Mr. Cunningham,

High Speed Mining, LLC has not begun mining activities yet on its property referenced as M-1991-037. While removing the tracked feeder, the equipment broke down on the road on its way out. This caused a "traffic jam" in and out of the pit. The equipment was repaired by the manufacturer and removed. We believe the feeder was still within the permitted mine area once parked for repair.

As for all other equipment only television production equipment is up top and not subject to our mining permit. This includes office production trailers, self-power light packs, trailers, generators for television production, tents, parking for camera crews, filming rooms, UTV's, storage containers, skid steer and various other items.

Sincerely,
High Speed Mining LLC
