Re: Pastorius Reservoir Headgate Replacement – WSRF Grant – POGG1 2024-2481

Progress report

The Rubicon Headgate at Pastorius Reservoir was installed Oct. 8 through Oct. 10th. The old radial headgate was removed and concrete power washed about a week before installation to leave plenty of time for the concrete to dry before installation. Rubicon personnel arrived on Oct. 8th and began installation by anchoring the channel/bracket that the gate slides into. Oct. 9th FCDC removed fencing and assisted Rubicon with installation of the headgate. The tin roofing on the nearby shed had to be removed so the gate would be able to slide vertically down into the channel/bracket. The gate was then commissioned and platforms installed. The fencing and the shed roofing were then reinstalled. Oct 10th the sandbags keeping approximately 10" of water from coming to the gate were uninstalled. The project was then complete.

Thank you,

Jason T Cole
