GENERAL INSPECTION TOPICS

This list identifies the environmental and permit parameters inspected and gives a categorical evaluation of each. No problems or possible violations were noted during the inspection. The mine operation was found to be in full compliance with Mineral Rules and Regulations of the Colorado Mined Land Reclamation Board for the Extraction of Construction Materials and/or for Hard Rock, Metal and Designated Mining Operations. Any person engaged in any mining operation shall notify the office of any failure or imminent failure, as soon as reasonably practicable after such person has knowledge of such condition or of any impoundment, embankment, or slope that poses a reasonable potential for danger to any persons or property or to the environment; or any environmental protection facility designed to contain or control chemicals or waste which are acid or toxic-forming, as identified in the permit.

OBSERVATIONS

This inspection was conducted as part of the Division of Reclamation, Mining and Safety monitoring program.

The site is fully reclaimed, being adequately graded and seeded. The vegetation, however, has not become adequately established. The operator continues to make efforts to establish the proper vegetation for the reclaimed site. If the goal of the operator is to continue mining of the site at some point in the future, the site must be placed into Temporary Cessation. Please see Rule 1.13 of the Construction Materials Rules and Regulations for guidelines as to submitting a request for Temporary Cessation.

The financial warranty amount currently held by the Division is adequate for reclamation of the site. If mining activities are restarted, however, additional bond will be necessary.
