Hello Jared, we hope this day finds you doing well. Maps and Drawings 4. C area photograph that I provided to D.R.M.S. for the mining site had indications of previous workings which dates back to early 1900's. This information I found in the Denver archives. Leslie McFadden brought a archaeologist Larry. Fullenkamp he was with Leslie on mine site he confirmed on August 23rd 2017 there was no concern about historical values. E. My response; the division is correct on features that currently exist at St. Marys Mine. There is earlier mining evidence that has gone on before we got the claim, which is adit entrances, rail metal, processed tailing's, waste dump, and trench dig. The division assumes right these features do currently exist at the site

Project Description: 10. Item #6 On a previous conversation by phone Jason Smith, Water Resource Division told me he would come to the mining site to see what we are proposing to do with the water on the site. Jason also told me to let him know when we will be on the mining site so he can get a visual look on how we are using the water and how we are putting it back in the stream. In regards to part K; there is a very small stream of water runoff that we are looking to use in the process of using with the high banker, according to Jason Smith he replied we are only borrowing the water from the stream and he understands we are putting it back; B, response we will have to obtain approval from Jason Smith of CO Div of Water Resource for the use of the water, when Jason shows up at the mining site we hope to get approval then according to Jason. Smith.

Sincerely, Randy & Christine. Ross.
