Tim,

Today, at approximately 2:30pm we had a spill of process ore thickener at the Mill. A power bump caused a communication error, resulting in a backflow of solution, overtopping a tank interior to the Mill, spilling approximately 200 gallons of process solution out of an overhead door. All solution remained over the mill liner. The impacted material was over-excavated and placed on the mill feed pile.

A formal 5-day notification will be provided to the division in accordance with Rule 8.

Please let me know if you have any questions

Thank you,

Justin Bills
