RE: Ragsdale Reservoirs, DRMS File No. M-2020-007;  
TR-01, Site Specific Data Review - September 9, Technical Revision Request  
to Resolve Conditional Approval

---

The Division of Reclamation, Mining and Safety (DRMS) engineering staff has reviewed the September 9, 2020 Technical Revision Request to Resolve Conditional Approval submitted by L.G. Everist with site specific data provided by Deere & Ault.

The sample locations and samples analyzed are consistent with what was agreed upon during the July 1, 2020 meeting. The Laboratory Test Results support the use of the strength parameters used in the June 5, 2020 Cannon Lands Slope Stability Technical Memorandum by Deere & Ault. The stipulation requiring the Applicant to conduct a geotechnical analysis utilizing site-specific data to verify the factors of safety presented in the application, and submit the geotechnical report to the Division should be considered resolved.
