

Adequacy Review #2 for Project PJ

- 1) I'm in the final stage of negotiating temporary access through the property owned by John and Marie Brock. Their property is located at 3315 Trail Creek Rd. It has direct access to the road we are currently locked out of. If for any reason I can not gain temporary access, no mining will be conducted until I have been permitted to create permanent access.
- 2) I'm working with the USFS to figure out the best location to cut a new road for permanent access. It looks like it will be from a trail that connects to FS 201. It is the shortest and most direct route. Once we have been approved by USFS, I will file an amendment to reduce the size of Area #3, so that we stay within the approved permitted acreage. (See attached)
- 3) I accept the divisions bond requirements and will put up the required \$21,000 prior to any work being done.
- 4) I commit that the total amount of overburden (waste rock) that needs to be backfilled at the site will not exceed 10,000 cubic yards. I also commit to having no more than 1 acre of topsoil needing to be replaced at one time.
- 5) I to commit to informing the USFS of any revisions to the operation once the Division approves your application.
- 6) I will provide proof of filling these changes with the County Clerk.

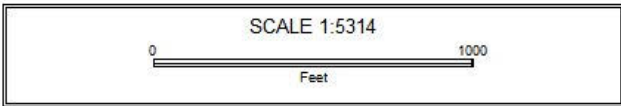

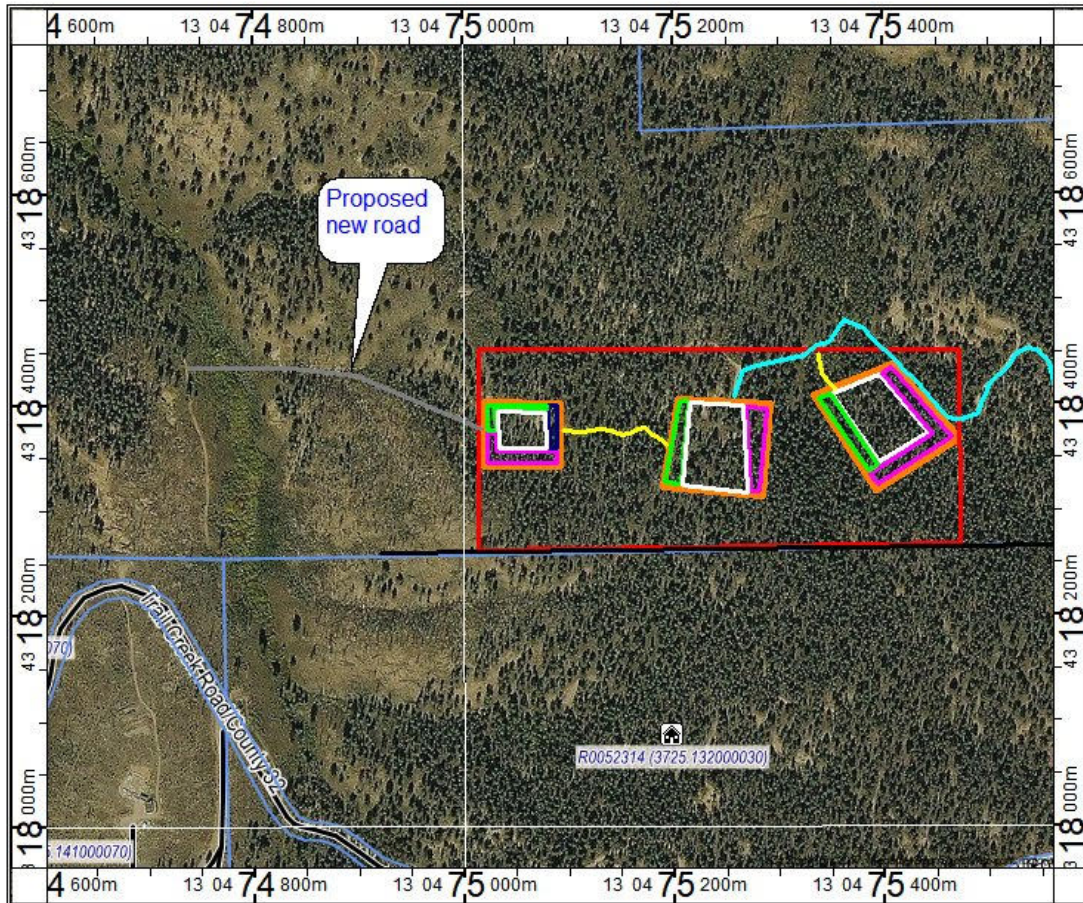

Adequacy Review #2 and Bond Calculation M2018007

Hi Elliott,
Attached is my response to the adequacy review. I will provide proof of filing with Teller County tomorrow. I will also mail you a hard copy.

Thanks,
Taylor Conway
