Michael Cunningham,

This memo is to formally request a 2 week extension to the review of the Stegner pit for Trollco at WaterValley in Windsor Colorado.

Coffey Engineering has recently been retained to assist the client in completing the required items that you have requested from them.

The client has made us aware that previous extensions have been granted...and that us requesting additional time is pushing the limit of patience. We want enough time to review the site, documents, and previous directives so that we can quickly produce a final product that will meet your expectations and bring the review to a close without additional comments and revisions. We look forward to working with you again, and are happy that Trollco has selected us to represent them in this effort going forward.

Please feel free to contact me directly with question or concerns that may arise.

Sincerely,

Michael Lang, P.L.S.**Vice President**
