**Sunday Mine – Permit No. M-1977-285**

Per our meeting on March 28<sup>th</sup>, the DRMS expressed concerns of the stock pile at the Sunday Mine, requesting that Pinon Ridge characterize the waste rock. Pinon Ridge Mining has agreed to sample the surface waste rock pile. We will be using an XRM hand held unit. The concerned area will consist of 40 x 40 ft. blocks, taking five different samples in each of those blocks to get an average of the value of grade.

Pinon Ridge will commence the project early October. The project will be completed and the findings submitted by the end of the month.
