**Re: Loloff Construction, Inc.; Loloff Pit; Permit No. M-1985-112;
Technical Revision No. 3 (TR-03) Adequacy Review**

Mr. York:

The Division of Reclamation, Mining and Safety (Division/DRMS) reviewed the content of the technical revision (TR-03) for the Loloff Pit submitted on June 16, 2020 and submits the following comments. The Division is required to make an approval or denial decision no later than July 16, 2020 therefore; a response to the following adequacy review concerns should be submitted to the Division as soon as possible.

1. Please state the average thickness of replaced topsoil on the reservoir slopes. The approved Reclamation Plan states 6 to 12 inches of topsoil will be replaced during reclamation. Please revise the Reclamation Plan Map accordingly.
2. Please provide the design specifications for the Hard Surface Structural Fill Area. Please include the depth of structural fill and methods of placement and compaction at minimum.
3. Please provide the design specifications for the Perimeter Road Aggregate Base Coarse Surface Area. Please include the depth of aggregate base and the methods of placement and compaction at minimum.

Please be advised the technical revision for the Loloff Pit may be deemed inadequate, and the revision may be denied on July 16, 2020, unless the above mentioned adequacy review items are addressed to the satisfaction of the Division.

If you have any questions, please contact me at peter.hays@state.co.us or (303) 866-3567 Ext. 8124.

Sincerely,

A handwritten signature in blue ink, appearing to read 'P. Hays', with a long horizontal flourish extending to the right.
