RE: Specification Aggregates Quarry; DRMS File No. M-1974-004; Adequacy Review No. 1 (TR03)

Dear Ms. Mikulas,

The Division of Reclamation, Mining and Safety (Division) received Technical Revision No. 3 (TR03) for the above referenced operation on April 11, 2018. The decision date for this Technical Revision is May 11, 2018. The Division has reviewed the Technical Revision Application and has the following comments:

1. The Operator has indicated a leak test is being performed to verify whether the water in the quarry pit is groundwater or impounded surface water. Please commit to providing the Division the results of the leak test within 30 days after they are available. If the leak test shows the water in the quarry pit is impounded stormwater, then no further action will be required. Alternately, if the leak test shows the water in the pit is impounded groundwater, then the Division will require an appropriate permit revision to account for the exposure of groundwater.

This concludes the Division's adequacy review of this Technical Revision. Please remember that the decision date for this Technical Revision is May 11, 2018. If you are unable to provide satisfactory responses to any inadequacies prior to this date, it will be your responsibility to request an extension of time to allow for continued review of this Technical Revision. If there are still unresolved issues when the decision date arrives and no extension has been requested, the Technical Revision will be denied.

If you have any questions, please contact me at (303)866-3567 x8116.

Sincerely,

Michael A. Cunningham
Environmental Protection Specialist

CC: Wally Erickson, DRMS
