Re: WSRF Grant Contract – POGG1, PDAA, 202300003954 – Beaver Park Water Inc. Upper canal Automated Diversion Headgate project – Final Report December 14, 2023- May 29, 2024

Dear Mr. Wade,

The purpose of this letter report is to provide the Colorado Water Conservation Board (CWCB) with the final Report for Beaver Park Water Inc.'s Upper Canal Automated Diversion Headgate Project.

The Final Project Task

Fabrication and safety railing has been completed at the diversion structure. A trash rack was also included in effort to protect the gate from debris that would prevent the gate from closing. The planned concrete wall, to protect the equipment has yet to be completed due time restrictions and limited labor availability. Beaver Park Water has the funds to support the completion and anticipate completion this fall.

Conclusion

The principal objective of this project has been accomplished with the installation of a new automated headgate on Beaver Park's Beaver Creek diversion structure. The new headgate is fully functional with minimal disruption of raw water deliveries to Penrose Water District and minimal loss of storage deliveries to Brush Hollow Reservoir.

Sincerely,

Dawn Daniels
Office Administrator
