

Roughly 510 flowering Mediterranean Sage plants were removed on June 5, 2020. The following Best Practice was used for removal:

1. Sever flowering plant at it's base (2-3 below soil level if possible)
2. **Carefully** transfer plant to a black trash bag
3. Collect any stems, flowers or seeds dislodged during removal and place in the bag
4. Keep track of the number of flowering plants collected
