This permit site is in the process/stage of reclamation only for the remaining pit area. There is one small area near the entrance remaining to be mined, but that will only occur at the very end of the life of this site as an inert landfill. Amendment AM-4 was approved for this site in the beginning of 2010 allowing for the change in reclamation from a water-storage reservoir to complete backfilling with inert fill, other than a future 7-acre pond. Approximately 3 acres were backfilled during the report year.

No seeding or revegetation was implemented on this site during the report year, as the revised reclamation plan is to progressively backfill the site above the water-table first, then backfill further with a more mixed inert fill, before topsoiling and seeding.

Reclamation during the next reporting year will be as continued backfill in the southern and central area of the permit site.

Sufficiency of Value of Financial Warranty

The permittee holds a Financial Warranty for the permit through Great American Insurance Company in the full amount of \$678,169.00, a figure sufficient to achieve all reclamation requirements under the current permit.

A check in the amount of \$791.00 is being submitted with this report to cover the Annual Fee required to maintain this permit in good standing.
