 Section
 River
 Intermittent Stream

2013 noxious weed treatment was conducted on approximately 50 acres at the Sunday Mines Complex.

In May and June of 2013, noxious weed spraying was done along the road ways and around the surface facilities at each mine. The treatment targeted halogeton, Russian knurweed, and Russian thistle. See the attached for specifics on the control treatment type and amount applied at the site.

Coordinate System: NAD 1983 StatePlane Colorado South
