Colorado Division of Reclamation, Mining and Safety
1313 Sherman St. Room 215
Denver, CO 80203

Mr. Eric Scott:

Mr. Scott,

Please find the attached reservoir, MW-1, MW-2 and MW-4 quarterly readings, in addition to Pit 29 South cell water levels.

MW-4 datalogger monitoring continues to verify the functionality of the French drain project, which was completed in 2015 along the southern boundary of the western half of the property. The surface of the southern neighbor's property continues to exhibit functionality of the French drain as well.

In addition, a formerly suggested relationship between the MW-4 and South Cell reservoir water levels continues to be disproven throughout this past quarter.

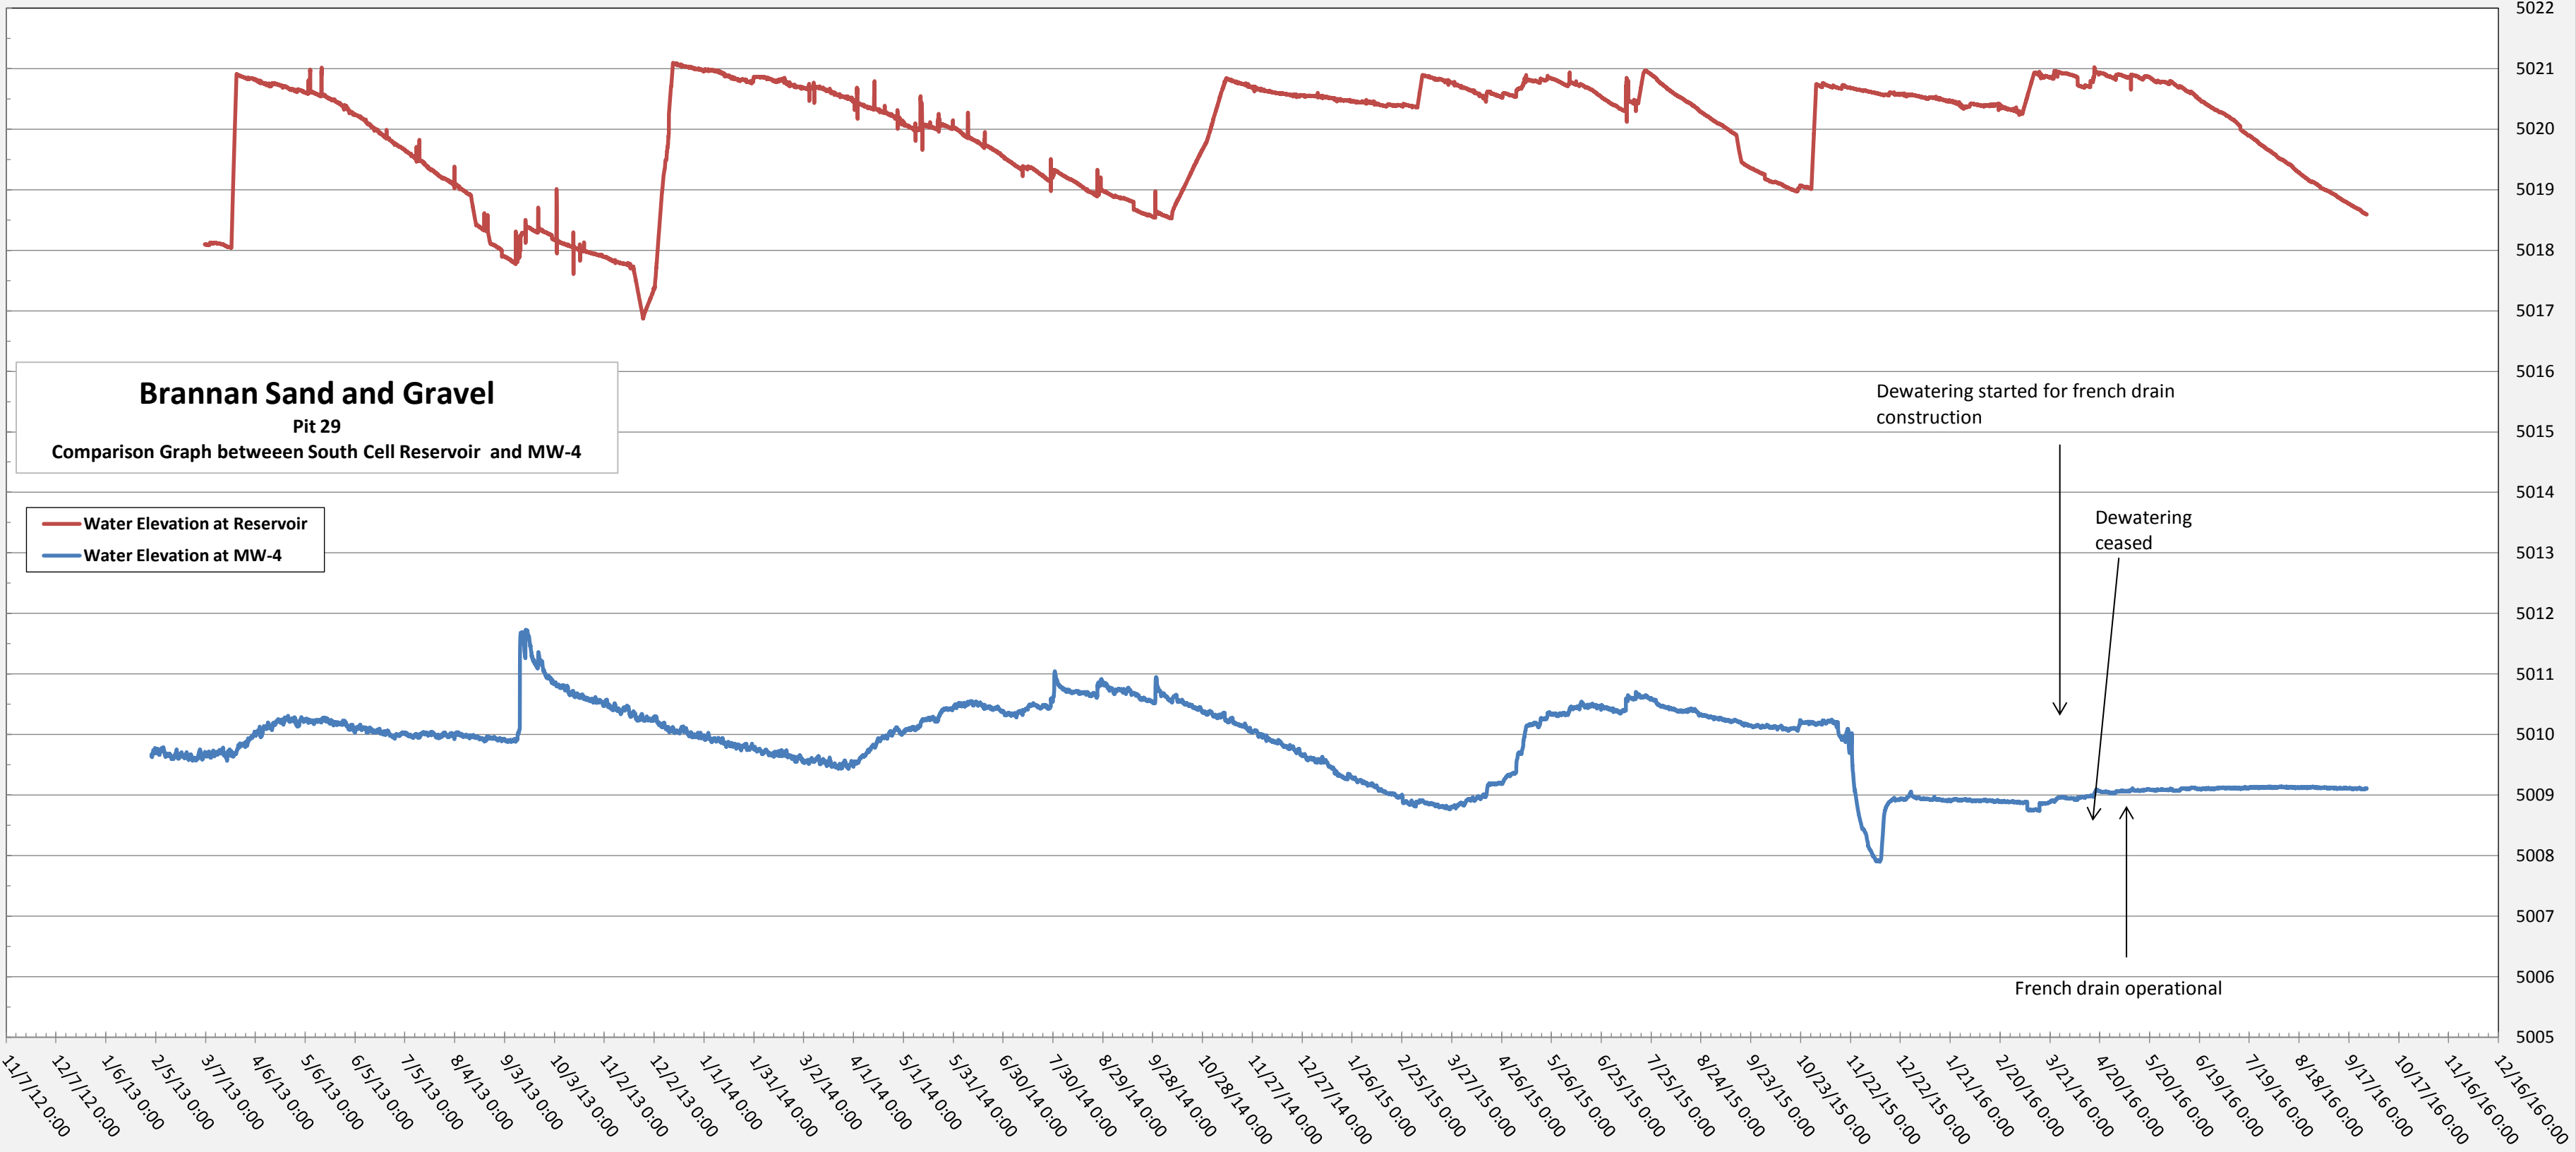

Piezometers MW-1 and MW-2 groundwater levels remain stable, and within 1.5 feet of the average, as determined by data collected since 2005. Piezometer MW-4 exhibits a stable groundwater level since installation of the French drain in December 2015.

Sincerely,

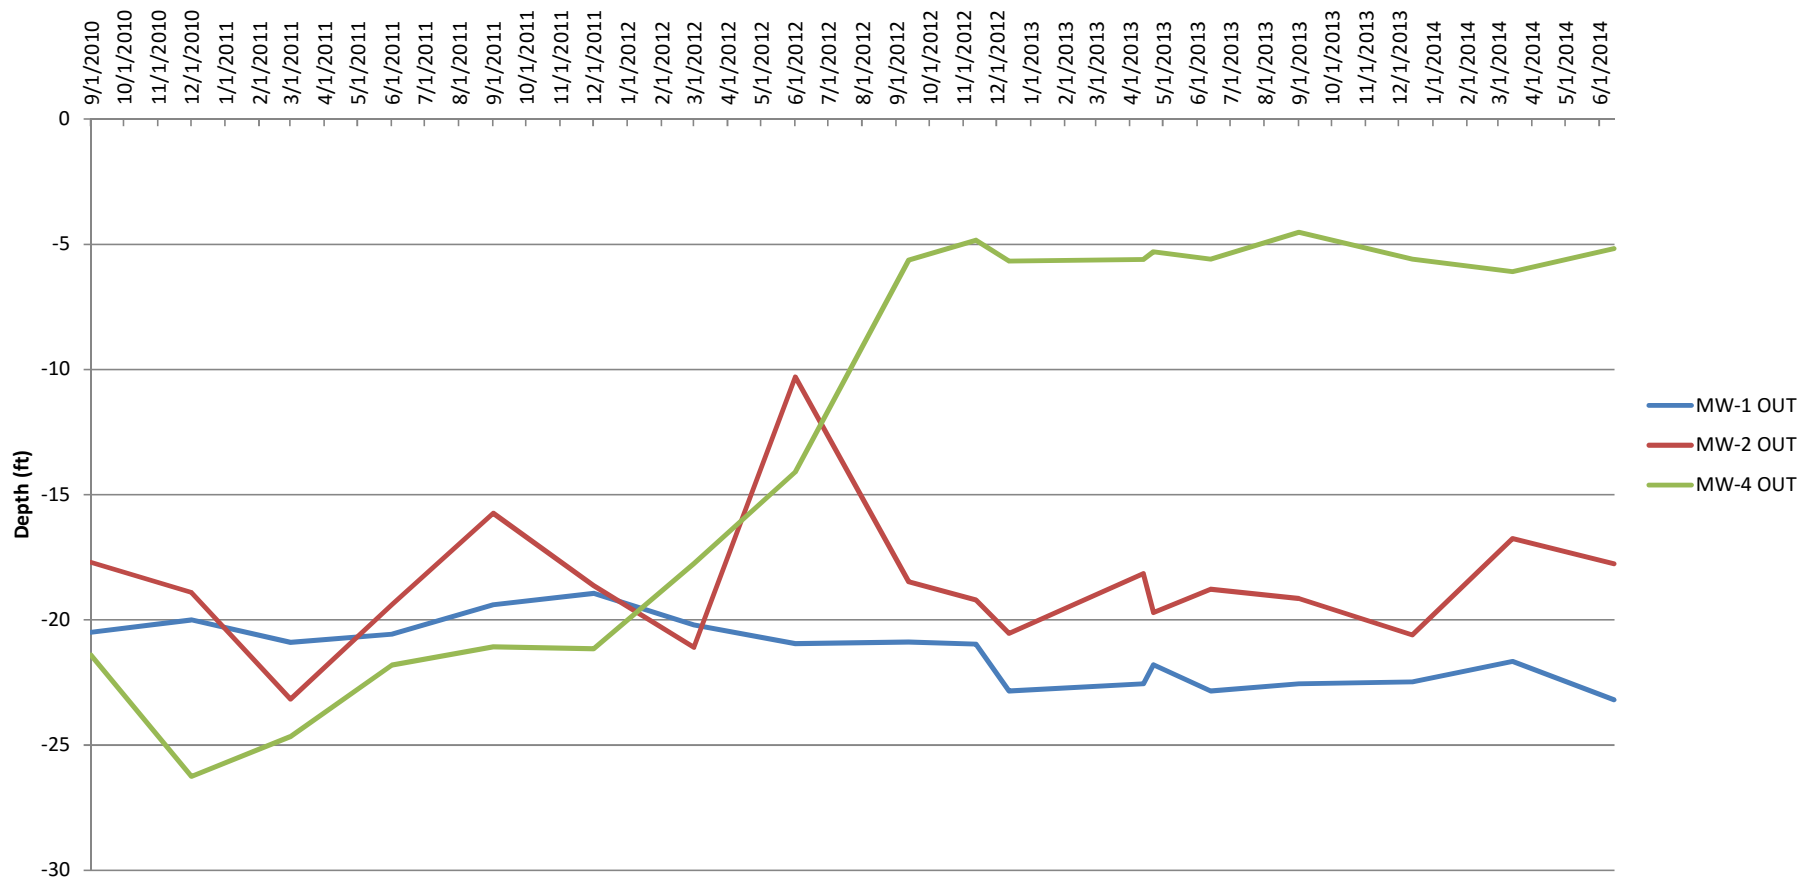

A handwritten signature in blue ink, appearing to read "Josh", followed by a long horizontal line.
