1.Reduce potable water irrigation. Priority 1 project potable water savings target is 1.5 million gallons/yr reduction. More defined targets for other sites will be developed in design process.

2.Demonstrate environmental stewardship and leadership at County facilities by planning and implementing water-conserving landscape design. Promote the Priority 1 project within the community as a large-area turf conversion and as a water conservation project through signage, newsletter postings, and through project partners or supporting organizations (such as Denver Water Public Affairs and City of Littleton). Promote Priority 2 projects as they are developed through similar communication means to further demonstrate leadership in water conservation.

3.Provide each site included in this request with the flow meters, tie-ins to smart controllers and alarms to allow for real-time monitoring and modification of irrigation to ensure measurement and verification of savings generated.
