DIVISION OF RECLAMATION
MINING AND SAFETY

RE: Mine ID#: M-1977-193: Onsite Temporary Fuel Storage.

Tim,

We recently purchased a 15,000 gallon, double wall, fuel storage tank which is self-contained, to include dispensing equipment (see attached photos). The attached photos depict the tank on a flatbed trailer, still in transport mode. Our current, short term plan is to have the tank pressure checked and certified and then place tank in a temporary location at our Canon City quarry, and use it for off-road diesel fuel storage while in preparation for the long term plan.

The long term plan would be to construct a permanent fuel storage and dispensing facility which would consist of the one (1) 15K gallon tank (described above) as well as, one (1) 7.5K – 10K gallon double wall on-road diesel tank , one (1) 500 – 1,000 gallon double wall unleaded tank and provisions for a 1,000 gallon waste oil storage tank. This facility would be constructed using engineered concrete structures & slabs, proper safety curbs and/or bollards, etc.... anticipated completion, end of first quarter 2017.

The questions I'm proposing to the Division are as follows; (1) What, if any, do we need to do from the Divisions stand point, to allow us to utilize the recently purchased tank in a temporary state as explained above? (2) With the long term plan in mind, can we submit the addition of the fuel storage facility under a Technical Revision once we have a drawing of the facility with the engineered values and we are ready to begin construction? (3) Does the Division have any special requirements that we need to be made aware of or take into consideration, regarding fuel storage or dispensing of fuel on the property?

I appreciate your time in addressing the questions proposed. Should you need any further information please don't hesitate to ask.

Best Regards,

Randy DiLuzio
