Mon, Jul 2, 2018 at 5:01 PM

To: "Cazier - DNR, Tim" <tim.cazier@state.co.us>, Elliott Russell - DNR <elliott.russell@state.co.us>, "Eschberger - DNR, Amy" <amy.eschberger@state.co.us>

Cc: Meg Burt <Margaret.Burt@newmont.com>, Ronald Parratt <Ronald.Parratt@newmont.com>, Linda White <Linda.White@newmont.com>

Tim,

Attached are the daily LDS inspection forms from June 4 to July 2, 2018. Please note that the incorrect date was written on the form for 6/5/18 and 6/7/2018. The form completed by C. Chess with the date 6-7-18 was actually recorded on 6/8.

Below is a table summarizing the CN results for the VLF2 Pumpback Vault.

| Location | Date | WAD CN (mg/L) |
|----------------------|-----------|------------------|
| SGVLF Pumpback Vault | 5/29/2018 | <0.01 |
| SGVLF Pumpback Vault | 6/4/2018 | <0.01 |
| SGVLF Pumpback Vault | 6/13/2018 | <0.01 |
| SGVLF Pumpback Vault | 6/18/2018 | <0.01 |

As discussed last week, Total CN was identified in the VLF2 Underdrain sump with a maximum concentration of 0.013 mg/l (WAD CN were non-detect). While there is no regulatory limit identified with Total CN, CC&V requested additional analysis from the analytical laboratory to determine if a possible sulfide interference may exist, resulting in artificially high Total CN readings. SG-Vault samples collected on the 13th and 18th of June were split at the lab to determine if there is any sulfide interference, one split sample was treated for sulfides and the other was untreated. All samples were analyzed using EPA method 335.4. The results for the treated sample showed total CN as non-detect, with the untreated sample 0.01 mg/l.

7/3/2018

State.co.us Executive Branch Mail - VLF2 Data

While no flow has been observed or recorded in the VLF2 Underdrain, the standing water in the sump has been pumped back to VLF2. Any new flow or water in the sump will be recorded and DRMS will be notified.

Please let me know if you have any questions

Thank you,

Justin Bills
