Peter,

Sorry for taking so long to respond. We were waiting for more information from our superiors. Yes I would like to withdraw the technical revision at this time to re-write a new TR. I have downloaded a copy of the application and have discussed to some degree with upper management. It sounds like there is some interest from other brick companies. Not certain how serious at this time.

Thank you,

Rob Tibbetts

2/15/2019 Stevens Mine Permit M1996064

1. Exhibit D – Mining Plan: Acme is asking that the allowable disturbed area be increased from 20.8 acres to 26 acres. This additional acreage would allow for on-site material to be used in conjunction with the overburden stock piles to backfill the pit area. Thus, possibly eliminating the need to import fill material. The new affected area would be in the northwest quarter of the permitted area.

Rob,

What is proposed on the map can not be done through the technical revision process. You would be required to amend the permit application to add additional disturbed acreage to the permit area. All aspects of the permit would need to be updated and you would need to go through the public notice process.

Please let me know if you would like to withdraw the technical revision or would like more information on the amendment process.
