

Notes:

3. We estimate we have 3 to 6 months of work left to complete reclamation once the landowner resolves his problems. A Technical Revision was filed on 3/19/18 to change the reclamation plan that allows the site to be reclaimed to as built conditions. The landowner has let a third party park equipment, store material and operate a sludge pit on a 1.18 acres area (Landowner Use Area) in the northeast corner of the Permit area (orange). Albert Frei and Sons, Inc. has no power to stop this activity.
5. Mine is in the reclamation phase.
9. Backfilling is complete on area. Some minor side sloping is left to be done.
16. There is no water exposed on the mine area.
