Keenesburg Mine Second Quarter 2020 Pest & Disease Inspection

On June 22, 2020 operational, bonded reclaimed and shop areas at the Keenesburg Mine were inspected for plant pests, plant diseases and noxious weeds that could or have affected establishment of vegetation on reclaimed lands. The following areas were inspected:

- Office/shop/facility area;
- Topsoil stockpiles;
- Bonded reclamation;
- Permanent sediment ponds;
- Mine roads; and
- Undisturbed land within the permit boundary.

These areas are depicted on Map 1.

Plant pests or diseases were not observed within the areas inspected. The vegetation has not been adversely affected by plant pests. Areas affected by infestation or blight were not identified during this inspection. No areas were observed where noxious weeds, plant pests or plant disease had adversely impacted the normal growth and establishment of vegetation on reclaimed lands. There was noticeable growth of cheatgrass in some areas this spring; pre-emergent treatment should be conducted later in the year in these areas.
