Amy –

We sent out the attached structure owner letters with the attached drawings today. I will send over the certified mail receipts as soon as we get them back from the post office.

Regards,

J.C.

Re: Agreement for Compensation for Damage to Structures within 200 feet of mining activities

To Whom It May Concern:

J-2 Contracting Co. Inc. has a State of Colorado Division of Reclamation, Mining, and Safety (DRMS) Reclamation Permit application under review (M-2019-028) to allow sand and gravel mining on property within 200 feet of structures owned by Weld County. The Colorado Mined Land Reclamation Act provides protection for your property, and specific protection for your structures located within 200 feet of the mining activities. The roads, Right-of-Ways, and concrete ditch as shown on the attached map are the structures that are within 200 feet of the mining activities.

DRMS Permit approval requires a notarized agreement between the applicant and owners of structures within 200 feet of the mining activities, providing compensation for any damage to the structure; or preparation of an engineering evaluation acceptable to the DRMS, demonstrating that such structure(s) shall not be damaged by the mining activities if an agreement cannot be reached.

J-2 Contracting Co. has had an engineering evaluation performed to determine acceptable setbacks from their proposed mining permit boundary and mining limit to structures adjacent to the mining. The proposed mining slopes and setbacks were analyzed using the Galena 7.0 computer program. Galena 7.0 was designed to analyze the slope stability of earth embankments subjected to several critical situations that may occur during the life of the embankment. The procedure searches for circular shear failures and automatically searches for the lowest safety factor. The required minimum safety factors are based on the current standards used by the Colorado State Engineer's Office (SEO) for high hazard embankment dams, and industry accepted standards for the evaluation of embankments during construction. The safety factors attained using the setbacks shown on the Mining Plan are greater than the required safety factors specified by the SEO for an earth embankment during construction, and an earth embankment subjected to earthquake loading, based on the United States Geological Survey earthquake peak acceleration factors for the area. This evaluation indicated that damage to structures adjacent to the mining should not occur, even during earthquake conditions, which are very unlikely to be present.

With this letter, J-2 Contracting Co., requests your authorization to conduct mining and reclamation activities within 200 feet of your structure(s). In return for this authorization, J-2 Contracting Co. agrees to provide fair compensation for any damage to your structure(s) resulting from its mining and

Re: Agreement for Compensation for Damage to Structures within 200 feet of mining activities

To Whom It May Concern:

J-2 Contracting Co. Inc. has a State of Colorado Division of Reclamation, Mining, and Safety (DRMS) Reclamation Permit application under review (M-2019-028) to allow sand and gravel mining on property within 200 feet of structures owned by Mathews Family Enterprises. The Colorado Mined Land Reclamation Act provides protection for your property, and specific protection for your structures located within 200 feet of the mining activities. The fence as shown on the attached map are the structures that are within 200 feet of the mining activities.

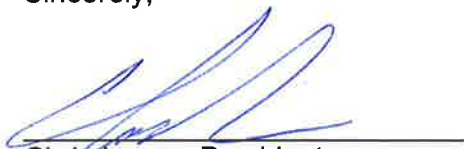

DRMS Permit approval requires a notarized agreement between the applicant and owners of structures within 200 feet of the mining activities, providing compensation for any damage to the structure; or preparation of an engineering evaluation acceptable to the DRMS, demonstrating that such structure(s) shall not be damaged by the mining activities if an agreement cannot be reached.

J-2 Contracting Co. has had an engineering evaluation performed to determine acceptable setbacks from their proposed mining permit boundary and mining limit to structures adjacent to the mining. The proposed mining slopes and setbacks were analyzed using the Galena 7.0 computer program. Galena 7.0 was designed to analyze the slope stability of earth embankments subjected to several critical situations that may occur during the life of the embankment. The procedure searches for circular shear failures and automatically searches for the lowest safety factor. The required minimum safety factors are based on the current standards used by the Colorado State Engineer's Office (SEO) for high hazard embankment dams, and industry accepted standards for the evaluation of embankments during construction. The safety factors attained using the setbacks shown on the Mining Plan are greater than the required safety factors specified by the SEO for an earth embankment during construction, and an earth embankment subjected to earthquake loading, based on the United States Geological Survey earthquake peak acceleration factors for the area. This evaluation indicated that damage to structures adjacent to the mining should not occur, even during earthquake conditions, which are very unlikely to be present.

With this letter, J-2 Contracting Co., requests your authorization to conduct mining and reclamation activities within 200 feet of your structure(s). In return for this authorization, J-2 Contracting Co. agrees to provide fair compensation for any damage to your structure(s) resulting from its mining and

reclamation activities. Your notarized signature below grants permission for J-2 Contracting Co. to conduct mining and reclamation activities within 200 feet of your structure(s), and acknowledges J-2 Contracting Co.'s commitment to provide fair compensation for any damages to said structure(s) caused by J-2 Contracting Co.'s mining and reclamation activities.

Sincerely,

Chris Leone, President
J-2 Contracting Co.

Re: Agreement for Compensation for Damage to Structures within 200 feet of mining activities

Dear Mr. Goza,

J-2 Contracting Co. Inc. has a State of Colorado Division of Reclamation, Mining, and Safety (DRMS) Reclamation Permit application under review (M-2019-028) to allow sand and gravel mining on property within 200 feet of structures owned by you. The Colorado Mined Land Reclamation Act provides protection for your property, and specific protection for your structures located within 200 feet of the mining activities. The fence, building, shed, and mailbox as shown on the attached map are the structures that are within 200 feet of the mining activities.

DRMS Permit approval requires a notarized agreement between the applicant and owners of structures within 200 feet of the mining activities, providing compensation for any damage to the structure; or preparation of an engineering evaluation acceptable to the DRMS, demonstrating that such structure(s) shall not be damaged by the mining activities if an agreement cannot be reached.

J-2 Contracting Co. has had an engineering evaluation performed to determine acceptable setbacks from their proposed mining permit boundary and mining limit to structures adjacent to the mining. The proposed mining slopes and setbacks were analyzed using the Galena 7.0 computer program. Galena 7.0 was designed to analyze the slope stability of earth embankments subjected to several critical situations that may occur during the life of the embankment. The procedure searches for circular shear failures and automatically searches for the lowest safety factor. The required minimum safety factors are based on the current standards used by the Colorado State Engineer's Office (SEO) for high hazard embankment dams, and industry accepted standards for the evaluation of embankments during construction. The safety factors attained using the setbacks shown on the Mining Plan are greater than the required safety factors specified by the SEO for an earth embankment during construction, and an earth embankment subjected to earthquake loading, based on the United States Geological Survey earthquake peak acceleration factors for the area. This evaluation indicated that damage to structures adjacent to the mining should not occur, even during earthquake conditions, which are very unlikely to be present.

With this letter, J-2 Contracting Co., requests your authorization to conduct mining and reclamation activities within 200 feet of your structure(s). In return for this authorization, J-2 Contracting Co. agrees to provide fair compensation for any damage to your structure(s) resulting from its mining and
