Dustin, We have completed pushing up the top soil into a mounded distinct pile at the Upper Gold Links. The soil pushed up out of the pad and on top of the leveled pad of soil was approximately 500 tons on top of the existing reclamation soil. This pile of soil has been re-seeded and we have placed the sign on top of it stating it is reclamation top soil. This pile is in such a location and shaped so that it is clearly distinguished and can not be disturbed for any other purposes.

Again my apologize for this mistake and thank you,

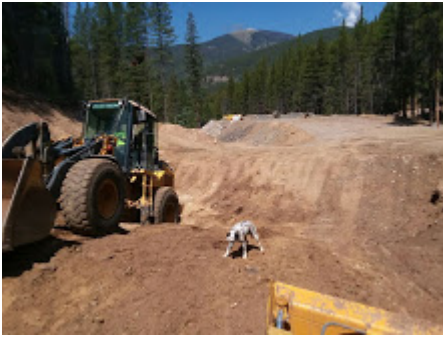

Jake
