

The New Cache La Poudre Irrigating Company
Supplemental Information

This is not a commercial gravel pit. We have constructed an agricultural pond that is 9.13 acres in size (total disturbed area will be 16.2 acres, to include pond and embankment). The pond construction and lining were completed in 2016.

Currently, the site has been seeded and establishment of grass is continuing. The noxious weeds at the site are bindweed and Canadian Thistle. These weeds are being controlled by mowing and by pesticide application. The applicant owns mowers and spray equipment and part of the operations of the applicant is weed control at other sites. The site will be inspected regularly by staff and application of pesticide completed as needed to control weeds.
