SUMMARY OF 2014 ACTIVITIES

Reclamation hydro-seeding was accomplished on a total of acres within the new mine (designated "Exhibit "C") during the year. There are no changes to the Former Mine A map (designated "Exhibit A") and included in the 2003 report, so it is not included with this year's submittal. There were also no changes to the Former Mine B map (designated "Exhibit "B") and included in the 2012 report, hydro-seeding was re-applied to one acre within this area due to poor results of germination from previous seeding.

Haul roads were treated with a "synthetic lig" dust suppressant during the year and road base material was also replaced on worn road areas of the roads.

Approximately 410,00 tons of gypsum rock were shipped from the mine during 2014.
