Dear Elliott,

The pictures I sent were taken south of the stock piles facing East.

You can locate the culvert, just south of the pit entrance traveling south on 36th In on the east side of the road. The one picture is facing north east you can see the tops of the stock piles.

These pictures show the new N/S and E/W burms.

I believe these were erected to controll storm water from entering the crushing area, since it is one of the lowest levels at the pit. Not for view blockage as you and I discussed last year.

The concern of the water and mud comming out of the front enterence onto the black top, is that it creates a slick surface on the road.

You enter that intersection comming south, off of a blind hill. You will see what I'm describing when you come for your inspection.

I will forward current photos by next week.

Thank you,
Wendi Kern

Hi Elliott,

I believe it would have been May 2017 it would have been about 4 to 6 pm.

Thank you Wendi, these photos will be added to your 2/14/18 complaint email and addressed during the upcoming site inspection. As these photos are not dated, do you recall when in 2017 this rain event occurred?

Please contact me if you have any questions.

Thank you
