

To whom it may concern,

As of 11/11/19 activity on M2018027 is as follows:

1. The approximately 12 acres of land on the east side of hi-way 85 has been excavated, soil relocated and liner installed to create Hunt Reservoir # 1. Reclamation of the soil storage area on the South end of the parcel will begin after the last soil is removed.
2. The approximate 3 acres of soil was moved and used to construct the Augmentation pond in the NW corner of the property. Reclamation will continue and should be completed at the same time 1 is done
3. Fines were mined by the contractor building the slurry wall and utilized in building the slurry wall. This is an approximate 15 acre area on the NE portion of the Slurry Wall containment area.
4. The Slurry wall construction area which is a 100 foot wide disturbance of the top soil of approximately 6000 feet in circumference is still under construction.
