Jared,

I am delighted to notify you that we have completed the bank stabilization as required by the Division. Please see attached memo and photo documentation for additional details. Also, please let me know if you require any additional documentation.

We have a contractor ready to seed the affected areas next week if the soil conditions are amenable.

Thanks again for your guidance, support and patients while working with us. Although the project was a bit tricky, the end result was outstanding and our golf course staff really liked the final outcome. If you need any of the original photos for your files let me know as well and I can provide those to you.

Sincerely,

Kurt Carlson, MAS

Regional Park Manager

Subject: Re: Debetz Pit Schedule - M-1977-283

The Division will extend the corrective action cited in the December 20th, 2017 inspection report to March 29, 2019. Please let me know if you have any other questions.

Thanks,

Jared

MEMORANDUM

TO: Division of Reclamation Mining and Safety (DRMS)
FROM: Kurt Carlson, Regional Park Manager *KAC*
RE: Completion of Required Corrective Action Items - Debetz Pit
Permit number M-1977-283
DATE: 03/21/2019

As required by DRMS, this memo will verify through photo documentation, that Adams County (Operator) has completed all DRMS required shoreline erosion stabilization that was present at the December 20, 2017 inspection. The areas required to be repaired and previously approved by the DRMS through TR02 have all been properly reconstructed and stabilized to prevent further erosion damage.

This memo serves as a formal response to a corrective action request that emanated from the December 20, 2017 report. A corrective action deadline extension request was submitted by Adams County and approved through email correspondence with Jared Ebert on 09/11/2018. This extended the Corrective Action completion deadline to March 29, 2019.

The following photo documentation in this report shows how the shoreline destabilization that was observed on December 20, 2017 along the western pond slopes was repaired and stabilized in order to prevent future erosion damages. Due to recent weather events soil conditions are too muddy to complete the seeding. However, we hope to have the seeding completed by next week or early April. Seeding will be completed on the northernmost area and the areas where soils and materials were stockpiled. The rip rap areas shouldn't require any seeding as the contractor was very careful not to disturb adjacent areas while placing rip-rap.

If you need any additional information please don't hesitate to contact me and I will get you whatever you need for your files.
