MLRD BOARD - status review and request for a modification of ordered corrective action

- TR has been submitted
 - sand has been characterized-division is evaluating report
- Amendment
 - am asking for a time extension
 - am asking for mining and milling to be considered separately
 - am asking for the cease and desist order to be modified-allow exploration mining

Discussion: a plan for processing ore should wait for a determination on the existing tailings, as of 11/4/2020 this is pending. All test work seeking processing options have been slowed by the general covid slow down. More time is needed to develop a milling plan, and file an amendment.

General under ground mining was not part of the violation-this is a permitted activity, would like to resume exploration mining-tunneling and under ground drilling.

Will be NO MILLING until all issues are fully resolved.
