

Notes:

9. No new mining took place this year. Material was removed from stockpiles this year. When more material is needed, mining will resume in the stripped and partially mined area shown on the map.

13. Approximately 0.30 acres or 270 linear feet of sloping is completed on the west and north sides of the mine. No other reclamation is required at this time.

15. We estimate there is 40,000 cu-yds of topsoil/overburden is stockpiled on the mine at this time. No new exterior slopes were mine so no sloping is required. The maximum amount of disturbance allowed at the mine is 9.99 acres.

19. The bond is currently \$22,000.00 which is more than enough to cover reclaiming the 5.73 acres disturbed. It was revised in August 2014 to this amount.
