

SUPPLEMENTAL MATERIAL

FOR 2018 ANNUAL REPORT FOR LOBLOLLY PIT M2013-066

Prepared by Nathan Barton, 11 April 2018

BY QUESTION:

8. Originally estimated additional 4.0 acres would be disturbed but actually 3.0 acres were.
9. Although no acres have been completely reclaimed (hence report of 0.0), a total of 20.5 acres are at final grade, including 7.4 acres of ponds and roads, which do not require topsoil placement or seeding.

This is an increase of 0.4 acres from last report.

11. No change from previous year.
12. Planned placement of soil and seeding was not done in 2017 as planned, and is being done this spring. No areas (other than ponds) are suitable for requesting release at this time. No request for release is planned for 2018, but may be done during 2018-2019 reporting year if good winter precipitation is received.
13. Topsoil replacement will NOT done on roadways or in ponds or within 1 foot of pond high water mark. Other areas had 6 inches placed (estimated 13.1 acres).

Please note that the Administrator information (for ePermitting) is incorrect, as noted on 11 APR 18.
