

Douglas County Sand and Gravel
M 1983-089

November 9, 2018

Significant changes to the site in 2018,

The large Topsoil Pile on the South end has been moved to the North end

of the site.

The largest Pond on the west has been filled and closed.

The East pond will be used for plant water and recycle and settling, this is
a 2 compartment pond.

The entire South End of the site has been cleaned and graded and

will be utilized by the CDOT Contractor for the I 25 Gap Project, mainly for
parking and temporary storage. This is an area of about 8 Acres.

This is virgin ground and may be mined after the Gap Project is completed
in approximately 3 Years.

The smaller pit area will be moving south as was always planned. The
remaining hole on the North corner is being used to place the overburden
clay from the advance to the South.

The site has been cleaned considerably with much old equipment removed.

No change to the office. The Roads are much the same.
