

**E. Other Disturbances (please describe)**

No disturbances other than the drill holes are anticipated

Operations will only be conducted during day time as to

miniimize noice and light disturbance

**F. Indicate Chemicals and Fuels used or stored on site. List type, quantity and method to store.**

No chemicals will be stored on site. All chemical necessary for rig and vehiclesoperations will be stored in support vehicles.

MSDS sheets used for the operation are in attachement 2

**G. New Roads:**

Length (ft): \_\_\_\_\_ Width (ft): \_\_\_\_\_

**Significantly  
Upgraded Roads**

Length (ft): \_\_\_\_\_ Width (ft): \_\_\_\_\_

**Are culverts or other crossings proposed? If so, please describe:**

No culverts annd crossings are anticipated

**H. Total project area to be disturbed (acres)** \_\_\_\_\_ <0.25 acres

**I. Describe the equipment to be used for the prospecting operations:**

Drill rif, front end loader, water truck and Pick ups

J. Describe and locate any structures to be constructed (i.e. stockpiles, ponds, impoundments):

---

---

---

K. Describe anticipated relationship to surface water and groundwater (proximity to streams, penetration of ground water aquifers):

There is no surface water on the property

---

The closest permanent body of water is the De Weese  
reservoir, 7km due north

---

---

**IV. OPERATION AND RECLAMATION MEASURES:**

1. The Board suggests that a photographic record of the pre-prospecting and post-prospecting conditions be kept by the prospector. These photos should be taken from the same location and by the same method to clearly show the pre-prospecting condition of the land and the reclamation efforts. Upon completion of reclamation and request for bond or surety release, the Board may consider the photos as evidence of adequate reclamation, and thus be able to act more quickly on the request for release.
2. Provide a description of the native vegetation of the area to be disturbed, including tree, shrub, and grass communities of the area. Color photographs, sufficient to adequately represent the ecology of the site and adequately labeled (including date, orientation and location), may be used in lieu of a written description. Based on the quality of the photographs, the Division may require additional detail.

Sagebrush, short sparse grass and cactus are  
the main vegetation. there are no trees.

---

If any pits are dug they will be re-contoured to  
original topography.
