Hi Tim,

Yesterday afternoon at 4:30 pm a 2,000-gallon barren solution spill occurred on the liner at CC&V's ADR 2 Facility. The spill occurred when a barren solution pump malfunctioned, causing the barren solution tank to fill faster than the remaining pumps could pull solution out of the tank and up to the leach pad. CC&V personnel quickly addressed the problem with the pumps to balance flow across the plant. All solution remained on the liner and quickly reported to the PSSA.

Please contact me if you have any questions.

Thanks, Katie

Katie Blake
