Tim,

Yesterday at 3:00 pm a 375-gallon release of ammonium nitrate was reported at the Buckley Plant on site. The release was caused when the contractor released an external valve after the line became plugged during the offloading process. The impacted soil was excavated and placed on a blast-stemming pile. The CC&V team will be investigating the event to address the root cause.

Please contact me if you have any questions.

Thanks, Katie
