
Application for the System Conservation Pilot Program (SCPP) (2023)

**Please send the completed application to your state contact
and to the Upper Colorado River Commission (UCRC):**

For Colorado: Amy Ostdiek, amy.ostdiek@state.co.us

For New Mexico: Ali Effati, ali.effati@ose.nm.gov

For Utah: Lily Bosworth, lbosworth@utah.gov

For Wyoming: Jeff Cowley, jeff.cowley@wyo.gov

**For UCRC: Sara Larsen,
scpp@ucrcommission.com**

Project applicants should anticipate working with their state counterparts to complete portions of this application, including the development of project location/spatial information and other verification procedures. For questions, please reach out to your state contact above, and/or UCRC.

Proposed System Conservation Pilot Program Project Description Summary (if needed, provide details on additional sheets attached to this application)

Water user has historically used water rights to irrigate for the purpose of growing grass hay and alfalfa for sale and leased pasture, on lands in ██████████. During the conservation pilot program, fields that would have normally received a full supply of irrigation water will be fallowed to conserve system water. The fields will not be irrigated during the normal irrigation season from April 15th to September 20th 2023. Water user will continue to make normal water diversions and water deliveries to other farmlands under his control. Water user will also conduct grazing and other farm operations on all farmland under his control. Please note, water user normally begins farming in early April and will have to decline participation if not notified of application acceptance before then.

Project Location

(Provide a narrative description of the potential project location. Include project address, if applicable, T&R Sections, lat/long for general project location, or attach a map with a project area/boundary)

[Redacted]

[Redacted]

Description of Current Water Use

(Provide a narrative description of the current water use, including the place of use (attach a map of project are/boundary, if applicable)

Water user owns farmlands in both red and yellow boundaries. Yellow boundary fields are selected to participate in the system conservation program irrigated with 8" gated

pipe. Water user will continue to irrigate red field during the 2023 irrigation season with installed center pivot sprinklers.

Water Right Information

(Provide the identification information and a description of the water right(s) being utilized by the project. Include permit number, facility (ditch) name, priority date, and (if adjudicated) Certificate No. and share numbers.)

[Redacted text block containing multiple lines of blacked-out information, likely water right details.]

Diversion Point(s) and Measurement Device(s)

(Provide a narrative description of the location of the point(s) of diversion and identify any existing measurement devices (attach a map with project points of diversion preferred))

[REDACTED]

Estimated Amount of Water Conservation Per Year or Over the Life of the Proposed Project (Acre-feet)

(Provide supporting information or methodology for estimating water conservation volumes in acre-feet)

Estimate of water conservation volumes was calculated by Wilson Water Group, eemetric from 2017-2022.

Project Type: Full Season Fallow
Acres = 125.1

[REDACTED]
Estimated Water Conserved = 274 ac-ft

[Redacted text block]

Additional Information

(Include any additional information that would be helpful in understanding your proposal.)
