

Notes:

9. Approximately 0.25 acres of floor was created this year and graded.
11. We continued to remove material from the 1.9 acres stripped area shown on the map (brown).
12. The mine floor is kept graded and no other reclamation is required at this time.
19. The current bond is adequate to complete reclamation. The mine area is zoned Industrial and we plan to file a Technical Revisions to request a bond reduction to leave the floor as graveled area in the near future.
21. Attached is a copy of the groundwater monitoring data collected thru May 2018 for the site. Permit called for only 8 quarters. There is not exposed ground water in the mine.
22. Please refer to the 2018 Annual Report Map for location of the areas of disturbance in the mine.
