900 acre-ft.

### **4.2 Hydrologic Evaluation**

The physical supply wells are drilled to depths between 98 feet and 320 feet and are in the unconfined aquifer. See Table 3 for well depths. The current cumulative flow rate of the wells is 2009 gpm.

**Table 3 Well Depths and Perforations**

WDID	Top Perforation	Bottom Perforation	Well Depth
	ft	ft	ft
3505022	251	305	305
3505621	121	200	200
3505606	60	200	200
3505016	116	170	170
3505030	180	320	320
3505586	50	151	151
3505584	56	96	98
3505585	46	126	126
3505593	20	156	156

**5.0 Project Cost**

The estimated cost for the Trinchera Unconfined Pipeline project is \$750,000. The detailed construction cost for the project is shown in Table 4

**Table 4 Trinchera Unconfined Augmentation Well Pipeline Cost Estimate**

Item	Quantity	Total Cost
PIP 15" 80 psi	29,040 ft	\$606,355.20
Labor: Trench, install, backfill 40" of cover over pipe	29,040 ft	\$138,230.40
PIP 10" 80 psi	2700 ft	\$37,033.20
Labor: Trench, install, backfill 40" of cover over pipe	2700 ft	\$12,528.00
	Total Construction Cost (TCC)	\$794,146.80
	Legal and Engineering Cost @ 3% TCC	\$23,824.40
	Contingency @20% TCC	\$158,829.36
	Total Project Cost	\$976,800.56

## **6.0 Permitting, Change of Water Rights**

The physical supply wells for this plan are permitted through the Division of Water Resources as described above. In addition to the physical supply wells, additional unconfined wells in the basin will be used in obtaining dry up to provide historical consumptive use to be changed to augmentation for the replacement of depletions. A list of WDIDs, permits, and decrees are included in Attachment 2.

The Subdistrict's plan is to temporarily change the water rights use from irrigation to augmentation through the SWSP process for up to 5 years. After this time, the Subdistrict will either pursue an Alternative Transfer Method (ATM) or a change in water rights through a water court case.

## **7.0 Implementation Schedule**

The Subdistrict will begin replacing depletions for the 2022 ARP on May 1<sup>st</sup> 2022. The project will need to be completed by that date. It is anticipated bid documents will be prepared by November 2021. The bid would occur immediately after that with a contract selected December of 2021. The contractor will be selected not only on cost but also on availability and schedule to complete the project. The projected start time would be March 2022.

## **8.0 Institutional Considerations**

To construct the pipeline a County easement-approval will be required to install the pipeline crossing one county road.

An agreement between the Trinchera Subdistrict Water Activity Enterprise and the Owner has not been finalized. The owner has indicated that he is willing to work with the Subdistrict and the Trinchera Subdistrict Water Activity Enterprise. The agreement would be for the use of the wells and existing infrastructure along with a right of way through the owner's property for the construction of the proposed pipeline. The owner of the property owns all the land on the proposed path from the wells to the Rio Grande River. The Owner would also dry up the parcels served by the wells for the pipeline.

The Subdistrict on an annual basis will set its allocation to maintain a sustainable aquifer and to provide enough "dry up" to allow for the use of the augmentation wells to have adequate supply to replace depletions on the Rio Grande and Conejos Rivers. The subdistrict members (including the owner of the physical supply wells for the pipeline) in response to this allocation will designate their dry up on an annual basis to provide historical consumptive use for a change to augmentation.

## **9.0 Social and Environmental Impacts of the Project**

The environmental impacts of installing the pipeline itself are very minimal. If the Subdistrict does not find a way to replace injurious depletions and the project does not move forward, then environmental impact might be very significant if wells are turned off. Significant portions of historically irrigated land will be dried up.

The social impact for majority of the area including the Subdistrict members will be positive. It will allow irrigation wells to continue to withdraw groundwater while also replacing any injurious depletions owed to senior surface water rights from these continued groundwater withdrawals. All the surface water rights in the Trinchera Subdistrict are owned by well owners who are members of the Subdistrict.

## **10.0 Financial Feasibility**

### **10.1 Financial Repayment**

The Trinchera Subdistrict acting by and through its Water Activity Enterprise is applying for a loan in the amount of \$976,800.56 from the Colorado Water Conservation Board Water Project Loan Program with a 30-year repayment period and an interest rate of 1.1%. The estimated annual payment is \$38,404.52. Consistent with C.R.S. § 37-45.1-102(2), 105(3), and 106, the Subdistrict may make payments to the Trinchera Subdistrict Water Activity Enterprise in return for provision of capacity in the pipeline to the Subdistrict and the payment of funds by the Subdistrict to the Trinchera Subdistrict Water Activity Enterprise for such services. This will constitute the a reliable and consistent source of funds, however, in order to avoid violation of TABOR, that agreement will not constitute a general obligation of the District or Subdistrict, and must not require the Subdistrict to accept and pay the Trinchera Subdistrict Water Activity Enterprise for such capacity without regard to annual appropriation by the Subdistrict (in short, the obligation to make payment to the enterprise must be subject to annual appropriation by the Subdistrict). Trinchera Subdistrict Water Activity Enterprise will pledge all revenues received from the Subdistrict for repayment of the loan. The Subdistrict assesses a current pumping fee and a past pumping fee at a variable fee rate. The current pumping fee is 83% of the irrigation allocation multiplied by the variable fee rate for the subdistrict. The past pumping fee is the historic consumptive use by the wells multiplied by 17% multiplied by the variable rate. For the 2021 the irrigation allocation accepted was 12,658.33 acre-ft with the historic consumptive use at 23,654.87 acre-ft. To generate the \$38404.52 the variable fee rate required is \$2.64/acre-ft. The variable rate for 2022 is set at \$30.36/acre-ft with projected income for 2022 and will generate \$388,268.85. This variable fee rate is set annual by the board of directors to meet the financial obligations of the Subdistrict. In addition to the irrigators in the basin the municipalities and commercial users contract with the subdistrict and their contracts will generate an additional \$19,162.89 in 2022. A Schedule of Revenues and Expenditure is included as Attachment 3.

## **10.2 Credit Worthiness**

In order to fund the loan obligations and operations and maintenance, the Trinchera Subdistrict Water Activity Enterprise will bill the Subdistrict an amount equal to the annual payment, approximately \$38,405.00 annually.

The service fee charged by the Trinchera Subdistrict Water Activity Enterprise for the Subdistrict's use of the pipeline will be evaluated annually, and if appropriate, will be adjusted upward by the Board of Directors of the Subdistrict, as the governing body of the Trinchera Subdistrict Water Activity Enterprise, as necessary to meet the debt and operational requirements of the Trinchera Subdistrict Water Activity Enterprise.

## **10.3 TABOR Considerations.**

The District and the Subdistrict are "districts" subject to the requirements of Colo. Const., Art. X, § 20 ("TABOR"). TABOR defines "district" as "the state or any local government, excluding enterprises." Colo. Const., Art. X, § 20(2)(b). In 2011, pursuant to Ballot Issue 5A, the Trinchera District and the Subdistrict received voter approval to collect, retain and expend all revenues and funds, from any source, during 2011 and subsequent years, notwithstanding the limitations of ARTICLE X, SECTION 20 of the COLORADO CONSTITUTION or any other law. One of the additional limitations of TABOR, however, is that prior voter approval must be obtained by a district for the creation of any multiple-fiscal-year debt or financial obligation unless adequate cash reserves are available and pledged irrevocably to make all future payments. Colo. Const., Art. X, § 20(4)(b). This means that the District and the Subdistrict are precluded from incurring the multi-year financial obligations incumbent to a loan from the Colorado Water Conservation Board ("CWCB") in the absence of prior voter approval.

TABOR, however, contains an exclusion under what is called the "enterprise" exception, which provides that an "enterprise" is a government-owned business authorized to issue its own revenue bonds and receiving under 10% of annual grants from all Colorado state and local governments combined. Colo. Const., Art. X, § 20(2)(d). TABOR does not define the operative terms "government-owned business" and "grant." See *id.*

To address the ambiguity, and to allow water planning activities to move forward, including multi-year fiscal obligations, the Colorado General Assembly enacted specific statutory provisions, now set forth at C.R.S. § 37-45.1-101, et seq., for "Water Activity Enterprises." Under these provisions, the governing body of a water conservancy district may establish and act as the governing body of one or more water activity enterprises under the TABOR exclusion. C.R.S. § 37-45.1-103. The statute expressly grants the authority to issue and reissue revenue bonds, as required for the TABOR exception. C.R.S. § 37-45.1-104. A "water activity" includes, separately, or in combination, any and all aspects of water rights acquisition, water supply project development, diversion, storage, carriage, and delivery of water. See C.R.S. § 37-45.1-102(3). A "grant" is defined by the statute as "cash payment of public funds"

made directly to a water activity enterprise by a state or local government entity or district which is not required to be repaid. C.R.S. § 37-45.1-102(2). However, the statute goes on to describe a number of exceptions to the term “grant”, which exceptions include payments by the state or a local government for an agreement to provide services, including the capacity of project works, and loans that are the subject of repayment. *Id.* and C.R.S. § 37-45.1-105(3). Further it is specifically contemplated that an “enterprise” may enter into loans with the CWCB, and that such loans are not violations of TABOR so long as the enterprise status is maintained by limiting “grants” to the enterprise to 10 percent or less of the annual revenue. Court’s reviewing the matter have determined that the obligations and debt of the “water activity enterprise” are distinct from and are not considered to be multi-year fiscal obligations of the parent District if the required formalities are observed. See *In re: Ravenna Metropolitan Dist.* 522 B.R. 656, 670-676 (2014).

In sum, in the conduct of a “water activity enterprise” the District and the Subdistrict may enter into multi-year financial obligations, and expend water revenues, fees, and other user based charges in the pursuit of a water activity enterprise without limitation by TABOR.

In February of 2017 the Subdistrict established the Trinchera Subdistrict Water Activity Enterprise pursuant to C.R.S. § 37-45.1-101, et seq. The proposal is for the CWCB loan to be made directly to the Trinchera Enterprise, and not to either the District or the Subdistrict. The Trinchera Enterprise will use the loan proceeds to construct the pipeline to delivery replacement water to the Rio Grande River. Per TABOR and the provisions of C.R.S. § 37-45.1-102(2), 105(3), and 106, the loan from CWCB, which must be repaid, is not a “grant” under TABOR.

As far as the flow of funds for repayment of the CWCB loan, the Subdistrict has entered into Class D Allotment contracts with the irrigation groundwater users pursuant to C.R.S. § 37-45-125 and with the municipal and commercial groundwater users pursuant to C.R.S. § 37-45-131 under which they are required to make payments to the Subdistrict for the allocation of water that may be pumped and consumed under the Subdistrict’s groundwater management plan, and its implementing annual replacement plans. Because of the prior DeBruecing by way of Ballot Issue 5A, such revenues are not subject to the revenue and spending limits of TABOR. Operation of the proposed pipeline by the Trinchera Subdistrict acting by and through its Water Activity Enterprise is a critical component of the Subdistrict’s groundwater management plan and obtaining State Engineer approval of the annual replacement plans. Absent such annual approval of the annual replacement plan, none of the groundwater wells in the Subdistrict may operate. Consistent with C.R.S. § 37-45.1-102(2), 105(3), and 106, the Subdistrict may make payments of public funds to the Trinchera Subdistrict Water Activity Enterprise in return for provision of capacity in the pipeline to the Subdistrict. The payment of such funds to the Trinchera Enterprise will not constitute “grants” in violation of the enterprise exception of TABOR. The source of funds from the Subdistrict would be the payments made by groundwater users to the Subdistrict pursuant to C.R.S. §§ 37-45-125 and 131. The agreement between the CWCB and the Trinchera Subdistrict Water Activity Enterprise, however, must not and will not constitute a general obligation of the District or Subdistrict. Regardless, the Subdistrict and its

constituents have a significant incentive to make the payments to the Trinchera Subdistrict Water Activity Enterprise in order for the pipeline, and thus the groundwater management plan, to stay operational. The revenue collected by the Trinchera Subdistrict Water Activity Enterprise from the Subdistrict would then be pledged for payment of the installments on the CWCB loan.

### **11.0 Conclusions and Recommendations**

1. The construction and operation of the Trinchera unconfined augmentation pipeline by the Trinchera Subdistrict acting by and through the Water Activity Enterprise will assist the Trinchera Subdistrict in remedying injurious depletions owed to senior surface water users on the Rio Grande River and Conejos Rivers from groundwater withdrawals in the Subdistrict. The change of water right for the augmentation wells will result in a total of between 880 ac-ft up to 3,240 ac-ft based on the historical consumptive use of the irrigated areas.
2. The Trinchera unconfined augmentation pipeline is feasible from both a financial and engineering viewpoint.
3. The Trinchera Subdistrict acting by and through the Water Activity Enterprise, has the legal ability to budget the annual payment for the loan .

**RESOLUTION OF THE BOARD OF DIRECTORS OF  
THE GROUNDWATER MANAGEMENT SUBDISTRICT OF  
THE TRINCHERA WATER CONSERVANCY DISTRICT  
ESTABLISHING A SUBDISTRICT WATER ACTIVITY ENTERPRISE**

WHEREAS, The Groundwater Management Subdistrict of the Trinchera Water Conservancy District (the "Subdistrict") is a quasi-municipal corporation and political subdivision of the State of Colorado organized and existing as a subdistrict of a water conservancy district pursuant to § 37-45-101, *et. seq.* C.R.S., and is authorized and empowered thereby to furnish water to lands within its boundaries; and

WHEREAS, The Subdistrict was formed pursuant to § 37-45-120, C.R.S. and therefore pursuant to § 37-92-501(4)(c), C.R.S., is authorized under Colorado law to develop, submit for approval and, if approved, implement a groundwater management plan in Water Division 3, consistent with the Rules Governing the Withdrawal of Groundwater in Water Division 3 (the Rio Grande Basin) and Establishing Criteria for the Beginning and End of the Irrigation Season in Water Division 3 for all Irrigation Water Rights (the "Rules"); and

WHEREAS, The Subdistrict intends to implement a groundwater management plan that meets the requirements of §§ 37-92-501(4)(a) and (b), C.R.S., and the applicable provisions of the Rules (the "Groundwater Management Plan"); and

WHEREAS, The Subdistrict has determined that it will be necessary to acquire water, water rights, property, easements, agreements and facilities, including but not limited to storage structures, canals or pipelines, augmentation and recharge structures, monitoring wells, augmentation wells, and to enter into forbearance, fallowing or other agreements in order to implement the Groundwater Management Plan, which will require replacement of injurious groundwater depletions caused by pumping of member wells included within the Groundwater Management Plan, including any ongoing or delayed depletions attributable to member wells should the Subdistrict or its Groundwater Management Plan cease to exist or operate, and that the Subdistrict meet sustainability requirements of the Groundwater Management Plan and the Rules with respect to the aquifer(s) within the Subdistrict; and

WHEREAS, It is the desire of the Subdistrict to establish a subdistrict water activity enterprise pursuant to § 37-45.1-101, *et. seq.*, C.R.S., in order to implement those operations which the Subdistrict determines should be operated as a water activity enterprise in support of and to facilitate the development and operation of the Groundwater Management Plan.

NOW, THEREFORE, BE IT RESOLVED, by the Board of Directors of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District:

1. **Establishment.** There is hereby established, pursuant to the terms and provisions of the water activity enterprise statute, Title 37, Article 45.1, C.R.S., a subdistrict water activity enterprise to be known as the *Trinchera Groundwater Management Subdistrict Water Activity Enterprise* (hereinafter, the "Enterprise"), which is an instrumentality and wholly owned by the Subdistrict, which consists of the separate business entity that may be used by the Subdistrict for the purposes of developing, financing, and managing those assets, facilities and arrangements necessary for approval and operation of the Groundwater Management Plan, including but not limited to water projects or facilities and the acquisition of water; including the purchase and lease of water, water rights, municipal effluent and water projects, and the acquisition, construction, operation, maintenance, repair and replacement of water facilities (such water facilities include but are not limited to storage structures, canals or pipelines, augmentation and recharge structures, monitoring wells, and augmentation wells), the acquisition of land or easements associated with or necessary for water facilities, and the acquisition of forbearance, fallowing or other agreements in order to replace depletions attributable to wells and structures included within the Groundwater Management Plan, to the extent required by law, and to satisfy the sustainability requirements of the Rules and the Groundwater Management Plan. The assets of the Enterprise may include, without limitation, the following assets associated with and reasonably necessary to the achievement of said undertakings: water leases, water rights and interests of real and personal property and water facilities hereafter acquired, the revenue streams generated by Subdistrict Class B, C and/or D Assessments for reimbursement of or payment for Enterprise services, and fees collected directly from and/or fines imposed on owners of wells or structures operating pursuant to the Groundwater Management Plan. Further, the Subdistrict may grant to the Enterprise funds from the general mill levy of the Subdistrict, so long as not more than ten percent (10%) or more of the Enterprise's annual revenue is received as grants from all Colorado state and local governments combined. The Enterprise shall have

all the authority, powers, rights, immunities, obligations, and duties as may be provided or permitted by the Water Activity Enterprise statute, Article 45 of Title 37, C.R.S. for a water conservancy district, the Governmental Immunity Act, § 24-10-101, *et. seq.*, C.R.S., and the Colorado Constitution, and as may be further prescribed from time to time by resolution of the Board of Directors, including without limitation the ability to borrow and commit to the repayment of funds from a public or private entity. , Nothing in this resolution shall be deemed to limit the Subdistrict's right, power or authority, acting without the Enterprise, to engage in any undertakings with its own resources either in support of the Groundwater Management Plan or for any other lawful activity. There is also hereby established the Trinchera Groundwater Management Subdistrict Water Activity Enterprise Fund, for purposes of accounting for the revenues, expenditures, and obligations of the Enterprise.

2. **Governing Body.** The members of the Board of Directors of the Subdistrict shall act as the governing body of the Enterprise. The said governing body shall be subject to all applicable laws, bylaws, rules and regulations pertaining to the Subdistrict Board of Directors. It shall not be necessary for the governing body of the Enterprise to meet separately from regular and special meetings of the Subdistrict's Board of Directors. However, when acting on behalf of the Enterprise, the governing body shall specifically announce or acknowledge the actions thereby taken by the governing body of the Enterprise and its actions as the governing body of the Enterprise shall be those of the Subdistrict acting through the Enterprise. The governing body may conduct its affairs in the same manner and subject to the same laws which apply to the Subdistrict's Board of Directors for the same or similar matters. Except as specifically stated in or for any particular act or determination, the act or determination of the Subdistrict's Board of Directors shall not be deemed to be the act or determination of the governing body of the Enterprise.

3. **Obligations.** Pursuant to § 37-45.1-104, C.R.S., the Enterprise may issue or reissue revenue bonds, notes, or other obligations payable from the revenues derived or to be derived from the function, service, benefits, or facility or the combined functions, services, benefits, or facilities of the Enterprise or from any other available funds of the Enterprise.

4. **Maintenance of Enterprise Status.** The Enterprise shall at all times and in all ways conduct its affairs so as to continue to qualify as a water activity enterprise within the meaning of § 37-45.1-102, C.R.S. and as an enterprise within the meaning of Article X, Section 20 of the Colorado Constitution. Specifically, but not by way of limitation, the enterprise is not authorized to, and shall not, impose taxes of any kind or receive ten percent (10%) or more of its annual revenue in grants from all Colorado state and local governments combined. "Grant" shall be defined as set forth at C.R.S. § 37-45.1-102(2). All the costs, liabilities, accounting, assessments, obligations and indebtedness of the Enterprise shall be kept and maintained as separately identifiable matters from Subdistrict funds and obligations.

Dated this 2<sup>nd</sup> day of March, 2017

Monty Smith, President of the  
Groundwater Management Subdistrict of  
the Trinchera Water Conservancy District

Certificate

Byron Kunugi, Secretary/Treasurer of the  
Groundwater Management Subdistrict of  
the Trinchera Water Conservancy District

all the authority, powers, rights, immunities, obligations, and duties as may be provided or permitted by the Water Activity Enterprise statute, Article 45 of Title 37, C.R.S. for a water conservancy district, the Governmental Immunity Act, § 24-10-101, *et. seq.*, C.R.S., and the Colorado Constitution, and as may be further prescribed from time to time by resolution of the Board of Directors, including without limitation the ability to borrow and commit to the repayment of funds from a public or private entity. , Nothing in this resolution shall be deemed to limit the Subdistrict's right, power or authority, acting without the Enterprise, to engage in any undertakings with its own resources either in support of the Groundwater Management Plan or for any other lawful activity. There is also hereby established the Trinchera Groundwater Management Subdistrict Water Activity Enterprise Fund, for purposes of accounting for the revenues, expenditures, and obligations of the Enterprise.

2. **Governing Body.** The members of the Board of Directors of the Subdistrict shall act as the governing body of the Enterprise. The said governing body shall be subject to all applicable laws, bylaws, rules and regulations pertaining to the Subdistrict Board of Directors. It shall not be necessary for the governing body of the Enterprise to meet separately from regular and special meetings of the Subdistrict's Board of Directors. However, when acting on behalf of the Enterprise, the governing body shall specifically announce or acknowledge the actions thereby taken by the governing body of the Enterprise and its actions as the governing body of the Enterprise shall be those of the Subdistrict acting through the Enterprise. The governing body may conduct its affairs in the same manner and subject to the same laws which apply to the Subdistrict's Board of Directors for the same or similar matters. Except as specifically stated in or for any particular act or determination, the act or determination of the Subdistrict's Board of Directors shall not be deemed to be the act or determination of the governing body of the Enterprise.

3. **Obligations.** Pursuant to § 37-45.1-104, C.R.S., the Enterprise may issue or reissue revenue bonds, notes, or other obligations payable from the revenues derived or to be derived from the function, service, benefits, or facility or the combined functions, services, benefits, or facilities of the Enterprise or from any other available funds of the Enterprise.

4. **Maintenance of Enterprise Status.** The Enterprise shall at all times and in all ways conduct its affairs so as to continue to qualify as a water activity enterprise within the meaning of § 37-45.1-102, C.R.S. and as an enterprise within the meaning of Article X, Section 20 of the Colorado Constitution. Specifically, but not by way of limitation, the enterprise is not authorized to, and shall not, impose taxes of any kind or receive ten percent (10%) or more of its annual revenue in grants from all Colorado state and local governments combined. "Grant" shall be defined as set forth at C.R.S. § 37-45.1-102(2). All the costs, liabilities, accounting, assessments, obligations and indebtedness of the Enterprise shall be kept and maintained as separately identifiable matters from Subdistrict funds and obligations.

## GROUNDWATER MANAGEMENT PLAN

The Board of Directors of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District (“Trinchera Subdistrict” or “Subdistrict”), submits the following Groundwater Management Plan, a/k/a Plan of Water Management (“GMP”). This GMP is consistent with a Groundwater Management Plan as defined in and meets the requirements laid out in the Rules Governing the Withdrawal of Groundwater in Water Division No. 3 (The Rio Grande Basin) and Establishing Criteria for the Beginning and End of the Irrigation Season in Water Division No. 3 for All Irrigation Water Rights (approved in Case No. 15CW3024, District Court, in and for Water Division No. 3) (the “Groundwater Rules”).

### 1.0 DEFINITIONS

1.1 “Administrative Fee” means a fee assessed by the Board of Directors on a per well WDID basis and used to fund the administrative portion of the Plan Costs, including services provided by the Rio Grande Water Conservation District and other services, the engineering and legal costs associated with developing the GMP and obtaining DWR approval, and costs of resolving any associated appeals to the courts, the costs of obtaining approval of ARPs, the costs of operating the GMP and ARPs, and the costs of changing any water rights or obtaining rights of exchange, if necessary. The Administrative Fee will be a flat fee that is charged per well. This fee may vary from year to year.

1.2 “Annual Replacement Plan” or “ARP” has the same meaning as that defined by the Groundwater Rules.

1.3 “Aquifer” means the Unconfined Aquifer that underlies the Trinchera Subdistrict and the Trinchera Response Area defined in the Groundwater Rules.

1.4 “ARP Year” means May 1st of the then current year through April 30th of the subsequent year.

1.5 “Board of Directors” means the Board of Directors of the Trinchera Subdistrict.

1.6 “Calendar Year” means January 1st through December 31st of each year.

1.7 “Class A assessment” means the tax that may be imposed by the Subdistrict under C.R. S. § 37-45-122.

1.8 “Class B assessment” means the special assessment that may be assessed to petitioning municipalities by the Subdistrict under C.R. S. § 37-45-123.

1.9 “Class C assessment” means the special assessment that may be assessed to petitioning public corporations, other than municipalities, by the Subdistrict under C.R. S. § 37-45-124.

1.10 “Class D assessment” means the special assessment that may be assessed to petitioning owners of land by the Subdistrict under C.R. S. § 37-45-125.

1.11 “Contract Well” means a well that is included via a formal agreement between the Subdistrict and the well owner pursuant to C.R. S. § 37-45-131 to include within the GMP and its ARPs as a groundwater well that diverts from the Aquifer as a Subdistrict Well.

1.12 “Current Pumping Fee” means a fee assessed by the Board of Directors to a Farm Unit, sufficient to cover the Plan Costs not covered by the Administrative Fee, including the costs of replacement supplies to cover stream depletions, and other costs associated with pumping and depletions during the current ARP year, including but not limited to payments under agreements to remedy stream depletions other than by providing replacement water, and costs required to achieve and maintain a Sustainable Water Supply. The Current Pumping Fee will be assessed based upon ground water consumptive use allotments and may vary from year to year.

1.13 “DWR” means the Colorado Division of Water Resources.

1.14 “Farm Unit” refers to all lands under the control and management of an Owner or Operator. A Farm Unit may include lands and Subdistrict Wells owned by multiple landowners.

1.15 “Farm Unit Allocation” means the total net groundwater consumptive use from the Aquifer allocated by the Board of Directors to Subdistrict Wells within a Farm Unit for an ARP Year.

1.16 “Ground Water Management Plan” or “GMP” has the same meaning as defined by the Groundwater Rules.

1.17 “Groundwater Rules” means the rules promulgated by the State Engineer titled Rules Governing the Withdrawal of Groundwater in Water Division No. 3 (the Rio Grande Basin) and Establishing Criteria for the Beginning and End of the Irrigation Season in Water Division No. 3 for all Irrigation Water Rights (approved in Case No. 15CW3024, District Court, in and for Water Division No. 3 approved on and effective March 15, 2019) as currently promulgated or as they may exist in the future.

1.18 “Inactive Well” has the same meaning as that defined by the Measurement Rules.

1.19 “Injurious Stream Depletions” has the same meaning as defined by the Groundwater Rules.

1.20 “Measurement Rules” means the Rules Governing the Measurement of Ground Water Diversions located in Water Division No. 3, the Rio Grande Basin, adopted by the State Engineer and approved by the District Court, in and for Water Division No. 3, Case No. 2005CW12 (August 1, 2006).

1.21 “Natural Prairie” is Natural Prairie Colorado Farmland Holdings, LLC and its successors.

1.22 “Natural Prairie No Call Agreement” is the proposed agreement among Natural Prairie Colorado Farmland Holdings, LLC, the Trinchera Irrigation Company, the Groundwater Management Subdistrict of the Trinchera Water Conservancy District, Trinchera Property Management, Inc., Trinchera Ranch Holdings, LLC and Blanca Ranch Holdings, LLC (collectively “Blanca Trinchera”), and Smith and Wakasugi RLLLP, which is attached and included in this GMP or any subsequent version of such agreement that is accepted by all of the parties thereto. There may be other no call, forbearance or similar agreements with Natural Prairie or with other parties in lieu of replacing injurious depletions in the future. These will not entail an amendment to this GMP and will be presented in future ARPs.

1.23 “Net Groundwater Consumptive Use” has the same meaning as defined by the Groundwater Rules.

1.24 “Non-Benefitted Lands” are lands that contain wells that are not covered by this GMP, either originally or as added by subsequent ARPs. Non-Benefitted Lands include lands that contain wells that are covered by this GMP for a period, but subsequently are removed from such coverage. Non-Benefitted Lands that contain wells that are covered by this GMP for a period, but subsequently are removed from such coverage, remain subject to payment of the Past Pumping Fee and to a lien to assure replacement of depletions if the Subdistrict ceases to function.

1.25 “Non-Exempt Well” means a well that is subject to the Groundwater Rules.

1.26 “Other Wells” means wells within the Trinchera Response Area that are not Subdistrict Wells.

1.27 “Owner” or “Owners” mean individuals or entities that own lands that are served by Subdistrict Wells or that own Subdistrict Wells.

1.28 “Operator” refers to the individual or entity that controls the operation of a Farm Unit.

1.29 “Overall Groundwater Consumptive Use Allocation” refers to the total amount of net ground water consumptive use from the Aquifer that is allocated by the Board of Directors to all Subdistrict Wells in an ARP Year. 1.30 “Over-Pumping Fee” means a fee assessed by the Board of Directors to a Farm Unit based upon the ground water consumptive use in excess of the Farm Unit Allocation that was assigned to the Farm Unit.

1.30 “Past Pumping Fee” means a fee assessed by the Board of Directors to a Farm Unit to provide replacement water or other means to prevent injury from Post-Plan Injurious Stream Depletions. Revenues from the Past Pumping Fee will be assigned to a separate lagged depletions account.

1.31 “Plan Costs” are the costs incurred by the Subdistrict in implementing and administering the GMP and its ARPs, including services provided by the Rio Grande Water Conservation District and other services, the engineering and legal costs associated with developing the GMP and obtaining DWR approval, and costs of resolving any associated appeals to the courts, the costs of obtaining approval of ARPs, the costs of operating the GMP and ARPs, and the costs of changing any water rights or obtaining rights of exchange, if necessary, and all other costs associated with (1) replacing or remedying injurious stream depletions attributable to Subdistrict Wells under approved ARPs, which will likely include, but is not limited to, the costs of purchasing water rights, and paying for the exercise of forbearance agreements; and (2) actions necessary to address sustainability requirements of the GMP.

1.32 “Post-Plan Injurious Stream Depletions” means Injurious Stream Depletions caused by the withdrawal of groundwater by Subdistrict Wells and calculated by the appropriate Response Functions or by some other method approved by the State Engineer that occur after the end of the ARP Year in which the groundwater withdrawal took place and are also known as lagged depletions.

1.33 “Response Area” has the same meaning as that defined by the Groundwater Rules.

1.34 “Response Functions” has the same meaning as that defined by the Groundwater Rules.

1.35 “RGDSS” has the same meaning as that defined by the Groundwater Rules.

1.36 “RGDSS Groundwater Model” has the same meaning as that defined by the Groundwater Rules.

1.37 “Rules and Regulations” or “Rules”, unless referring to rules promulgated by the State Engineer, means rules and/or regulations duly adopted by the Subdistrict Board of Directors.

1.38 “Subdistrict Board” means the Board of Directors of the Trinchera Subdistrict.

1.39 “Subdistrict Land” means all irrigated lands that are within the exterior boundaries of the Trinchera Subdistrict, as set forth in the Decree entered on September 3, 2008 by the District Court for Costilla County in Case No. 2007CV66, and subsequent orders of the Court approving petitions and orders of the Subdistrict Board for inclusion of land within the Subdistrict.

1.40 “Subdistrict Wells” means wells that are included in this GMP and whose Owners or Operators have agreed to be bound by this GMP, and its approved ARPs, either pursuant to petitions to the Subdistrict pursuant to C.R.S. §§ 37-45-123 through 125, or by contract pursuant to C.R.S. §§ 37-45-131.

1.41 “Sustainable Trinchera Water Supply” means a condition in which groundwater withdrawals and consumption are managed in accordance with the water levels within the Unconfined Aquifer underlying the Trinchera Response Area, the GMP and applicable ARPs.

1.42 “Trinchera Response Area” means the areal extent of the response area defined by the Groundwater Rules.

1.43 “Unconfined Aquifer” has the same meaning as that defined by the Groundwater Rules.

1.44 “Water Administration Year” has the same meaning as that defined by the Groundwater Rules.

1.45 “Water Conservation Program” means a program adopted by a water conservancy district to satisfy the provisions of C.R.S. § 37-93-103(2) and/or C.R.S. § 37-92-305(3)(c). The Trinchera Water Conservancy District has adopted, and the Trinchera Subdistrict has approved, a Water Conservation Program that affords the protections of C.R.S. § 37-93-103(2) and C.R.S. § 37-92-305(3)(c) to Subdistrict Wells and other water rights within the Trinchera Subdistrict.

1.46 “WDID” means a unique number assigned by the Colorado Division of Water Resources to a water diversion structure to be used as an identification number. The structure identification number and the water district are combined to create an ID number that is unique to each structure throughout the state.

1.47 Unless otherwise defined in this GMP, all of the terms used herein are intended to be defined in the same way as they are defined in the Groundwater Rules.

## 2.0 BACKGROUND AND BASIS FOR THE GROUNDWATER MANAGEMENT PLAN

## 2.1 Current Situation.

2.1.1 Owners and Operators within the Trinchera Subdistrict rely on groundwater for all or part of their commercial, municipal, industrial, irrigated agricultural practices and/or other permitted or decreed uses of water within the Trinchera Response Area. The RGDSS Groundwater Model has calculated stream depletions occurring to surface water streams caused by wells withdrawing water from the groundwater system within the Trinchera Response Area that cause injury to senior surface water rights or unreasonably interfere with the state's ability to fulfill its obligations under the Rio Grande Compact, codified in section 37-66-101, C.R.S. In order to remedy the injury or interference, the State Engineer has promulgated the Groundwater Rules that will have a direct impact on the future use of groundwater within the Trinchera Response Area.

2.1.2 The Groundwater Rules require that wells be regulated so as to achieve and maintain a Sustainable Water Supply in the Unconfined Aquifer with due regard for the daily, seasonal and long-term demand for underground water. This requirement will have a direct impact on the future use of groundwater within the Trinchera Response Area. The Aquifer serves as a valuable underground water storage reservoir with water levels that fluctuate in response to climatic conditions, water supply and water demands, and such fluctuations shall be allowed to continue.

2.1.3 The Trinchera Subdistrict was decreed organized on September 3, 2008 by the District Court for Costilla County in Case No. 2007CV66. The District Court for Water Division No. 3 ("Water Court") entered an order confirming the Subdistrict's ability, as a subdistrict of a water conservancy district, to submit a plan of water management. See ORDER GRANTING TRINCHERA SUBDISTRICT'S MOTION FOR DETERMINATION OF QUESTION OF LAW REGARDING AUTHORITY TO IMPLEMENT A GROUNDWATER MANAGEMENT PLAN dated October 7, 2016 in Case No. 2015CW3024, a copy of which is appended to this GMP as **Appendix A**.

2.1.4 The Trinchera Subdistrict is within the model domain of the RGDSS Groundwater Model, and this GMP is based upon using the RGDSS Model Response Functions for the Trinchera Response Area to determine stream depletions.

## 2.2 Subdistrict Lands and Subdistrict Wells.

2.2.1 **Appendix B** is a map of the Subdistrict Land.

2.2.2 **Appendix C** is a list of all wells that are currently included within this GMP and are Subdistrict Wells. Because the wells to be included as Subdistrict Wells are to be determined pursuant to the petition process described herein, which is

on-going, the Trinchera Subdistrict may update this list from time to time through ARPs without constituting an amendment of the GMP.

2.2.3 The GMP covers only those Subdistrict Wells, which can legally withdraw ground water for a beneficial use pursuant to a well permit, court decree, or both, and for which the Owner or Operator has agreed to participate in and be bound by this GMP, with the approval of the Subdistrict, pursuant to Class B, C, and D petitions to the Subdistrict under C.R.S. §§ 37-45-123 through 125, respectively, or pursuant to contract under C.R.S. § 37-45-131. To the extent that wells within the Subdistrict are operated under plans for augmentation that meet the requirements of the Groundwater Rules, such wells are not Subdistrict Wells and are not covered by the GMP.

2.2.4 Subdistrict Land is limited to lands served by Non-Exempt Wells that withdraw groundwater for a beneficial use that is located within Water Division No. 3. Where a well is used as a source of water for augmentation, substitution or exchange for another water right, such other water right must be diverted within Water Division 3 for a beneficial use located within Water Division No. 3.

2.2.5 To the extent permitted by law, the Subdistrict may, at the discretion of the Board of Directors, contract or enter into cooperative agreements with other well owners, water users, mutual ditch or reservoir companies, water users' associations, conservation districts, conservancy districts, subdistricts, governmental entities, Owners of Farm Units, and other persons or entities within or without the boundaries of the Subdistrict to advance the GMP goals and overall objective. In adopting a Rule for this purpose, the Subdistrict may contract with well owners whose well impacts are not determined by the Trinchera Response Area Response Functions, but can be determined by methods accepted under the Groundwater Rules, and whose impacts are similar to those of Subdistrict Wells.

2.2.6 Subdistrict Land will remain a part of the Subdistrict for as long as the Subdistrict is in existence.

### 2.3 Overall Objective and GMP Goals of the Trinchera Subdistrict.

2.3.1 The principal goals of the Subdistrict are to protect senior surface water rights, to allow Subdistrict Wells to continue to pump in accordance with the GMP and ARPs, to maintain a Sustainable Trinchera Water Supply and to avoid unreasonable interference with the state's ability to fulfil its obligations under the Rio Grande Compact. To achieve these goals, reducing and managing overall groundwater consumption is necessary.

2.3.2 Subdistrict Wells that divert groundwater from the Aquifer presently operate pursuant to well permits and/or decrees recognized under Colorado law. If the Subdistrict is unable to achieve its goals as described above, the State of Colorado, through its administrative rules and regulations, may curtail the diversion of groundwater through Subdistrict Wells.

2.3.3 The overall objective of the GMP is to provide a water management alternative to individual plans for augmentation or state-imposed regulations that limit the use of wells within the Subdistrict; that is a system of self-regulation using economic-based incentives and other measures that promote responsible groundwater use and management and ensures protection of senior surface water rights. The operation of this GMP will comply with the applicable requirements of Senate Bill 04-222, codified at section 37-92-501(4), C.R.S., and any future amendments to this legislation.

## 2.4 Effect of Groundwater Management Plan

2.4.1 Except as provided in paragraph 3.3.1, below, neither the creation of the Subdistrict nor this GMP will alter or affect any vested surface or groundwater rights. Nor shall the creation of the Subdistrict or this GMP expand any existing beneficial use or allow a water right to be used for a beneficial use not contained in a valid decree or permit.

2.4.2 The GMP will not alter or affect the ability of individual water users to exchange, trade, lease, or sell water from surface water diversions to the extent permitted by the articles of incorporation and bylaws of the affected ditch companies and Colorado law, provided that the exchange, trade, lease, or sale proposed does not expand the amount of water consumption.

2.4.3 Water rights acquired or retired by the Subdistrict, or its water activity enterprise, will be used to meet the requirements of the GMP, including without limitation, to replace Injurious Stream Depletions to senior surface water rights attributable to the Subdistrict Wells and to sustain or recover aquifer conditions as required by statute or regulations. Purchased or retired water rights will only be used for purposes consistent with this GMP.

2.4.4 The Trinchera Water Conservancy District has adopted, and the Trinchera Subdistrict has approved, a Water Conservation Program, a copy of which is attached as **Appendix D**. Under §§ 37-92-103(2), C.R.S. and 37-92-305(c), C.R.S., the Owner of a Subdistrict Well or of other water rights within the Trinchera Subdistrict may elect to temporarily reduce the amount of land under irrigation or otherwise reduce the consumptive use of water, and the period of non-use or reduced

use will not be considered to be a period of non-use for purposes of abandonment or reductions in the associated water right, to the extent provided by law.

2.4.5 In remedying Injurious Stream Depletions from Subdistrict Wells, it is not the intent of the Subdistrict to allow or assist in the expansion of historical consumptive use of groundwater above that currently existing under valid permits or decrees. The Subdistrict and this GMP or ARP cannot be used as a source of water for new or expanded plans for augmentation or other replacement plans without the approval of both the Water Court and the Subdistrict's Board of Directors. The Board of Directors will not approve the use of the GMP or the ARP as a source for replacement of a new or expanded use if it would adversely affect the Subdistrict's ability to satisfy its obligation to replace Injurious Stream Depletions or its ability to achieve and maintain a Sustainable Water Supply.

## 2.5 Effective Date of GMP.

2.5.1 This GMP is only effective after approval of the State Engineer pursuant to the Groundwater Rules. If any objections are filed with the Water Court against the State Engineer's approval of the GMP, the GMP will become effective only after the Water Court or an appellate court issues an order approving the GMP.

2.5.2 The Subdistrict will remedy Injurious Stream Depletions that occur as a result of Subdistrict Well groundwater withdrawals made on or after the State Engineer's approval of the Subdistrict's first Annual Replacement Plan, as well as Post-Plan Injurious Stream Depletions affecting a surface stream from Subdistrict Well groundwater withdrawals in prior years and all Post-Plan Injurious Stream Depletions that will occur in subsequent years, as are capable of quantification using the RGDSS Groundwater Model as it currently exists or as it may exist in the future.

2.5.3 The Subdistrict will initiate its program to maintain a Sustainable Trincher Water Supply following the approval of the first ARP in accordance with this GMP and the Groundwater Rules and continuing for each ARP Year thereafter.

## 3.0 DESCRIPTION OF GMP.

### 3.1 General GMP Description.

3.1.1 The Owners or Operators of Subdistrict Wells who have petitioned for coverage under the GMP are required to (1) contribute financially to and to take actions necessary to implement program(s) that the Board of Directors will initiate to ensure Injurious Stream Depletions to senior surface water rights resulting from Subdistrict Well groundwater withdrawals are replaced or otherwise remedied; (2) to maintain a Sustainable Trincher Water Supply in the Aquifer; and (3) to reduce the

total amount of groundwater consumption occurring within the Subdistrict as necessary to achieve and maintain a Sustainable Trinchera Water Supply in the Aquifer.

### 3.2 Acts and Improvements.

3.2.1 To further the goals and objectives of the GMP, the Subdistrict intends to implement some or all of the following non-exclusive list of acts or improvements, at the discretion of the Board of Directors. The following list is deliberately general. Specific acts or improvements, the implementation thereof, or the addition of other acts or improvements not listed herein may be provided in ARPs, without requiring the amendment of this GMP. The Subdistrict also may describe, limit or otherwise condition its acts or improvements through the adoption of Rules.

3.2.1.1 Calculating and replacing or remedying Injurious Stream Depletions, including but not limited to the negotiation, entry and implementation of agreements that allow the remedy of injurious stream depletions other than by replacement.

3.2.1.2 Setting an annual Overall Groundwater Consumptive Use Allocation and annual allocations for Subdistrict Wells.

3.2.1.3 Maintaining a Sustainable Trinchera Water Supply.

3.2.1.4 Purchasing, renting, leasing or retiring of irrigated lands; purchasing, renting or leasing of water rights or reservoir storage, either inside or outside the exterior boundaries of the Subdistrict, to achieve the goals of the GMP.

3.2.1.5 Implementing a program of temporary fallowing, including economic incentives for temporary fallowing, to remove acreage from production to achieve reduction in groundwater consumption necessary to achieve the goals of the GMP.

3.2.1.6 Providing economic credits or incentives for Owners and third parties to provide replacement water, land, or facilities for the benefit of the Subdistrict.

3.2.1.7 Implementing a recharge program.

3.2.1.8 Developing a groundwater level monitoring program.

3.2.1.9 Implementing infrastructure improvements to maximize the diversion, use and recharge of water and to minimize inefficient use of water.

3.2.1.10 Pursuing education, research, and funding of water conservation, water use efficiency, improved water management, and agricultural water use.

3.2.1.11 Supporting or funding of improvement and operation of ditches, headgates, reservoirs or other facilities to make the best use of available water.

3.2.1.12 Implementing or supporting data collection and analysis programs designed to verify and improve RGDSS predictions, further refine the calculation of stream depletions caused by groundwater withdrawals, or otherwise help the Subdistrict achieve GMP objectives.

3.2.1.13 Working, in cooperation with USDA-NRCS and other entities, to develop annual water supply forecasts based on SNOTEL and snow course data to include development of new and improved technologies.

3.2.1.14 Determining historical stream flow volumes based on methods to correlate precipitation to rim inflows.

3.2.2 The Subdistrict intends to pursue any or a combination of these acts and improvements concurrently, or as they become economically viable and physically possible, to achieve the goals of the GMP. The GMP will operate for an indefinite period to ensure the remedy of Injurious Stream Depletions resulting from groundwater withdrawals by Subdistrict Wells and to achieve and maintain a Sustainable Water Supply in the Aquifer, which meets the standards defined in the Groundwater Rules.

3.2.3 At such time as the operation of Subdistrict Wells is not causing Injurious Stream Depletions, the Aquifer is maintained at a level which meets the Sustainable Water Supply standards set out in the Groundwater Rules, all other purposes for which the Subdistrict has been organized are permanently accomplished, and all obligations of the Subdistrict have been satisfied, the Subdistrict can be dissolved.

### 3.3 Other Management Tools.

The Board of Directors will adopt Rules and Regulations, policies, or guidelines to facilitate the operation of the Subdistrict. In order to manage water use within the Subdistrict, the Subdistrict may use some or all of the following acts and policies:

3.3.1 Implementation and enforcement of annual groundwater withdrawal or consumptive use allocations or limits. By petitioning for allotments, the Owners of

Subdistrict Wells have explicitly authorized and agreed to abide by groundwater allocations or limits imposed by the Board of Directors.

3.3.2 Enactment of economic incentives to reduce excessive or inefficient groundwater use as may be reasonably necessary to further the goals and objectives of the GMP, ARP or to comply with Colorado law.

3.3.3 Economic or other penalties for violating Subdistrict Rules and Regulations.

3.3.4 Monthly, quarterly or bi-annual groundwater meter reporting to the Subdistrict.

3.3.5 Contracts with government or other public entities or with persons or entities other than public entities to implement portions of the GMP.

#### 3.4 Protection of Senior Surface Water Rights.

3.4.1 To ensure the protection of senior surface water rights and to avoid unreasonable interference with Colorado's obligations under the Rio Grande Compact, the Subdistrict will utilize a portion of its revenues to remedy any Injurious Stream Depletions determined to occur to surface streams resulting from the operation of Subdistrict Wells.

3.4.2 As required by the Groundwater Rules, the Subdistrict will utilize the then current Response Functions developed by the State for the Trinchera Response Area to calculate the amount, timing and location of stream depletions caused by the withdrawal of groundwater by Subdistrict Wells unless and until the Response Functions are supplanted in the future by a superior technology.

3.4.3 Pursuant to ARPs to be submitted to the State Engineer for approval, the Subdistrict will replace or otherwise remedy Injurious Stream Depletions projected for the then-current year. Doing so may require the Subdistrict to purchase or lease senior water rights, change water rights to permit their use under the GMP, pursue appropriative rights of exchange, obtain the rights to use certain infrastructure, provide aquifer recharge, operate augmentation wells, implement groundwater monitoring programs and protocols, enter agreements under which affected senior water users accept the effect of the well depletions in return for consideration, enter into agreements with other governmental bodies, including but not limited to the Rio Grande Water Conservation District, for either services or replacement water in support of a groundwater management plan or management of the GMP, or to take other measures. The specific arrangements for each year will be described in the pertinent ARP.

3.4.4 According to current results produced by the RGDSS Model, the reaches of surface streams in Colorado that are affected by depletions from the groundwater withdrawals by the Trinchera Subdistrict Wells are: (1) Trinchera Creek below Smith Reservoir (2) the Rio Grande between the Excelsior Ditch and the Chicago Ditch; (3) the Rio Grande between the Chicago Ditch and the New Mexico state line; and (4) the Conejos River below the Seledonia / Garcia Ditches. Currently, no other stream reaches are depleted by groundwater withdrawals by Subdistrict Wells in an amount that requires replacement. If future modifications of the RGDSS Model produce different results, including but not limited to identifying other stream reaches to which replacements must be made, the Subdistrict will replace or otherwise remedy depletions to such reaches as required. Such future operations may be described in ARPs, without a need to amend this GMP. The Subdistrict understands that its replacement obligations under the GMP will vary from year to year, depending on attendant conditions.

3.4.4.1 The Subdistrict has negotiated and is ready to enter into a No Call Agreement (provided to DWR with this GMP) with the owners of affected surface water rights on Trinchera Creek below Smith Reservoir, pursuant to which, among other things, such owners agree to accept Injurious Stream Depletions caused by Subdistrict Wells. This arrangement should satisfy much of the Subdistrict's obligation to replace Injurious Stream Depletions to Trinchera Creek. To the extent necessary to remedy any other Injurious Stream Depletions to Trinchera Creek attributable to the Subdistrict Wells and not covered by the No Call Agreement, the Subdistrict will enter into further agreements with other water users, release replacement water to Trinchera Creek or conduct recharge operations that provide water to Trinchera Creek.

3.4.4.2 If (1) there is sufficient water in the Trinchera Basin and all senior priorities at or above Smith Reservoir and the Rattlesnake diversion are satisfied, (2) Smith Reservoir is spilling and (3) all parties to the No Call Agreement concur, the Stribling and Notley Ball water rights shall be able to divert the water legally and physically available in priority at their respective headgates without being in violation of the Natural Prairie No Call Agreement.

3.4.5 The Subdistrict will replace Injurious Stream Depletions to the Rio Grande or the Conejos River by physically delivering water to that river, whether through the release of surface flows, pumping groundwater, or groundwater recharge operations, or will remedy such Injurious Stream Depletions by means other than providing water, including but not limited to agreements with affected water users, to the full extent required and permitted by law. The sources of replacement water may include stream accretions attributable to lawfully useable groundwater recharge, water rights that have been changed or that are subject to administrative authorization so as

to allow replacement uses under the GMP, releases of stored water decreed or authorized for use under the GMP, or wells that will pump a lawfully useable replacement supply. Among other possibilities, with the approval of the DWR, the Subdistrict may provide replacement water to the Conejos River or the Rio Grande by allowing such waters to flow to the Compact gauge above the New Mexico state line, thereby assisting the Rio Grande or the Conejos River in meeting its delivery obligation under the Rio Grande Compact. Alternatively, to the extent required and permitted by law, the Subdistrict may remedy such depletions by means other than providing water, including but not limited to agreements under which water users whose rights are affected by well pumping accept such injurious depletions in return for an agreed upon consideration.

3.4.6 The Subdistrict may enter into one or more agreements with other “subdistricts” as that term is defined in the Groundwater Rules, , under which one or more of the subdistricts would agree to replace, or otherwise to compensate, Injurious Stream Depletions occurring to a stream reach within one or more of the agreeing subdistricts..

### 3.5 Sustainable Water Supply.

#### 3.5.1 Standards concerning a Sustainable Water Supply

3.5.1.1 Rule 8.3 of the Groundwater Rules provides that: “Except as provided in Rule 8.6, [a rule that relates to alternate plans for a Sustainable Water Supply] plans specified in Rule 6.1 that include Wells located in the Trinchera Response Area must achieve and maintain a Sustainable Water Supply in accordance with this Rule 8.3. Each plan must contain terms that provide for achieving and maintaining a Sustainable Water Supply within 20 years of its effective date.”

3.5.1.2 Rule 8.6 of the Groundwater Rules provides that: “Any Well User or Subdistrict may propose an Alternate Plan that includes a method or standard for determining, achieving, and maintaining a Sustainable Water Supply. The proponent of any such Alternate Plan must demonstrate that an Alternate Plan reliably determines the Sustainable Water Supply and is sufficient to achieve and maintain a Sustainable Water Supply. Regardless of whether an Alternate Plan relies on replacement of groundwater withdrawals by recharge or injection such that the groundwater withdrawals do not have an effect on the Sustainable Water Supply, the Alternate Plan must contain terms that account for the effect of groundwater withdrawals made before the effective date of the Plan on the achievement and maintenance of a Sustainable Water Supply. If an Alternate Plan is used to determine, achieve, and maintain

a Sustainable Water Supply, Wells subject to that Alternate Plan will be curtailed at times the provisions of the Alternate Plan are not met.”

3.5.1.3 Pursuant to Rule 4.29, “‘Sustainable Water Supply’ means a supply of groundwater that is being managed in accordance with sections 37-92-501 (4)(a)(I) through (III), C.R.S.”

3.5.1.4 1.4 Section 37-92-501(4)(a), C.R.S. deals with sustainability in an unconfined aquifer such as the Aquifer underlying the Trinchera Subdistrict, and it provides, in part:

- (I) Use of the confined and unconfined aquifers shall be regulated so as to maintain a sustainable water supply in each aquifer system, with due regard for the daily, seasonal, and long-term demand for underground water;
- (II) Unconfined aquifers serve as valuable underground water storage reservoirs with water levels that fluctuate in response to climatic conditions, water supply, and water demands, and such fluctuations shall be allowed to continue; . . . .

3.5.1.5 The Subdistrict will comply with all Sustainable Water Supply requirements of the Groundwater Rules and of Section 37-92-501(4), C.R.S. The Subdistrict will act to maintain a Sustainable Trinchera Water Supply by limiting and allocating Groundwater Consumptive Use by Subdistrict Wells, as described in this GMP and in Rules and Regulations adopted by the Subdistrict.

### 3.6 Definition of Sustainable Trinchera Water Supply.

3.6.1 A Sustainable Trinchera Water Supply will be considered to exist when the composite water head in the Aquifer on a five-year running average is no more than 17.9 feet below the 1978 composite water head

3.6.2 This level of composite water head is chosen as the lowest at which a Sustainable Water Supply from the Aquifer can be maintained, even with reductions in Groundwater Consumptive Use by Subdistrict Wells, because at levels lower than 17.9 feet below the 1978 composite water head, some of the shallower Subdistrict Wells would no longer have the minimum required pump submergence of 10 feet. Without sufficient pump submergence, a well will cavitate or no longer be able to pump.

3.6.3 The composite water head for the Aquifer is currently at a level of less than 17.9 feet below the composite water head for 1978, and the Aquifer is considered to be in a sustainable condition.

3.6.4 If the composite head in the Aquifer, on a five-year running average, drops to a level of 17.9 feet or more below the composite water head for 1978, the Aquifer will be regarded as not being in a sustainable condition, and no withdrawals will be allowed by Subdistrict Wells until the composite head returns to a level of less than 17.9 feet below the composite water head for 1978.

### 3.7 Sustainability Metric.

3.7.1 The metric for determining whether a Sustainable Trincher Water Supply exists within the Aquifer is a five year running average of the change in composite water head within the Aquifer, compiled as described in this section.

3.7.2 In order to determine the composite water head, the Subdistrict will monitor existing monitoring wells shown in **Appendix E** for the depth to ground water and will add additional monitoring wells to the program as appropriate, using an approach approved by DWR. The monitoring wells currently are monitored at regular intervals by the USGS. The Subdistrict will provide information concerning the composite water head in the Aquifer as part of its ARPs and in the five-year reports described below.

3.7.3 To determine the composite water head, each monitoring well is assigned an area within the Subdistrict that it represents, using the Thiessen polygon method. From this weighting, each monitoring well is assigned a pro-rated percentage of the overall Subdistrict area that it represents. The minimum annual depth to water is calculated from periodic monitoring. It represents the shallowest measurement of the depth to water for the year. The minimum annual depth to water tends to occur in the spring just prior to the irrigation season, as the Aquifer has had the longest time since pumping to recover and equilibrate. Going forward, the Subdistrict will use the data from a measurement taken in March, or if there is not a measurement taken in March, from the measurement closest to March 15.

3.7.4 The change in the minimum annual depth to water from the 1978 baseline is calculated for each well. This change in depth to water is then multiplied by the percent weighting for each monitoring well and summed for all wells in the monitoring network to determine the annual change in the composite water level for the Trincher Response Area. A 5-year rolling average of the change in composite water head is then calculated by averaging the annual change in composite water level for the current year with the prior four years.

3.8 Goal. The goal of the Subdistrict is to maintain a Sustainable Trinchera Water Supply in the Aquifer, in which Net Groundwater Consumptive Use by Subdistrict Wells is managed in accordance with the groundwater levels within that Aquifer. The Subdistrict will accomplish this goal as described herein and in its Rules and Regulations, which may be amended from time to time, and by: (1) annually setting an Overall Groundwater Consumptive Use Allocation for all Subdistrict Wells; (2) annually setting Farm Unit Allocations and allocations to Class B, Class C and Contract Wells; and (3) other measures employed by the Subdistrict as described in its Rules and Regulations and Sections 3.3, 3.4 and 3.7 of this GMP.

3.9 Accomplishment of goals.

3.9.1 The Subdistrict has evaluated the Aquifer by studying the composite water head over time. The Subdistrict recognizes a relationship between the composite water head within the Aquifer and the Groundwater Consumptive Use that can be sustainably consumed. The Subdistrict considers the Aquifer to be describable in terms of tiers, in which a certain amount of Groundwater Consumptive Use may occur consistent with achieving and maintaining a Sustainable Water Supply. The parameters of the tiers and the amount of permissible Groundwater Consumptive Use by Subdistrict Wells within each such tier are described more fully in the Subdistrict Rules and Regulations.

3.9.2 Ultimately, the Subdistrict will limit the amount of Groundwater Consumptive Use by Subdistrict Wells that may be withdrawn and consumed in agricultural irrigation in accordance with the tier within which the composite water head exists. Allocations to municipal and commercial Subdistrict Wells may be for specified annual amounts, but the Subdistrict reserves the ability to change, and specifically to reduce, such amounts in light of Aquifer conditions.

3.10 Compliance with sustainability metric.

3.10.1 In order to provide a process for reviewing the Subdistrict's Farm Unit Allocations and for assessing whether the Subdistrict is achieving and maintaining a Sustainable Water Supply in the Aquifer, the Subdistrict shall provide a report to the State Engineer every five years, which describes:

- (1) The composite head in the Aquifer for each year within the five-year period.
- (2) The composite head in the Aquifer on a five year running average.
- (3) The monitoring wells used to determine the composite head in the Aquifer and the data collected from such monitoring wells.

- (4) The amount of the Overall Groundwater Consumptive Use Allocation that was committed to Farm Unit Allocations in each of the five years.
- (5) The Net Groundwater Consumptive Use for agricultural irrigation by Subdistrict Wells for each of the five years.
- (6) The Net Groundwater Consumptive Use for purposes other than agricultural irrigation by Subdistrict Wells for each of the five years.

3.10.2 As part of the ARP process, the Subdistrict will provide DWR an annual summary and graphs of the information described in paragraph 3.6.6.1 and will provide the monitoring well data collected for the previous year.

3.11 Proportional division of responsibility for Sustainable Water Supply.

3.11.1 Rule 8.7 of the Groundwater Rules provides that: “All Plans specified in Rule 6.1 that are required by this Rule 8 to achieve and maintain a Sustainable Water Supply must provide for the proportional division of the responsibility for achieving and maintaining a Sustainable Water Supply as between all Well Users in each of the Response Areas in which the Wells included in the GMP are located. The proportional division of the responsibility for achieving and maintaining a Sustainable Water Supply will be based upon each Well’s past, present and future groundwater withdrawals, unless the GMP’s participants agree among themselves on another method of allocation of responsibility of the GMP’s participants.”

3.11.2 The Aquifer is considered to currently be in a sustainable state and the Groundwater Consumptive Use by Subdistrict Wells will be managed and curtailed if and as necessary by the Subdistrict to maintain the Aquifer in that state. The Well Owners for the Subdistrict Wells used for irrigation to be included in the GMP have agreed, pursuant to their Class D petitions under C.R.S. § 37-45-125, to the proportionate allocations of the Overall Groundwater Consumptive Use Allocation for irrigation under the GMP as Farm Unit Allocations, after non-irrigation allocations of the Overall Groundwater Consumptive Use Allocation pursuant to C.R.S. § 37-45-123, C.R.S. § 37-45-124, and via contract under C.R.S. § 37-45-131, have been satisfied, and that their withdrawals pursuant to those allocations will be proportionately reduced by the Subdistrict to limit present and future Groundwater Consumptive use as necessary to maintain and manage the Aquifer in a sustainable state.

3.11.3 Should there be wells that are within the Trinchera Response Area, but are not covered by this GMP (“Other Wells”), and should the Other Wells be held to the same standards for achieving and maintaining a Sustainable Water Supply as apply to the Subdistrict, the proportional division of the responsibility for achieving

and maintaining a Sustainable Water Supply will be based upon each well's past, present and future groundwater withdrawals. If the Other Wells are not held to the same standards for achieving and maintaining a Sustainable Water Supply as apply to the Subdistrict Wells, the Subdistrict may propose a different division of the responsibility for achieving and maintaining a Sustainable Water Supply

3.11.4 Should Other Wells within the Trinchera Response Area seek operation pursuant to a plan for augmentation or inclusion in a plan by a different subdistrict, the Subdistrict will oppose or participate in those proceedings to confirm that such wells are required to operate in a manner that does not compromise the maintenance of a Sustainable Trinchera Water Supply and that those wells are required to share a proportional responsibility for either maintaining or recovering a Sustainable Water Supply based on their past, present and future groundwater withdrawals.

3.12 Accounting for the effect of previous groundwater withdrawals. Because the sustainability portions of this GMP are based upon past and future composite water heads, which are influenced by past well operations, the GMP does "contain terms that account for the effect of groundwater withdrawals made before the effective date of the GMP on the achievement and maintenance of a Sustainable Water Supply", as required by the Groundwater Rules.

3.13 Pumping Allocations.

3.13.1 The Subdistrict will annually set an Overall Groundwater Consumptive Use Allocation that may be diverted and consumed through the use of Subdistrict Wells. This allocation will be limited by the amount and location of Injurious Stream Depletions that the Subdistrict is required to replace; the identity, amount, location and other characteristics of replacement sources that the Subdistrict has; the agreements that the Subdistrict has that allow the Subdistrict to compensate for Injurious Stream Depletions other than by providing replacement water; and the requirements to achieve and maintain a Sustainable Trinchera Water Supply.

3.13.2 The Subdistrict will allocate water to Class B, Class C and contract wells, based upon the allowable annual consumptive use for such wells, before allocating the remainder of the Overall Groundwater Consumptive Use Allocation to Class D Subdistrict Wells.

3.13.3 The Subdistrict will annually set Farm Unit Allocations. It will be a condition of approval for Class D petitions, Class B and C petitions or contractual agreements with municipalities or other public corporations, and petitions or contracts with the users of commercial or industrial wells, that Owners of Subdistrict Wells will accept such pumping or groundwater consumptive use allocations as the Subdistrict

determines are necessary and will allow the Subdistrict to charge an additional over-pumping fee for pumping that causes net groundwater consumptive use in excess of the allocation.

3.13.4 The Groundwater Consumptive Use Allocation will be allocated among Subdistrict Wells used for irrigation in accordance with Farm Unit Allocations set by the Subdistrict, but only in years when conditions permit Farm Unit Allocations to be made.

3.13.5 Further specifics of this program will be described in the Subdistrict's Rules and Regulations and in its ARPs.

3.13.6 Owners and Operators will be allowed to trade Farm Unit Allocations among themselves in accordance with applicable decrees and permits and Rules and Regulations to be adopted by the Subdistrict.

#### 3.14 Contracting Authority.

3.14.1 The Subdistrict may contract with willing surface water rights holders to purchase or lease water and temporarily or permanently to change the water rights so as to be legally able to be used for recharge, storage, augmentation or other means to replace injurious stream depletions from the operation of Subdistrict Wells, and may (but shall not be required to) purchase or lease lands associated with such water. The Subdistrict may also contract with surface water right holders to purchase or lease any available surplus augmentation credits from qualifying court approved plans for augmentation to advance the GMP goals and overall objectives.

3.14.2 Any funds collected from contracts with non-Subdistrict entities will be applied to advance the GMP goals and overall objective or as an offset of the administrative costs of managing the Subdistrict.

### 4.0 SUBDISTRICT COSTS, FEES AND CHARGES

#### 4.1 General Basis of Fees and Charges.

4.1.1 The Subdistrict is entitled to raise funds by assessment of fees to carry out the goals and overall objective set forth in this GMP. The Subdistrict intends to finance its costs by raising sufficient revenue, in a fair and equitable manner, through the imposition of such fees. As a subdistrict of a water conservancy district, the Subdistrict has the powers granted in C.R.S. §37-45-121 and subsequent sections to make assessments. The Subdistrict will rely upon these and its other statutory authority to finance its activities under GMP and ARPs.

4.1.2 The Subdistrict expects to need to raise funds to finance legal, engineering, accounting, administrative services, payments under forbearance, no call or similar agreements, payments for replacement water supplies and use of necessary facilities (either leased or owned), measures to meet sustainability requirements and any other programs, acts, improvements or expenditures needed to comply with the GMP and ARPs.

4.1.3 The Subdistrict will adopt an annual budget specifying the funds needed for the forthcoming year and the projected use of such funds.

4.1.4 **Appendix F** is the “proposed budget and accounting for the plan” required by Rule 9.1.1.5.

4.1.5 The Subdistrict will be required to have a portfolio in place which can sufficiently remedy Post-Plan Injurious Stream Depletions as a condition of the Division of Water Resources’ approval of any ARP. This portfolio may include money, water, long-term forbearance agreements and/or a suitable guarantee that contractual payments to the Subdistrict and Subdistrict assessments under C.R.S. § 37-45-123 through 125 will continue in an amount necessary and for so long as necessary to replace Post-Plan Injurious Depletions. Should Subdistrict Wells not be allowed to continue to withdraw groundwater because Subdistrict objectives and goals are not being met, the Subdistrict may continue to assess fees until all Post-Plan Injurious Stream Depletions caused by past groundwater withdrawals from Subdistrict Wells have been remedied.

#### 4.2 Description of Fees.

4.2.1 In order to raise funds, the Subdistrict expects to use Class A assessments. These may be used to pay the “expenses of organization, for surveys and plans, and for paying the costs of construction of, operating and maintaining the works” of the Subdistrict.

4.2.2 The Subdistrict will primarily rely on Class B, C and D assessments to generate revenues to meet its obligations under the GMP and ARPs, including but not limited to repayment of loans and interest payments.

4.2.3 Class D assessments are made pursuant to C.R.S. § 37-45-125, based upon a contractual arrangement with the Owners whose Subdistrict Lands are to benefit from the GMP. The contractual arrangements are expressed in Class D petitions submitted to and approved by the Subdistrict. An Owner would be allocated a portion of the Overall Groundwater Consumptive Use Allocation as all or part of a Farm Unit Allocation, in return for the payment of Class D assessments and

compliance with the terms and conditions of the Subdistrict's acceptance of the Owner's petition.

4.2.4 The Owner will pay an Administrative Fee, as determined by the Subdistrict Board to be sufficient to pay those Plan Costs determined by the Subdistrict Board that are necessary for administration of the Plan and ARPs. The Administrative Fee will be a flat fee that is charged per well for each of the Owner's Subdistrict Wells (active and inactive), to be set by the Subdistrict Board. This fee may vary from year to year.

4.2.5 The Owner also will pay fees based upon the Subdistrict Board's determination of the budgeted amounts that are necessary to pay for Plan Costs associated with: (1) replacing injurious stream depletions attributable to the Owner's Subdistrict Wells for the current ARP year and for anticipated future ARP years, as determined by the Subdistrict Board; and (2) actions necessary to achieve and maintain a Sustainable Water Supply, that are not covered by the Administrative Fee. The fees for each Farm Unit, which will be set annually by the Subdistrict Board and may vary from year to year, will be based on the volume of groundwater consumptive use associated with groundwater withdrawals by the Subdistrict Wells assigned to that Farm Unit. Allocation of the foregoing costs and the calculation of the fees to be assessed against the Owner's Subdistrict Lands will be based, in a manner to be determined by the Subdistrict Board of Directors, upon the following components:

(1) Past Pumping Fee. This is a fee to provide replacement water or other means to prevent injury from Post-Plan Injurious Stream Depletions. The amount will be determined based upon the amount of replacement water or the extent of forbearance agreements necessary to prevent injury under the upcoming ARP from delayed stream depletions attributable to prior pumping of the Owner's Subdistrict Wells, as determined by available data;

(2) Current Pumping Fee. The Current Pumping Fee (aka Current Consumptive Use Fee) will be set by the Subdistrict Board to cover the operating budget of the Subdistrict for the Plan and ARPs, including the costs of replacement supplies to cover stream depletions and other costs associated with pumping and depletions during the current ARP year, including achieving and maintaining a Sustainable Water Supply in the Unconfined Aquifer; and

(3) Over-Pumping Fee (aka Over-Consumptive Use Fee). Withdrawals by Owner's Subdistrict Wells in excess of withdrawals permitted by the Farm Unit Allocation for the Farm Unit to which the Owner's Subdistrict Wells are assigned.

4.2.6 Fees under Class B and Class C and other contracts will be described in the documents creating the contractual arrangement and in the Subdistrict's Rules and Regulations.

4.2.7 By voluntarily petitioning for a Class B, C or D assessment or agreeing to a contract pursuant to C.R. S. § 37-45-131, the Owners authorize, and agree to abide by, any Groundwater Consumptive Use Allocation of the Subdistrict to their wells. The Owners will further agree that the Subdistrict may impose penalties, including exclusion from the ARP, reasonably necessary to further the goals or objectives of the GMP or to comply with Colorado law. These covenants, as specifically set forth in the individual petition or contract, will bind the Owner and their successors to the Subdistrict Land so encumbered.

4.2.8 The Owners' Subdistrict Lands will be subject to a lien for failure to pay assessments, which lien will be enforceable by the Trinchera Subdistrict or upon assignment by the Subdistrict, by the Trinchera Water Conservancy District.

4.2.9 The Trinchera Subdistrict plans to enter into Class B and C allocation agreements with municipalities and other public corporations under C.R.S. §§ 37-45-123 and 124, that use wells for other beneficial uses, including but not limited to municipal and domestic type uses. Similarly, there may be a limited number of Class D assessment contracts with private parties who use wells for commercial, domestic, stock, industrial, augmentation, mining, fire protection or dust suppression uses. These contracts will have fee structures generally similar to the Class D irrigation assessment contracts but may vary in some particulars. The parties operating under Class B, Class C and other contractual arrangements will have similar obligations and commitments to those of parties operating under Class D arrangements.

4.2.10 These arrangements may be further described in the Subdistrict's Rules and Regulations.

#### 4.3 Wells Covered by Plans for Augmentation.

4.3.1 As stated in paragraph 2.2.3 above, wells within the Subdistrict that are operated under plans for augmentation that meet the requirements of the Groundwater Rules are not included within this GMP. If, however, there are wells within the Subdistrict that are subject to a plan for augmentation that does not fully meet the requirements of the Groundwater Rules, and if such wells are added to this action of the Subdistrict Board, then the following provisions shall apply to such wells.,

4.3.1.1 Such wells will be assessed an Administrative Fee.

4.3.1.2 Such wells will be assessed a Past Pumping Fee and Current Pumping Fee and potentially an Over-Pumping Fee on the amount of groundwater withdrawals that are not included within a plan for augmentation that meets the requirements of the Groundwater Rules., The Subdistrict will consult with the Division of Water Resources' staff to determine the amount of groundwater that was withdrawn by such wells and not covered under plans for augmentation.

#### 4.4 Contract Wells.

4.4.1 To the extent permitted by law, the Subdistrict may contract with well owners to include wells in the GMP if the impacts from the wells can be determined using the methodology the Subdistrict will use to calculate Injurious Stream Depletions from Subdistrict Wells, or otherwise have an approved alternate method of calculating Injurious Stream Depletions. Any contract to include a well in the Subdistrict's GMP and ARPs will include provisions to comply with all Sustainable Water Supply requirements of the Groundwater Rules, this GMP and any ARP that includes Contract Wells.

4.4.2 Such contracts may be subject to a contract fee. Contract Wells may be assessed fees that are in addition to or different from those assessed to Subdistrict Wells.

4.4.3 Additional terms and conditions may be included in contracts if the Board of Directors deems it necessary or desirable to meet the goals of the Subdistrict. Such terms and conditions may be further described in Rules and Regulations adopted by the Subdistrict.

#### 4.5 Appeal Procedures.

The Subdistrict Board may develop Rules and Regulations to govern appeals from its determinations, including but not limited to fees assessed and the time limits on the ability to file an appeal. In any event, the provisions of Section 37-45-127 C.R.S. (regarding appeals of assessments) and of the Colorado Administrative Procedures Act will apply.

#### 4.6 Consequences of Non-compliance.

Failure to pay fees and assessments, including interest and penalties, and the costs of collection, will create a lien against the Owner's Subdistrict Land and Subdistrict Wells, which may be sold for delinquency under C.R.S. §§ 37-45-128 and 129. Further, the Subdistrict may curtail the Owner's pumping or terminate the inclusion of the Owner's Subdistrict Wells in the GMP or ARPs, in the event of the well owner's non-payment or failure to comply with the terms and conditions of the GMP or an ARP.

#### 4.7 Water Activity Enterprise.

To the extent the Subdistrict needs to acquire water rights or to acquire or construct facilities, it may be necessary for the Subdistrict to take on debt, either in the form of bonds or loans, subject to compliance with the Water Conservancy Act, C.R.S. § 37-45-101, et seq., Colo. Const., Art. X, § 20 (“TABOR”), and C.R.S. § 29-1-301, *et seq.* The Subdistrict may do so itself, but it also may utilize a water activity enterprise formed and operated in accordance with C.R.S. § 37-45.1-101, et seq.

### 5.0 ANTICIPATED BENEFITS

#### 5.1 Subdistrict Benefits.

Anticipated benefits of the implementation of the GMP include:

5.1.1 Remediating injury to senior surface water rights;

5.1.2 Maintaining a Sustainable Trinchera Water Supply for Subdistrict Wells;

5.1.3 Avoiding state-imposed groundwater regulation and the attendant need to have costly plans for augmentation approved by the Water Court as a condition for the continued operation of wells; and.

5.1.4 Preventing unreasonable interference with Colorado’s obligations under the Rio Grande Compact.

#### 5.2 Benefits to the San Luis Valley.

Compliance with the Groundwater Rules and with this GMP and the resulting stabilization of water levels within the Subdistrict will have broad benefits to the economy of the San Luis Valley as a whole including, but not limited to, contributing to maintenance of a Sustainable Water Supply which may enrich the vibrant agricultural community.

### 6.0 STATE OF COLORADO REPORTING REQUIREMENTS

#### 6.1 Annual Replacement Plan.

6.1.1 On an annual basis, as required by the Groundwater Rules, the Subdistrict must prepare and submit an ARP to the State and Division Engineers for approval. The report will detail Subdistrict operations for the ARP Year.

6.1.2 The ARP will include: a database of Subdistrict Wells that will be covered by the ARP; a projection of the groundwater withdrawals from Subdistrict

Wells during the current ARP Year; a calculation of the projected stream depletions resulting from groundwater withdrawals from Subdistrict Wells; detailed information regarding the methods that will be utilized to replace or remedy injurious stream depletions during the ARP Year, including any contractual agreements used for replacement or remedy of injurious stream depletions that will be in place; any information regarding the fallowing of Subdistrict Lands; information documenting progress toward achieving and maintaining a Sustainable Water Supply; and documentation that sufficient funds are or will be available to carry out the operation of the ARP.

6.1.3 In the ARP wells can be added to or deleted from the list of wells covered by the GMP without needing to amend the GMP.

6.1.4 The State Engineer must approve the ARP for Subdistrict Wells to be allowed to continue making groundwater withdrawals in any Water Administration Year. The State Engineer will only approve the ARP if the Subdistrict has provided sufficient evidence and engineering analysis to predict when and where stream depletions will occur and how the Injurious Stream Depletions will be replaced or remedied.

## 6.2 Annual Report.

### 6.2.1 Preliminary Annual Report.

6.2.1.1 On an annual basis on or before March 1 of each year, as required by the Groundwater Rules, the Subdistrict must submit a preliminary report to the State and Division Engineers analyzing the operation of the then current ARP. The Subdistrict will prepare this analysis utilizing available data for information predicted in the ARP.

### 6.2.2 Final Annual Report.

6.2.2.1 On an annual basis before July 1 of each year, as required under the Groundwater Rules, the Subdistrict must submit a final report to the State and Division Engineers analyzing the operation of the previous ARP. This final report will finalize the analysis that was completed in the preliminary annual report.

6.2.2.2 The analysis included in the annual report will enable the State and Division Engineers, as well as other interested parties, to review and evaluate the effectiveness of the Subdistrict's ARP on an annual basis. It also enables the Subdistrict to assess the effectiveness of its operations on an annual basis.

## 7.0 BUDGET AND ACCOUNTING PLAN

7.1 The Board of Directors will prepare a detailed annual budget for the ensuing year. The Subdistrict will post notice of the annual budget prior to the Subdistrict Board's meeting to review the annual budget to allow for public comment from Owners and the public. Once approved by the Subdistrict Board, the Subdistrict's annual budget will be included in the annual budget which is approved and submitted to the State of Colorado.

7.2 The annual Subdistrict budget will include detailed descriptions of the activities to be undertaken for the purpose of operating and administering the ARP and this GMP and details of the amount and type of revenues that are required to fund these budgeted expenditures.

7.3 The annual Subdistrict budget will contain a detailed description of the anticipated expenditures for operation of the ARP and this GMP, including but not limited to: expenses for the lease, loan or purchase of water or water rights to be used to replace or remedy injurious stream depletions; expenditures for contracts to replace or remedy injurious stream depletions; expenditures to achieve and maintain a Sustainable Trinchera Water Supply; expenditures to obtain approvals of any ARP, including judicial review; expenditures for changes of water rights or other Water Court actions; legal and engineering expenses; expenditures for any Subdistrict programs to reduce the overall withdrawal of groundwater from Subdistrict Wells; any amounts necessary to establish a reserve fund; and itemized administrative expenses for the ensuing year.

7.4 The annual Subdistrict budget will contain a detailed description of the anticipated revenues necessary to fund the annual budget including details regarding the assessments of fees.

7.5 The Subdistrict must limit the expenditures and revenues to the amounts specified in the annual budget unless an amended budget is adopted, after proper notice, in accordance with the provisions of Colorado Law.

## 8.0 ANNUAL OPERATIONAL TIMELINE

### 8.1 Annual Subdistrict Activities.

#### 8.1.1 Farm Unit Updates.

Farm Units are used by the Subdistrict to identify which individual or entity owns or manages Subdistrict Lands and Subdistrict Wells. Information recorded about the Farm Unit is utilized during the Subdistrict's fee calculation process. Requests for updates to Farm Units will be mailed to each Owner or Operator of a Farm Unit on record with the Subdistrict on an annual basis.

#### 8.1.2 Submittal of Groundwater Withdrawals from Wells Not Required To Be Metered.

All Non-Exempt Wells that are subject to inclusion within the GMP and ARPs are required to have meters pursuant to DWR's Measurement Rules. Nonetheless, should there be any Owner or Operator whose Subdistrict Well or Wells are not required to be metered under the State's Measurement Rules, that Owner or Operator must have a measurement method approved by the Subdistrict, pursuant to Rules describing the process for securing an acceptable alternative measurement method, and by the DWR. Any Subdistrict Well groundwater withdrawals for the prior Water Administration Year that are being measured by a Subdistrict-approved method must be submitted to the Subdistrict and the DWR each year.

#### 8.1.3 Annual Subdistrict Fee Calculation Process.

During the annual fee calculation process, the Subdistrict will download the records kept by DWR Division No. 3 to calculate groundwater withdrawals for each Subdistrict Well. The Subdistrict will use DWR's records, along with the withdrawals reported to the Subdistrict in paragraph 8.1.2 above, to calculate the groundwater withdrawals (and consumptive use for irrigation wells) for each Subdistrict Well. The Subdistrict will also review the status for each Subdistrict Well during the prior ARP Year for purposes of calculating the fees described above.

#### 8.1.4 Notice of Subdistrict Calculations.

The Subdistrict will mail out a notice to each Subdistrict Well owner when the fee calculation process is complete. Notices will identify the groundwater withdrawals, including the diversion records for each year used in the fee calculation, and the calculated consumptive use for irrigation wells. Owners will be allowed sufficient time to contact the Subdistrict to review this information and appeal if necessary.

#### 8.1.5 Certification of the Annual Service and User Fees.

The Subdistrict will ask for current ownership records for all Subdistrict Lands from the County Assessor during the annual fee calculation process. All annual fees will be assessed to the then current Owner of the Subdistrict Land. All annual fees will be certified to each County Treasurer in every County which encompasses Subdistrict Land.

#### 8.2 Detailed Operation Timeline.

The attached **Appendix G** contains a detailed operational timeline for the activities described in Paragraph 8.1 as required by 9.1.1.6 of the Rules.

## Appendix A to Trinchera Subdistrict GMP

DISTRICT COURT, WATER DIVISION 3, COLORADO Alamosa County Court House, 702 4th Street Alamosa, CO 81101 (719) 589-4996	<div style="text-align: right; color: blue;">         DATE FILED: October 7, 2016 10:16 AM          CASE NUMBER: 2015CW3024       </div>
<b>IN THE MATTER OF THE RULES GOVERNING          THE WITHDRAWAL OF GROUNDWATER IN          WATER DIVISION 3 (THE RIO GRANDE BASIN)          AND ESTABLISHING CRITERIA FOR THE          BEGINNING AND END OF THE IRRIGATION          SEASON IN WATER DIVISION NO. 3 FOR ALL          IRRIGATION WATER RIGHTS.</b>	<div style="text-align: center; border-top: 1px solid black; border-bottom: 1px solid black;"> <b>▲ COURT USE ONLY ▲</b> </div>
IN ALAMOSA, MINERAL, RIO GRANDE, SAGUACHE, HINSDALE, CONEJOS, COSTILLA, AND ARCHULETA COUNTIES, COLORADO	Case No. 2015CW3024 Division 1
<b>ORDER GRANTING TRINCHERA SUBDISTRICT'S MOTION FOR          DETERMINATION OF QUESTION OF LAW REGARDING AUTHORITY TO          IMPLEMENT A GROUNDWATER MANAGEMENT PLAN</b>	

On July 8, 2016, the Protestant, Groundwater Management Subdistrict of the Trinchera Water Conservancy District ("Trinchera Subdistrict"), pursuant to C.R.C.P. 56 (h), filed its Motion for Determination of Question of Law Regarding Authority of Water Conservancy District Subdistricts to Implement a Groundwater Management Plan ("Trinchera Subdistrict Motion").

The Conejos Water Conservancy District ("Conejos District") joined in the Trinchera Subdistrict Motion on July 27, 2016.

The Trinchera Subdistrict filed a Correction to Trinchera Subdistrict Motion on July 29, 2016.

The State Engineer and Division Engineer ("Engineers") filed a response to the Trinchera Subdistrict Motion on July 29, 2016. The Engineers did not take a position on the merits of the motion. Their response, however, stated that: "the Engineers believe that any order confirming the ability to use groundwater management plans should be limited to the question at hand, use within Division 3 and pursuant to §37-92-501(4)(c)."

The Engineers have reviewed and approved this proposed Order, which was prepared to satisfy the position expressed in their response.

The Court, having considered the parties' submissions and the relevant law, rules as follows:

1. The issue presented is whether as a matter of law, the governing Colorado statutes authorize a subdistrict of a Water Conservancy District, such as the Trinchera Subdistrict, to develop, submit for approval, and, if approved, to implement a groundwater management plan.

2. Rule 56(h) provides the relevant standard of review for the Trinchera Subdistrict Motion: "if there is no genuine issue of material fact necessary for the determination of the question of law, the court may enter an order deciding the question."

3. The Court finds that there is no genuine issue of material fact necessary for the determination of the question of law.

4. The Trinchera Subdistrict is a subdistrict of the Trinchera Water Conservancy District.

5. Section 37-92-501(4) (c), C.R.S., reads as follows:

The state engineer shall not curtail underground water withdrawals from aquifers in division 3 that are included in a ground water management subdistrict created pursuant to section 37-45-120 or 37- 48-108 if the withdrawals are made pursuant to a groundwater management plan adopted by the subdistrict that meets the requirements of paragraphs (a) and (b) of this subsection (4).

6. The Proposed Rules Governing the Withdrawal of Groundwater in Water Division 3 (the Rio Grande Basin) and Establishing Criteria for the Beginning and End of the Irrigation Season in Water Division 3 for all Irrigation Water Rights (the "Proposed Rules") define a "Groundwater Management Plan" as a plan adopted by a Subdistrict that meets the requirements of Sections 37-92-501(4)(a) and (b), C.R.S. The Proposed Rules further define a "Subdistrict" as an entity created pursuant to Sections 37-48-123 or 37-45-120, C.R.S.

7. The Court concludes that a subdistrict of a Water Conservancy District formed pursuant to Section 37-45-120, C.R.S., such as the Trinchera Subdistrict, has the authority to develop and implement groundwater management plans under the relevant statutes and the Proposed Rules.

THEREFORE, it is ordered that, as a matter of law, the governing Colorado statutes, including Section 37-92-501(4)(c), C.R.S., authorize a subdistrict of a Water Conservancy

District formed pursuant to Section 37-45-120, C.R.S., in Water Division 3, such as the Trinchera Subdistrict, to develop, submit for approval, and, if approved, to implement a groundwater management plan in Water Division 3, and that the Proposed Rules shall be interpreted to allow this result.

So ORDERED this 7th day of October, 2016.

BY THE COURT:

---

Hon. Pattie P. Swift  
Water Judge, Water Division 3

# Appendix D to Trinchera Subdistrict GMP

## JOINT RESOLUTION AND ADOPTION OF WATER CONSERVATION PROGRAM

The Boards of Directors of the Trinchera Water Conservancy District (“Trinchera District”) and of the Groundwater Subdistrict of the Trinchera Water Conservancy District (“Trinchera Subdistrict”), by votes taken on February 26, 2020, hereby adopt the following Water Conservation Program.

### Recitals

A. C.R.S. § 37-92-103(2) provides that:

Any period of nonuse of any portion of a water right shall be tolled, and no intent to discontinue permanent use shall be found for purposes of determining an abandonment of a water right for the duration that: ...The nonuse of a water right by its owner is a result of participation in: (I) A water conservation program approved by a state agency, a water conservation district, or a water conservancy district;

B. C.R.S. § 37-92-305 (3)(c) provides that:

In determining the amount of historical consumptive use for a water right in division 1, 2, 3, 4, 5, or 6, the water judge shall not consider any decrease in use resulting from the following:

\*\*\*\*\*

(II) The nonuse or decrease in use of the water from the water right by its owner for a maximum of five years in any consecutive ten-year period as a result of participation in:

(A) A water conservation program, including a pilot program, approved in advance by a water conservation district, water district, water authority, or water conservancy district for lands that are within the entity's jurisdictional boundaries ...;

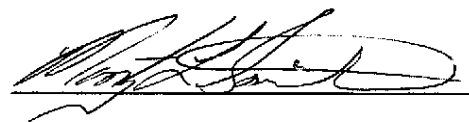

C. The Trinchera Subdistrict is authorized to pursue and is pursuing approval of a groundwater management plan (“GMP”) and subsequent annual replacement plans (“ARPs”) pursuant to the Rules Governing the Withdrawal of Groundwater in Water Division No. 3 (The Rio Grande Basin) and Establishing Criteria for the Beginning and End of the Irrigation Season in Water Division No. 3 for All Irrigation Water Rights (“SEO Rules”).

- D. The objectives of the GMP and the ARPs include the attaining and maintenance of sustainable conditions in the aquifer underlying the Trinchera Subdistrict and the reduction of injurious depletions caused by the operation of wells within the Trinchera Subdistrict.
- E. It will serve the objectives of the GMP and the ARPs if water users within the Trinchera Subdistrict are allowed voluntarily to limit use of water rights if such rights are protected from abandonment or reduction due to the nonuse or decrease in use of the water from the water right, to the extent allowed by C.R.S. §§ 37-92-103(2) and 37-92-305(3)(c)

NOW, THEREFORE, the following Water Conservation Program is established by the Trinchera Water Conservancy District and by the Trinchera Subdistrict

1. Any owner of a water right within the Trinchera Subdistrict, who wishes to reduce the use of such water right, subject to the protections of C.R.S. §§ 37-92-103(2) and 37-92-305 (3)(c), may do so upon application to and approval by the Board of Directors of the Trinchera Subdistrict.
2. The application to the Trinchera Subdistrict shall include the name of the owner of the water right; a description of the water right(s) to be conserved, including the source, location, decree information and permit information; location and amount of lands historically irrigated; the number and location of acres to be removed from irrigation; and any other relevant information requested by the Trinchera Subdistrict Board.
3. The Trinchera Subdistrict, Natural Prairie Colorado Farmlands Holdings, LLC ("Natural Prairie") and others will be entering into a No-Call Agreement ("No-Call Agreement"), which provides among other things that Natural Prairie will forgo or reduce the use of certain water rights. The No-Call Agreement, as presented to the Boards on February 26, 2020 is hereby approved as consistent with and incorporated into this Water Conservation Program. Natural Prairie shall be afforded the protections of this Water Conservation Program to the extent permitted by law.

Dated this 27<sup>th</sup> day of February, 2020

**Monty Smith**, President of the  
Trinchera Water Conservancy District

# Appendix F to Trinchera Subdistrict GMP

GROUNDWATER MANAGEMENT SUBDISTRICT OF THE TRINCHERA WATER CONSERVANCY DISTRICT									
2020 PROPOSED BUDGET									
2019 ASSESSED VALUATION: \$15,112,645/ MILL LEVY: 1.50				2020 Proposed Allotment				23000	acre feet
<b>REVENUE</b>									
Beginning Cash Balance			49,170.04						
Tabor Reserve (Beginning Balance)			7,970.50						
2019 Mill Levy			22,668.97						
Prior Year Mill Levy			0.00						
Delinquent Assessments			0.00						
Interest			100.00						
Administrative Fees (2020)			94,500.00						
Groundwater Withdrawal Fees	25	/acre foot	575,000.00						
Past Pumping		97750		17%					
Current Pumping		431250		83%					
Over Pumping			0.00	(Up to 10X current pumping)					
(Treasurer's Fee)			0.00						
<b>Total Proposed Revenue</b>			<b>749,409.51</b>						
<b>DISBURSEMENTS</b>									
<b>PLAN DEVELOPMENT COSTS:</b>									
Salaries/ Benefits			15,000.00						
Legal Fees/Court Costs			90,000.00						
Office Supplies / Postage			150.00						
Meeting/Conference Expenses			150.00						
Engineering Expense			68,000.00						
<b>Total Plan Development Cost</b>			<b>173,300.00</b>						
<b>PLAN OPERATION COSTS:</b>									
Replacement Water Acquisition (Wet Water)			262,500.00	(75% of portfolio)					
Forbearance Agreements			87,500.00	(25% of portfolio)					
Ending Cash Balance			26,139.01						
Ending Tabor Reserve Account			7,970.50						
Post Plan Contingency Fund			192,000.00						
<b>Total Plan Operation Costs</b>			<b>576,109.51</b>						
<b>Total Proposed Expenditures</b>			<b>749,409.51</b>						

APPENDIX G  
TO  
THE PLAN OF WATER MANAGEMENT  
FOR  
THE GROUND WATER MANAGEMENT SUBDISTRICT OF THE  
TRINCHERA WATER CONSERVANCY DISTRICT

**Operational Timelines**

Estimated Beginning Date	Estimated Completion Date	Task
January 1	April 1	Renew Forbearance Agreements and Obtain Additional Replacement Supplies as Needed.
January 1	April 1	Renew Agreements between the Subdistrict and the Division Engineer to Administer Water to be made Available to Replace Stream Depletions.
January 1	April 1	Renew Agreements between the Subdistrict and Ditch and Reservoir Companies that will Provide Water and/or Storage Space to the Subdistrict.
January 1	January 15	Update and Print Farm Unit Reports. Send Out Farm Unit Reports on January 15.
February 1	February 1	Deadline is February 1st for Farm Units to Provide to the Subdistrict any Changes to Farm Unit Lands, Wells, Surface Water and Operations for the Current Year.
February 1	March 1	Update Database with Current Farm Unit Information. Update List of All Active Subdistrict Wells.
February 1	March 1	Obtain Updated County Assessor's Records containing Land Ownership and Parcel Identifications.
February 1	March 1	Obtain and/or Renew Contracts from Municipalities and Commercial Well Users.
February 15	March 1	Well TFM Records and Ditch Diversion Records for the Previous Year are Available from the DWR on February 15 to Download and Update in Database.
February 1	March 1	Write Draft Annual Report for Previous Year's Annual Replacement Plan. Preliminary Annual Report on Operation of Previous Year's Annual Replacement Plan Due to DWR on March 1.
February 1	March 1	Update the Sustainability Plan Metric.
March 1	March 15	Subdistrict Sets the Ground Water CU Allocation for the Current Year and Farm Units are provided with their Base CU Allocation Offer and an Estimated Farm Unit Fee Schedule.
March 15	April 1	Each Farm Unit's Statement of Disclaimed CU Allocations is due to the Subdistrict on April 1.
March 1	April 1	Obtain April 1 <sup>st</sup> NRCS Forecast of the April through September Flows of All Forecasted Streams in Division 3.
March 1	April 1	Obtain Division Engineer's April 1 <sup>st</sup> Estimate of Annual Flows for the Rio Grande, Conejos River, and Trinchera Creek.
March 1	April 1	Estimate Current Year Pumping and Ground Water Consumptive Use by Subdistrict Wells based on Anticipated Hydrologic Conditions, Historic Well Meter Records and Other Reasonable Methods.
April 1	April 15	Update Trinchera Response Function Worksheet to Estimate Stream Depletions for the Current Year.
April 1	April 15	Subdistrict Reallocates Disclaimed CU as a Special Irrigation CU Allocation and Notifies Farm Units.
April 1	April 15	Request for Approval of Proposed Current Year Annual Replacement Plan is due to DWR on April 15.

APPENDIX G  
TO  
THE PLAN OF WATER MANAGEMENT  
FOR  
THE GROUND WATER MANAGEMENT SUBDISTRICT OF THE  
TRINCHERA WATER CONSERVANCY DISTRICT

**Operational Timelines**

Estimated Beginning Date	Estimated Completion Date	Task
April 1	November 30	The Monthly Depletions by Stream Reach as Calculated by the Trinchera Response Function will be Replaced Daily in a Manner that Prevents Injury, unless the Owner of the Injured Vested Water Right has Either Waived any Claim of Injury, or Agreed to Accept Compensation for the Injury in a Form other than Water. Injury shall be Mitigated by the Use of: Direct Flow Replacement Water, Forbearance Agreements, and the Release of Water Stored in Reservoir.
April 2	August 20	Farm Units may Relinquish CU Allocations to the Transfer Pool or Purchase Additional CU Allocations from the Transfer Pool.
May 1	May 1	Anticipated Approval of Current Year Annual Replacement Plan by the DWR by May 1 (covering the period from May 1 of Current Year to April 30 of Next Year).
June 1	July 1	Finalize Previous Year's Annual Replacement Plan. Final Annual Report for the Previous Year's Annual Replacement Plan Due to the DWR on July 1.
June 1	August 1	On or Before August 1 of the Plan Year, the Subdistrict Board of Managers shall Prepare and Make Available a Preliminary Draft of the Proposed Budget with all Available Information Describing or Justifying the Expenditures and Revenues Contemplated and the Specific Fees or Assessments or Other Charges for Operation of the Subdistrict During the Next Year.
August 1	September 15	On or Before September 15 of each Plan Year, the Subdistrict Board of Managers will Adopt a Detailed Final Budget, utilizing the Previously Prepared Preliminary Budget, Concerning the Implementation of the Plan during the Next Year.
September 15	October 1	Update Actual Farm Unit Total Ground Water CU Allocation based upon: Base CU Allocation, CU Allocation Disclaimed, Special CU Allocation, CU Allocation Sold to Transfer Pool, Cu Allocation Purchased from Transfer Pool and Contract CU Allocation.
September 15	October 1	Land Owner Fee Schedule is due to Costilla County and Alamosa County on October 1 for inclusion on Next Year's Property Taxes.
November 15	November 15	Expected County Payment to the Subdistrict from Prior Year's Tax Assessment.
November 1	March 1	After the End of the Irrigation Season, and prior to the Submission of Next Year's Annual Replacement Plan, the Subdistrict will Recalculate the Stream Depletions caused by Subdistrict Well Pumping in the Plan Year using Actual Water Use Data and the Appropriate Response Function to Determine the Adequacy of Replacement Operations during the Plan Year. The Subdistrict will Submit a Report to the Division Engineer. If the Amount of Replacement Water Provided by the Subdistrict was Not Sufficient to Replace the Injurious Stream Depletions during the Plan Year, then Prior to the Commencement of Next Year's Irrigation Season, the Subdistrict will Deliver to the Appropriate Stream the Amount of Unreplaced Injurious Stream Depletions from the Prior Plan Year and the Division Engineer will Administer that Water to the Stateline as a Compact Delivery for the Respective Stream System.

**GRANTED**

Movant shall serve copies of this ORDER on any pro se parties, pursuant to CRCP 5, and file a certificate of service with the Court within 10 days.

<input type="checkbox"/> County Court		<input checked="" type="checkbox"/> District Court
COSTILLA COUNTY		
Court Address:	P.O. Box 301 San Luis, Colorado 81152	
IN THE MATTER OF THE ORGANIZATION OF THE GROUNDWATER MANAGEMENT SUBDISTRICT OF THE TRINCHERA WATER CONSERVANCY DISTRICT		
		<b>▲ COURT USE ONLY ▲</b>  Case Number: 2007 CV 66  Division:                      Courtroom:
ORDER AND DECREE ESTABLISHING GROUNDWATER MANAGEMENT SUBDISTRICT OF THE TRINCHERA WATER CONSERVANCY DISTRICT		

THIS MATTER came before the Court on the 9<sup>th</sup> day of May, 2008, pursuant to a Petition for the Organization of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District. The Petitioner appeared through its Secretary Jane Devine and its attorney Erich Schwiesow. The Court received evidence and listened to the arguments of counsel. The court hereby FINDS and CONCLUDES:

1. No protest to the organization of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District has been filed.
2. This Court has jurisdiction over the organization of the Subdistrict, which is situated wholly within Costilla County, Colorado, pursuant to the provisions of C.R.S. § 37-45-108.
3. The total assessed value is \$428,087.00.
4. All other statements of the Petition are true.
5. The Petition has been signed and presented in conformity with the provisions of Title 37 Article 45.
6. Based on the comparison of the list of signatories of the Petition to the list of owners of irrigated land in the proposed Subdistrict prepared pursuant to the provisions of C.R.S. § 37-45-112, more than 50% of the owners of irrigated land to be included within the District have petitioned this Court for its organization as required by C.R.S. § 37-45-109(2).
7. Based on the testimony of Petitioner's witnesses, the landowners supporting organization own more than 50% of the irrigated land in the proposed Subdistrict and more than 50% of the aggregate valuation for assessment of the land in the proposed Subdistrict.

8. As a result, and in accordance with C.R.S. §§ 37-45-120 and 37-45-112(7), this Court decrees that the Groundwater Management Subdistrict of the Trinchera Water Conservancy District is hereby organized and shall be known as the Groundwater Management Subdistrict of the Trinchera Water Conservancy District. The office and principal place of business of the Subdistrict shall be located jointly with the Trinchera Water Conservancy District in Blanca, Colorado.

9. The Subdistrict shall consist of all irrigated lands within the boundaries of the Trinchera Water Conservancy District described as follows:

ALL OF COSTILLA COUNTY LOCATED NORTH OF THE FOLLOWING LINE:  
Beginning at the point of intersection of the Rio Grande River and the South line of Section 11 in Township 32 South, Range 75 West of the 6<sup>th</sup> Principal Meridian; thence East to the Southwest corner of Section 12 in Township 32 South, Range 71 West of the 6<sup>th</sup> Principal Meridian; thence North to the Northwest corner of Section 12; thence East to the Southwest corner of Section 2, Township 32 South, Range 70 West of the 6<sup>th</sup> Principal Meridian; thence Northeasterly along the top ridge dividing the TRINCHERA DRAINAGE BASIN and the CULEBRA DRAINAGE BASIN to TRINCHERA PEAK.

In particular, the Subdistrict shall consist of the lands described on the attached Schedule A.

10. Pursuant to the request of the Petition and the provision of C.R.S. §§ 37-45-120 and 37-45-122(2)(a)(I), the Subdistrict's initial mill levy is set at 1.5 mills.

11. The Clerk of the Court shall transmit to the Division of Local Government in the Department of Local Affairs and to the County Clerk and Recorder of Costilla County, copies of this Order and Decree incorporating the Subdistrict.

DONE AND SIGNED this \_\_\_\_\_ day of \_\_\_\_\_, 2008.

BY THE COURT:

---

Pattie P. Swift, District Court Judge

RESOLUTION OF THE BOARD OF DIRECTORS OF  
THE GROUNDWATER MANAGEMENT SUBDISTRICT OF  
THE TRINCHERA WATER CONSERVANCY DISTRICT  
ADOPTING AND DIRECTING SUBMISSION OF A GROUNDWATER  
MANAGEMENT PLAN TO THE STATE ENGINEER

WHEREAS, The Groundwater Management Subdistrict of the Trinchera Water Conservancy District (the “Subdistrict”) is a quasi-municipal corporation and political subdivision of the State of Colorado organized and existing as a subdistrict of a water conservancy district pursuant to § 37-45-101, *et. seq.* C.R.S; and

WHEREAS, The Subdistrict was formed pursuant to § 37-45-120, C.R.S. and pursuant to § 37-92-501(4)(c), C.R.S., is authorized under Colorado law to develop, submit for approval and, if approved, implement a groundwater management plan in Water Division 3, consistent with the Rules Governing the Withdrawal of Groundwater in Water Division 3 (the Rio Grande Basin) and Establishing Criteria for the Beginning and End of the Irrigation Season in Water Division 3 for all Irrigation Water Rights (the “Rules”); and

WHEREAS, The Subdistrict has prepared a Groundwater Management Plan that meets the requirements of §§ 37-92-501(4)(a) and (b), C.R.S., and the applicable provisions of the Rules (the “Groundwater Management Plan”); and

WHEREAS, a Groundwater Management Plan must be approved by the State Engineer by March 15, 2020 for non-exempt wells within the Subdistrict to remain in compliance with the Rules;

WHEREAS, at its February 26, 2020 meeting, the Board of Directors of the Subdistrict has reviewed and approved a final version of the Groundwater Management Plan prepared by the Subdistrict’s attorneys and consulting engineers; and

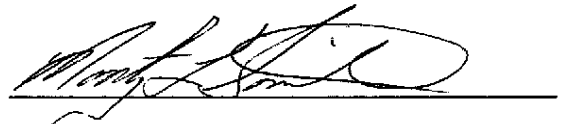

WHEREAS, It is the desire of the Subdistrict to establish and timely submit the Groundwater Management Plan for approval by the State Engineer.

NOW, THEREFORE, BE IT RESOLVED, by the Board of Directors of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District:

1. **Adoption of Groundwater Management Plan.** The Groundwater Management Plan, and Exhibits A through G thereto, a copy of which is appended to this Resolution, is hereby adopted by the Subdistrict and will be implemented by the Board of Directors in accordance with its terms, or as such terms may be modified by the State Engineer or reviewing court on approval of the Groundwater Management Plan.

**Direction for Submission of the Groundwater Management Plan.** The attorneys for the Subdistrict are hereby directed to submit the Groundwater Management Plan appended to this Resolution to the State Engineer in compliance with the Rules as the official Groundwater Management Plan of the Subdistrict. ,

Dated this 27<sup>th</sup> day of February, 2020

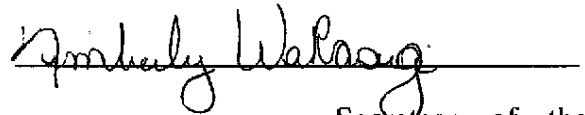

**Monty Smith**, President of the  
Groundwater Management Subdistrict of  
the Trinchera Water Conservancy District

Certificate

I, Kimberly Wahsug, do certify that the above is the true and correct copy of the Resolution approved by the Board of Directors of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District on the 26<sup>th</sup> day of February, 2020.

(SEAL)

\_\_\_\_\_, Secretary of the  
Groundwater Management Subdistrict of  
the Trinchera Water Conservancy District

**GRANTED**

Movant shall serve copies of this ORDER on any pro se parties, pursuant to CRCP 5, and file a certificate of service with the Court within 10 days.

NOTICE OF HEARING ON PETITION FOR ORGANIZATION OF THE GROUNDWATER MANAGEMENT SUBDISTRICT OF THE TRINCHERA WATER CONSERVANCY DISTRICT			

**Pattie P. Swift**  
FILED Document  
DATE FILED: Feb 28 2008 4:00 PM  
COSTILLA COUNTY DISTRICT COURT 12th ID  
CASE NUMBER: 2007 CV 66  
Filing Date: Feb 28 2008 4:00PM MST  
Filing ID: 18796691  
Review Clerk: Bernadette Lucero

TO: ALL PERSONS INTERESTED:

Public notice is hereby given:

1. That on the 28<sup>th</sup> day of December 2007, pursuant to the provisions of the Water Conservancy Act of Colorado, there was filed in the office of the Clerk of the District Court for Costilla County, Colorado the Petition of the Trinchera Water Conservancy District for the establishment of a groundwater management subdistrict to be known as the Groundwater Management Subdistrict of the Trinchera Water Conservancy District. The purposes of the proposed subdistrict are as set out in the Petition and include the conservation and stabilization of the water supply and groundwater storage in the aquifer underlying the boundaries of the subdistrict for existing irrigation, domestic, municipal, power, manufacturing and other beneficial uses. In particular, the primary improvement of the subdistrict shall be to adopt and administer a groundwater management plan as an alternative to state imposed regulations that limit the use of wells within the subdistrict by allowing subdistrict members to self regulate water consumption with economic based incentives promoting responsible water use and management. The plan will be designed to meet the requirements of C.R.S. § 37-92-501(4) to allow for exemption from any curtailment of underground water withdrawals within the boundaries of the subdistrict that may be pursued by the State Engineer.

2. That the land sought to be included in said subdistrict comprises lands in Costilla County, Colorado described as follows:

The Subdistrict will be located entirely within the boundaries of the Trinchera Water Conservancy District, and will include, and be limited to, all irrigated agricultural property included within the boundaries of the Trinchera Water Conservancy District, which includes ALL OF COSTILLA COUNTY LOCATED NORTH OF THE FOLLOWING LINE: Beginning at the point of intersection of the Rio Grande River and the South line of Section 11 in Township 32 South, Range 75 West of the 6<sup>th</sup> Principal Meridian; thence East to the Southwest corner of Section 12 in Township 32 South,

Range 71 West of the 6<sup>th</sup> Principal Meridian; thence North to the Northwest corner of Section 12; thence East to the Southwest corner of Section 2, Township 32 South, Range 70 West of the 6<sup>th</sup> Principal Meridian; thence Northeasterly along the top ridge dividing the TRINCHERA DRAINAGE BASIN and the CULEBRA DRAINAGE BASIN to TRINCHERA PEAK.

3. That at the hearing on February 28, 2008, the public hearing on said Petition was continued to and will be had in the Costilla County Court on the 9<sup>th</sup> day of May, 2008, at the hour of 9:00 a.m. by the District Court sitting in and for Costilla County at the Courthouse in the City of San Luis, Costilla County, Colorado 401 Church Place, San Luis, Colorado 81152. All persons and public corporations owning or interested in real estate within the territory above described will be given the opportunity to be heard at the time and place above specified.

4. Notice is further given that pursuant to the provisions of C.R.S. § 37-45-112, Petitions protesting the creation of said subdistrict may be filed in the office of the Costilla County District Court at least thirty days prior to the time fixed by Order for hearing, and not thereafter. Likewise, the owner of any real property within the proposed subdistrict may file a Petition with the Court stating reasons why said property should not be included therein and praying that said property be excluded. Such Petition shall follow the requirements of C.R.S. § 37-45-112(6)(b) and shall be filed thirty days prior to the date fixed for the hearing.

DONE AND SIGNED this \_\_\_\_\_ day of \_\_\_\_\_, 2008.

**RESOLUTION OF THE BOARD OF DIRECTORS OF  
THE GROUNDWATER MANAGEMENT SUBDISTRICT OF  
THE TRINCHERA WATER CONSERVANCY DISTRICT  
ESTABLISHING A SUBDISTRICT WATER ACTIVITY ENTERPRISE**

WHEREAS, The Groundwater Management Subdistrict of the Trinchera Water Conservancy District (the "Subdistrict") is a quasi-municipal corporation and political subdivision of the State of Colorado organized and existing as a subdistrict of a water conservancy district pursuant to § 37-45-101, *et. seq.* C.R.S., and is authorized and empowered thereby to furnish water to lands within its boundaries; and

WHEREAS, The Subdistrict was formed pursuant to § 37-45-120, C.R.S. and therefore pursuant to § 37-92-501(4)(c), C.R.S., is authorized under Colorado law to develop, submit for approval and, if approved, implement a groundwater management plan in Water Division 3, consistent with the Rules Governing the Withdrawal of Groundwater in Water Division 3 (the Rio Grande Basin) and Establishing Criteria for the Beginning and End of the Irrigation Season in Water Division 3 for all Irrigation Water Rights (the "Rules"); and

WHEREAS, The Subdistrict intends to implement a groundwater management plan that meets the requirements of §§ 37-92-501(4)(a) and (b), C.R.S., and the applicable provisions of the Rules (the "Groundwater Management Plan"); and

WHEREAS, The Subdistrict has determined that it will be necessary to acquire water, water rights, property, easements, agreements and facilities, including but not limited to storage structures, canals or pipelines, augmentation and recharge structures, monitoring wells, augmentation wells, and to enter into forbearance, fallowing or other agreements in order to implement the Groundwater Management Plan, which will require replacement of injurious groundwater depletions caused by pumping of member wells included within the Groundwater Management Plan, including any ongoing or delayed depletions attributable to member wells should the Subdistrict or its Groundwater Management Plan cease to exist or operate, and that the Subdistrict meet sustainability requirements of the Groundwater Management Plan and the Rules with respect to the aquifer(s) within the Subdistrict; and

WHEREAS, It is the desire of the Subdistrict to establish a subdistrict water activity enterprise pursuant to § 37-45.1-101, *et. seq.*, C.R.S., in order to implement those operations which the Subdistrict determines should be operated as a water activity enterprise in support of and to facilitate the development and operation of the Groundwater Management Plan.

NOW, THEREFORE, BE IT RESOLVED, by the Board of Directors of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District:

1. **Establishment.** There is hereby established, pursuant to the terms and provisions of the water activity enterprise statute, Title 37, Article 45.1, C.R.S., a subdistrict water activity enterprise to be known as the *Trinchera Groundwater Management Subdistrict Water Activity Enterprise* (hereinafter, the "Enterprise"), which is an instrumentality and wholly owned by the Subdistrict, which consists of the separate business entity that may be used by the Subdistrict for the purposes of developing, financing, and managing those assets, facilities and arrangements necessary for approval and operation of the Groundwater Management Plan, including but not limited to water projects or facilities and the acquisition of water; including the purchase and lease of water, water rights, municipal effluent and water projects, and the acquisition, construction, operation, maintenance, repair and replacement of water facilities (such water facilities include but are not limited to storage structures, canals or pipelines, augmentation and recharge structures, monitoring wells, and augmentation wells), the acquisition of land or easements associated with or necessary for water facilities, and the acquisition of forbearance, fallowing or other agreements in order to replace depletions attributable to wells and structures included within the Groundwater Management Plan, to the extent required by law, and to satisfy the sustainability requirements of the Rules and the Groundwater Management Plan. The assets of the Enterprise may include, without limitation, the following assets associated with and reasonably necessary to the achievement of said undertakings: water leases, water rights and interests of real and personal property and water facilities hereafter acquired, the revenue streams generated by Subdistrict Class B, C and/or D Assessments for reimbursement of or payment for Enterprise services, and fees collected directly from and/or fines imposed on owners of wells or structures operating pursuant to the Groundwater Management Plan. Further, the Subdistrict may grant to the Enterprise funds from the general mill levy of the Subdistrict, so long as not more than ten percent (10%) or more of the Enterprise's annual revenue is received as grants from all Colorado state and local governments combined. The Enterprise shall have

all the authority, powers, rights, immunities, obligations, and duties as may be provided or permitted by the Water Activity Enterprise statute, Article 45 of Title 37, C.R.S. for a water conservancy district, the Governmental Immunity Act, § 24-10-101, *et. seq.*, C.R.S., and the Colorado Constitution, and as may be further prescribed from time to time by resolution of the Board of Directors, including without limitation the ability to borrow and commit to the repayment of funds from a public or private entity. , Nothing in this resolution shall be deemed to limit the Subdistrict's right, power or authority, acting without the Enterprise, to engage in any undertakings with its own resources either in support of the Groundwater Management Plan or for any other lawful activity. There is also hereby established the Trinchera Groundwater Management Subdistrict Water Activity Enterprise Fund, for purposes of accounting for the revenues, expenditures, and obligations of the Enterprise.

2. **Governing Body.** The members of the Board of Directors of the Subdistrict shall act as the governing body of the Enterprise. The said governing body shall be subject to all applicable laws, bylaws, rules and regulations pertaining to the Subdistrict Board of Directors. It shall not be necessary for the governing body of the Enterprise to meet separately from regular and special meetings of the Subdistrict's Board of Directors. However, when acting on behalf of the Enterprise, the governing body shall specifically announce or acknowledge the actions thereby taken by the governing body of the Enterprise and its actions as the governing body of the Enterprise shall be those of the Subdistrict acting through the Enterprise. The governing body may conduct its affairs in the same manner and subject to the same laws which apply to the Subdistrict's Board of Directors for the same or similar matters. Except as specifically stated in or for any particular act or determination, the act or determination of the Subdistrict's Board of Directors shall not be deemed to be the act or determination of the governing body of the Enterprise.

3. **Obligations.** Pursuant to § 37-45.1-104, C.R.S., the Enterprise may issue or reissue revenue bonds, notes, or other obligations payable from the revenues derived or to be derived from the function, service, benefits, or facility or the combined functions, services, benefits, or facilities of the Enterprise or from any other available funds of the Enterprise.

4. **Maintenance of Enterprise Status.** The Enterprise shall at all times and in all ways conduct its affairs so as to continue to qualify as a water activity enterprise within the meaning of § 37-45.1-102, C.R.S. and as an enterprise within the meaning of Article X, Section 20 of the Colorado Constitution. Specifically, but not by way of limitation, the enterprise is not authorized to, and shall not, impose taxes of any kind or receive ten percent (10%) or more of its annual revenue in grants from all Colorado state and local governments combined. "Grant" shall be defined as set forth at C.R.S. § 37-45.1-102(2). All the costs, liabilities, accounting, assessments, obligations and indebtedness of the Enterprise shall be kept and maintained as separately identifiable matters from Subdistrict funds and obligations.

Dated this 2<sup>nd</sup> day of March, 2017

**Monty Smith**, President of the  
Groundwater Management Subdistrict of  
the Trinchera Water Conservancy District

#### Certificate

I, \_\_\_\_\_, do certify that the above is the true and correct copy of the Resolution adopted by the Board of Directors of the Groundwater Management Subdistrict of the Trinchera Water Conservancy District on the 2nd day of March, 2017.

(SEAL)

**Byron Kunugi**, Secretary/Treasurer of the  
Groundwater Management Subdistrict of  
the Trinchera Water Conservancy District
